I.21		I.22. Quantity of packages	
I.23. Identification of container/seal number		I.24	
I.25. Commodities certified for <input type="checkbox"/> Breeding <input type="checkbox"/> Fattening <input type="checkbox"/> Slaughtering			
I.26		I.27. For import or admission to the EU <input type="checkbox"/>	
I.28. Identification of animals			
Species (scientific name)	Identification system	Identification number	Age Sex

II. Health information

II.a. Number of certificate

II.1. Public health attestation

I, the undersigned official veterinarian, certify that the animals described in this certificate meet the following requirements:

II.1.1. The animals originate from holdings which were not under official restrictions due to:

- brucellosis and tuberculosis during the past 42 days,
- anthrax during the past 30 days,
- rabies during the past six months.

and they were not in contact with animals from holdings which did not meet these requirements.

II.1.2. The animals were not treated with

- any stilbene (1,2-Diphenylethen) or thyrostatic substances
- oestrogenic, androgenic, gestagenic or beta-agonist substances for other than therapeutic or zootechnic treatment (as defined by Council Directive 96/22/EC).

II.2. Animal health attestation

I, the undersigned official veterinarian, certify that the animals described in this certificate meet the following requirements:

II.2.1. They come from the territory with code US (United States of America) which, at the date of issuing this certificate:

- a) has been free for 24 months from foot and mouth disease, for rinderpest, Rift Valley fever, and contagious caprine pleuropneumonia for 12 months, and for six months for vesicular stomatitis (alternately, if the territory is not free of vesicular stomatitis for six months, laboratory results can be submitted which show that the animals are free of vesicular stomatitis),

and

- b) where during the last 12 months did not allow vaccination against the above-mentioned diseases and the import of even-toed ungulates which were vaccinated against these diseases is forbidden.

II.2.2. The animals meet the following requirements:

They were kept since birth in the region described under point II.2.1. without contact with even-toed ungulates or were imported into this region less than six months previously,

II.2.3. They were kept from birth in the holding/institution⁽¹⁾ described in points I.11 and I.13 which meet the following requirements:

- a) Within a radius of 150 km of the holding/institution, there was no incidence or case/outbreak of bluetongue and epizootic haemorrhage during the last 60 days, and
- b) Within a radius of 10 km of the holding/institution, there was no incidence or case/outbreak of another disease which was mentioned under point II.2.1 during the last 40 days.

II.2.4. There are no animals which are to be killed as part of a national disease control program nor have they been vaccinated against diseases mentioned under point II.2.1., and

⁽²⁾ they were subjected during last 30 days to an intradermal tuberculin test and they were not vaccinated against brucellosis,

⁽²⁾ they were tested during last 30 days with a tube/serum agglutination test where the brucellosis titer was less than 30 IE/ml,

II.2.5. As far as I know and according to written confirmation by the owner of the animals, they meet the following requirements:

a) They do not originate from holdings/institutions and did not come into contact with animals from institutions where there were clinical signs of the following diseases:

- i) Contagious agalactia of sheep and goats (*Mycoplasma agalactiae*, *Mycoplasma capricolum*, *Mycoplasma mycoides* var. *Mycoides* "large colony") during the last six months,
- ii) Paratuberculosis and Lymphadenitis caseosa during the last 12 months,
- iii) Pulmonary adenomatosis during the last 3 years, and
- iv) Maedi/Visna or viral arthritis/encephalitis of goats

⁽³⁾ either [during the last 3 years.]

⁽³⁾ or [during the last 12 months, and all animals which were infected were killed and the remaining animals were tested twice with negative results within an interval of six months.]

b) There is an official epidemic notification system, and

c) During the three years prior to export, they are free of clinical or other signs of tuberculosis or brucellosis.

II.2.6. The animals were tested with blood samples which were taken at the beginning of the quarantine and not before 28 days after on and on with a PCR test for bluetongue and epizootic haemorrhagic disease with negative results. The second sample was taken during 10 days prior to export.

II.2.7. They will be sent from the institution mentioned in points I.11 and I.13 directly to the EU, and until their dispatch, they

a) did not come into contact with even-toed ungulates with at least the same health requirements as described in this certificate, and

b) were not kept in places where there was, within a radius of 10 km, a case/outbreak of a disease mentioned in point II.2.1 during the last 30 days.

- II.2.8. The means of transportation and containers for the animals have been cleaned and disinfected with an officially approved disinfectant before loading.
- II.2.9. The animals were examined by an official veterinarian 24 hours before loading and showed no clinical signs of disease.
- II.2.10. They were loaded on _____⁽³⁾ for dispatch to EU in the means of transport described under point I.15 above that were cleaned and disinfected before loading with an officially approved disinfectant. Faeces, urine, litter or fodder could not flow or fall out of the vehicle or container during transportation.

II.3. Animal transport attestation

I, the undersigned official veterinarian, certify that the animals described above have been treated before and at the time of loading in accordance with the relevant provisions of Regulation (EC) No 1/2005, in particular as regards watering and feeding, and they are fit for the intended transport.

II.4. Specific requirements

II.4.1. According to official information, no clinical or pathological evidence of infectious bovine rhinotracheitis (IBR) has been recorded in the holding(s) of origin referred to in box reference I.11 and I.13 during the last twelve months.

II.4.2. The animals referred to in box reference I.28 meet the following requirements:

They have been isolated in accommodation approved by the competent authority for the immediately prior to dispatch for export.

II.5. Regarding chronic wasting disease (CWD):

The animals were kept continuously from birth in holdings in which, and within a radius of 50 km around these holdings, there was never detection of a case of chronic wasting disease.

Notes

After importation, the animals must be conveyed without delay to the holding of destination where they shall remain for a minimum period of 30 days before further movement outside the holding.

Part I

Number I.15: Registration number (railway carriages, containers and lorries), flight number (aircraft) or name (ship) is to be provided. In case of unloading and reloading, the consignor must inform the BIP of entry into the Union.

Number I.19: Choose the correct HS-Code: 01.02, 01.04.10, 01.04.20 or 01.0619.

Number I.23: For containers or boxes, the container number and the seal number should be included.

Number I.28: Identification system: Specify the identification system (such as ear tag, tattoos, brand, chip, transponder). The ear tag has to show the ISO-code of exporting country. The individual number must permit tracing of their premises of origin.

Number I.28: Age (in months)

Number I.28: Sex (M = male, F = female, C = castrated).

Part II

(1) Delete as appropriate.

(2) Negative laboratory results for particular diseases in Annex I Part 3.C of Decision 79/542/EEC. A positive tuberculin test includes a swelling or thickness of a skin fold by 2 mm or more or clinical signs like oedemas, exudations, necrosis, sensitivity to pain and/or inflammation.

(3) Date of loading.
