| II. Health information   | II.a. Certificate reference number | II.b. |
|--|------------------------------------|-------|
| <p>(<sup>1</sup>) either [II.2.2. originated from the territory of the country of export which was on the day of admission into the centre free of vesicular stomatitis for 6 months,]</p>   |                                    |       |
| <p>(<sup>1</sup>) or [II.2.2. were tested by a virus neutralisation test for vesicular stomatitis in a blood sample taken on .....(<sup>4</sup>), this being within 14 days prior to entering the centre, with negative result at serum dilution of 1 in 12;]</p>  |                                    |       |
| <p>II.2.3. originated from holdings which on the day of admission onto the centre fulfilled the requirements of point II.1.3;</p>  |                                    |       |
| <p>II.3. The semen described above was collected from donor stallions, which:</p>  |                                    |       |
| <p>II.3.1. on the day the semen was collected have not shown clinical signs of an infectious or contagious disease,</p>  |                                    |       |
| <p>II.3.2. during at least 30 days prior to collection of the semen have not been used for natural service,</p>  |                                    |       |
| <p>II.3.3. during the last 30 days prior to collection of the semen have been kept on holdings where no equine animal showed clinical signs of equine viral arteritis,</p>   |                                    |       |
| <p>II.3.4. during the last 60 days prior to collection of the semen have been kept on holdings where no equine animal showed clinical signs of contagious equine metritis,</p>   |                                    |       |
| <p>II.3.5. to the best of my knowledge and as far as I could ascertain have not been in contact with equidae suffering from an infectious or contagious disease the 15 days immediately preceding the collection of the semen;</p>   |                                    |       |
| <p>II.3.6. have undergone the following animal health tests carried out in a laboratory recognised by the competent authority, in accordance with a test programme as specified in point II.3.7:</p>   |                                    |       |
| <p>II.3.6.1. an agar-gel immuno-diffusion test (Coggins test) for equine infectious anaemia with negative result (<sup>3</sup>);</p>   |                                    |       |
| <p>(<sup>1</sup>) either [II.3.6.2. a serum neutralisation test for equine viral arteritis with negative result at a serum dilution of 1 in 4;]</p>  |                                    |       |
| <p>(<sup>1</sup>) or [II.3.6.2. a virus isolation test for equine viral arteritis carried out with negative result on an aliquot of the entire semen;]</p>   |                                    |       |
| <p>II.3.6.3. a test for contagious equine metritis carried out on two occasions with an interval of 7 days by isolation of <i>Taylorella equigenitalis</i> from pre-ejaculatory fluid or a semen sample and from genital swabs taken at least from the penile sheath, urethra and from the urethral fossa with negative result in each case;</p> |                                    |       |
| <p>II.3.7. have been subjected to one of the following test programmes (<sup>5</sup>):</p>   |                                    |       |
| <p>II.3.7.1. The donor stallion was continuously resident on the collection centre for at least 30 days prior to the semen collection, and during the collection period, and no equidae on the collection centre came during that time into direct contact with equidae of lower health status than the donor stallions.</p>                     |                                    |       |
| <p>The tests required in point II.3.6 have been carried out on samples taken on ..... (<sup>4</sup>) and on ..... (<sup>4</sup>), at least 14 days after the commencement of the above residence period and at least at the beginning of the breeding season;</p>  |                                    |       |

**Part II:**

- (<sup>1</sup>) Delete as necessary.
- (<sup>2</sup>) Imports of equine semen are authorised from a third country listed in column 2 of Annex 1 to Commission Implementing Regulation (EU) 2018/659 provided the semen was collected in the part of the territory of the third country detailed in column 4 of that Annex from a donor stallion of the category of equidae indicated in columns 11, 12 or 13 of that Annex.
- (<sup>3</sup>) The agar gel immunodiffusion test (Coggins test) or the ELISA for equine infectious anaemia are not required for donor equidae which have continuously resided in Iceland since birth, provided that Iceland has remained officially free of equine infectious anaemia and no equidae and their semen, ova and embryos have been introduced into Iceland from outside prior to and during the period the semen was collected.
- (<sup>4</sup>) Insert date.
- (<sup>5</sup>) Cross out the programmes that do not apply to the consignment.
- (<sup>6</sup>) Council Directive 2009/156/EC of 30 November 2009 on animal health conditions governing the movement and importation from third countries of equidae.
