

**VETERINARY HEALTH CERTIFICATE FOR EXPORT OF DAIRY CATTLE
FROM THE UNITED STATES OF AMERICA
TO THE HASHEMITE KINGDOM OF JORDAN**

I. IDENTIFICATION

RESPONSIBLE MINISTRY: United States Department of Agriculture (USDA)

COMPETENT AUTHORITY: Animal and Plant Health Inspection Service (APHIS),
Veterinary Services (VS)

NAME AND ADDRESS OF CONSIGNOR:

NAME AND ADDRESS OF CONSIGNEE:

IDENTIFICATION OF CATTLE

No.	Breed	Sex	Age (months)	Identification (ear tag, tattoo, micro-chip, RFID)
1				
2				
3				
4				
5				

*If more space is needed, a chart can be created and attached as part of the certificate.

II. ANIMAL HEALTH CERTIFICATIONS:

I, the undersigned USDA accredited veterinarian, certify to the following statements.

1. The United States is free of bovine babesiosis, contagious bovine pleuropneumonia, foot and mouth disease, rinderpest and screwworm.
2. The United States is recognized by the World Organization for Animal Health (OIE) as a country with controlled risk of bovine spongiform encephalopathy (BSE).
 - a. The US applies all measures according to OIE recommendations and complies with the conditions referred to in Article 11.5.4.
 - b. The cattle selected for export are identified by a permanent identification system in such a way as to demonstrate that they are not exposed cattle as described in point 3b) of Article 11.5.4.
 - c. The cattle selected for export were born after the date from which the ban on the feeding of ruminants with meat-and-bone meal and greaves derived from ruminants was effectively enforced.
3. The animals originate from premises in which no cases of anthrax, bluetongue, bovine genital campylobacteriosis or rabies has occurred for the 6 months prior to export.
4. The animals originate from states in which no case of vesicular stomatitis has been reported for the 3 months prior to export.

5. The animals were vaccinated against leptospirosis, infectious bovine rhinotracheitis/infectious pustular vulvovaginitis (IBR/IPV), parainfluenza and other respiratory complex diseases (e.g., shipping fever) not less than one (1) month and not more than six (6) months prior to export.
6. The animals were isolated for at least 21 days prior to export.

III. TEST REQUIREMENTS:

The cattle must be tested with negative results for the diseases listed below once during isolation except for Tuberculosis (TB) where testing must be completed within 90 days of export. (Mark through the non-applicable testing option.)

1. TB: Intradermal test using bovine PPD tuberculin.
Test date(s) _____
OR other test authorized by USDA
2. Brucellosis: Complement fixation test at a 1:10 dilution **OR** buffered Brucella antigen test (i.e., card test) **OR** Enzyme-linked immunosorbent assay (ELISA) or standard tube test **OR** plate agglutination test at a 1:50 dilution **OR** fluorescent polarization assay.
Test date(s) _____
3. Enzootic Bovine Leucosis (EBL): ELISA **OR** Agar gel immunodiffusion (AGID)
Test date(s) _____
4. Vesicular Stomatitis: Virus neutralization **OR** complement fixation **OR** other tests authorized by USDA.
Test date(s) _____

IV. THER VETERINARY CONDITIONS

Vehicles used for transportation will be cleaned and disinfected with chemicals, approved for use in the US, before each use.

The animals will receive veterinary inspection, within 24 hours of export, and examined for evidence of external parasites, injury and infectious diseases (including vesicular stomatitis, bovine brucellosis, anthrax, bluetongue, tuberculosis, rabies and enzootic bovine leukosis).
