Certification Statements:

1. The United States is free of Akabane, Contagious Bovine Pleuropneumonia, Foot and Mouth Disease, Rinderpest, Rift Valley Fever, Lumpy Skin Disease, and Theileriosis, Vesicular Stomatitis, Heart Water, and Peste des Petits Ruminants.
2. Regarding bovine spongiform encephalopathy (BSE) the following three statements are made:
 - a) The United States of America is recognized as country with a negligible BSE risk and complies with the conditions referred to in Article 11.4.3 of the Terrestrial Animal Health Code of the World Organization for Animal Health (OIE) 2018.
 - b) Cattle selected for export were born after the date from which the ban on the feeding of ruminants with meat-and-bone meal and greaves derived from ruminants was effectively enforced, and this has been enforced in the whole country for at least 7 years.
3. The cattle selected for export, and the herds from which they originate:
 - a) originate from premises free from animal health restrictions applicable to cattle.
 - b) are located in an area (county) not subject to restrictive measures as a result of disease outbreak to which ruminants are susceptible.
4. The animals originate from premises where there have been no clinical signs of the following diseases for the stated period of time prior to export: Brucellosis (*Brucella abortus* or *Brucella ovis*)- 12 months, Bovine Genital Campylobacteriosis -five (5) years, Bovine tuberculosis (*Mycobacterium bovis*) - three (3) years, Exotic Bovine Leukosis- 2 years, para-tuberculosis (Johne’s disease) – two (2) years, -Rabies, Bluetongue, Vibriosis, Vesicular stomatitis, Maedi Visna, and Q-Fever - one (1) year, Anthrax, Leptospirosis, Contagious Agalactia- six (6) months.
5. The animals for export have resided in the United States of America for at least sixty (60) days.
6. The animals have not been vaccinated for Brucellosis.
7. Each animal underwent pre-export isolation in premises approved by a veterinarian accredited by the United States Department of Agriculture, for at least thirty (30) days immediately prior to the scheduled date of export. Cattle in isolation showed no clinical signs of an infectious disease and did not have contact with ruminants of lesser health status.

Test Requirements

The animals were tested for the following diseases based on OIE requirements, within forty-five (45) days prior to export with negative results:

1. Brucellosis (B. melitensis, B. abortus): BBAT, CFT, I-ELISA or FPA.
2. Bovine tuberculosis (Mycobacterium bovis): intradermal tuberculin test.
3. Enzootic Bovine leukosis: PCR, AGID, or ELISA (PCR must be used for animals 4-6 months of age) Cattle for export were tested on two (2) occasions while segregated from the herd in an isolation unit approved by the USDA accredited veterinarian at an interval of at least 30 days. (the 2nd test is completed in isolation).
4. Paratuberculosis (Johne's disease): Delayed –type hypersensitivity test (DTH) or ELISA.
5. Infectious bovine rhinotracheitis: The animals come from an IBR/IPV free herd; OR; the animals were vaccinated with a killed vaccine between 15 days and no more than 6 months prior to export, OR or were tested via PCR during the isolation period, OR Were tested using ELISA or VN on two (2) occasions with negative results, at an interval of not less than 21 days during the pre-isolation quarantine period.
6. Campylobacteriosis:
The animal is a virgin heifer, OR, One culture of vaginal washings, OR, one culture of preputial washings, OR one culture of semen sample.
7. Trichomoniasis:for animals, which have been mated, direct microscopic examination AND; culture of vaginal mucus or preputial specimens OR PCR of sample of semen.
8. Bluetongue: RT-PCR or virus isolation
9. Leptospirosis: treatment using oxytetracycline at a dose of 22mg/kg on two occasions 14 days apart and dates of treatments stated: _____
10. Bovine Viral Diarrhea: Viral isolation or PCR test, OR The animals were vaccinated with a U.S. approved vaccine between 15 days and no more than 6 months prior to export.
11. Bovine anaplasmosis: PCR, AND treated twice with an effective drug such as oxytetracycline at a dose of 22 mg/kg; Treatments must be at least 7 days apart (leptospirosis treatment above satisfies this requirement), AND treated with an acaricide and, if necessary, a repellent against biting insects prior to shipment and were visibly free of ticks.
