Certification Statements:

I, the undersigned USDA Accredited Veterinarian, certify to the following statements:

1. The United States is free of foot-and-mouth disease (FMD) and classical swine fever (hog cholera). No vaccination is practiced against these diseases in the United States.

2. Either the United States is free of African swine fever (ASF, a.k.a. African hog cholera) in accordance with OIE Terrestrial Animal Health Code, or the animals for export originate from premises located in a zone free of ASF per the OIE Code.

3. The animals for export originate from premises where there have been no clinical cases of the following diseases for the last 12 months prior to export: swine brucellosis, porcine reproductive and respiratory syndrome (PRRS), pseudorabies (Aujeszky's disease), porcine viral encephalomyelitis (Teschen disease), swine vesicular disease, trichinellosis, and transmissible gastroenteritis (TGE).

4. The animals for export originate from a validated swine brucellosis-free herd or a swine brucellosis-Free state as determined by APHIS.

5. The animals for export originate from a qualified pseudorabies-negative (QN) herd or a pseudorabies-Free (Stage 5) state as determined by APHIS and have not been vaccinated against pseudorabies.

6. The animals for export have not received any stilbene or thyrostatic, oestrogenic, androgenic, gestagenic or b-agonist substances for purposes other than therapeutic or zootechnic treatment.

7. After due inquiry, I am satisfied that the swine to be exported have never been fed garbage at any time, nor have they been fed any animal feed containing proteins derived from ruminants, except the components recommended by the OIE Terrestrial Animals Health Code.

8. The animals for export have been isolated for a minimum of 30 days prior to shipment in a facility approved by the USDA accredited veterinarian.

9. The animals for export were inspected by a USDA accredited veterinarian during isolation, and are free of clinical signs of transmissible or contagious disease including anthrax, rabies, atrophic rhinitis, erysipelas, and vesicular stomatitis.

10. The animals for export were tested with negative results during the period of isolation, at a laboratory acceptable to USDA, for the following diseases as outlined below: porcine reproductive and respiratory syndrome (PRRS), transmissible gastroenteritis (TGE) if not vaccinated. Test dates and methods used are noted on the test table.

Certification Statements:

11. Regarding leptospirosis:

[O] The animals for export were treated within 7 days prior to export with long-acting oxytetracycline at a dose effective against *Leptospira* species; OR

[O] The animals for export were test negative for leptospirosis using a microtiter agglutination test for *Leptospira pomona*, *L. hardjo*, *L. grippotyphosa*.

12. During the period of isolation, the animals for export have been treated against endoparasites (helminths).

Name of Product Used: _____

Date of Treatment: _____

13. During the period of isolation, the animals for export have been treated against ectoparasites (blood feeding insects).

This treatment is exempted during the season where it is not suitable for the activity for the blood sucking insects and their vectors. This would be indicated with an "N/A" below.

Name of Product Used: _____

Date of Treatment: _____

14. The means of transportation will be cleaned and disinfected by methods and disinfectants approved by USDA prior to export.
