

U.S. Origin Health Certificate for Export of Swine to Korea

I. General Information

- A. Exporting Country: United States of America
- B. Ministry: United States Department of Agriculture
- C. Agency: Animal and Plant Health Inspection Service (APHIS)

II. Origin and Destination of Swine

- A. Name and address of consigner:

- B. Name and address of farm of origin:

- C. Name and postal address of consignee:

- D. Means of transport (flight/vessel names/numbers): _____
- E. Port of embarkation: _____
- F. Date of embarkation: _____

III. Identification of the Animals

Identification/ Ear Tag	Breed	Age	Sex

**Note: Additional rows or chart may be added as needed.*

IV. Certification Statements and Testing requirements

1. The United States has been declared to be free of foot-and-mouth disease and classical swine fever (CSF) for 12 months and enterovirus encephalomyelitis (Teschen disease), swine vesicular disease, and rinderpest for 24 months prior to export. For 3 years prior to export the United States has been declared free of African swine fever and peste des petits ruminants. No vaccination is practiced against these diseases in the United States.
2. The animals for export have not been vaccinated for swine Aujeszky's disease.
3. On the farm of origin, there has been no clinical or serological or pathological evidence of porcine brucellosis for 3 years, rabies, swine Aujeszky's disease and transmissible gastroenteritis for 1 year, and anthrax, hemorrhagic septicemia, leptospirosis, atrophic rhinitis, porcine epidemic diarrhea and porcine delta coronavirus for 6 months.
4. The animals originated from a State that has been free of vesicular stomatitis for the last 2 years and the animals have not been vaccinated for this disease.
5. The animals for export are free of clinical evidence of anthrax, rabies, atrophic rhinitis, erysipelas, and trichinosis.
6. The animals have been in a USDA-approved export isolation facility at _____ (name and address of facility) for at least 30 days from _____ to _____ (dates) where they are not in contact with other animals. The animals were inspected during isolation and were found to be healthy and free from evidence of communicable disease.
7. After due inquiry, I am satisfied that the animals to be exported have not been fed garbage at any time.
8. The sows (dams) have been vaccinated for transmissible gastroenteritis (TGE) on _____ (date) with _____ (Name of the product).
(If this certification cannot be made, then the animals must be tested as required under test requirements.)
9. The animals for export have been treated with long acting oxytetracycline at a rate of 20mg/kg body weight on _____ twice at 14 day interval. The second treatment must be performed within 3 days _____ (date) prior to shipment.
(If this treatment is not conducted then the animals must be tested as required under test requirements.)
10. The animals have been treated for ectoparasites and blood feeding insects on _____ (date) with _____ (name of product) during USDA-export isolation within 7 days of shipment. Method and number of treatments: _____.
(This treatment is exempted during the season where it is not suitable for the activity for the blood sucking insects and their vectors. This must be certified on the health certificates.)

11. All hay, bedding and fodder supplied for the animal during export isolation and transportation is produced in the United States and is sanitary and is not known to be contaminated with any communicable animal disease pathogens. No additional material will be added after departure.
12. Crates, vehicles and the stowage area of vessel/aircraft used for transportation of animals as well as the export quarantine facility will be disinfected using a disinfectant approved by U.S. Government. The animals for export will be transported to the port of embarkation and to Korea without coming in contact with any other animals.

TEST REQUIREMENTS:

The animals were negative to the following tests during USDA-approved export isolation. The tuberculosis test is to be conducted within 30 days prior to shipment. Laboratory name and test dates should be indicated. Mark through testing options not used.

1. Tuberculosis (TB): Intradermal test using bovine PPD tuberculin
2. Brucellosis: Standard tube agglutination test at 1:50 dilution, or complement fixation test, or ELISA
3. Aujeszky's disease: Serum neutralization (SN) test or ELISA
4. PRRS: IPMA test or IFA test or ELISA
5. Vesicular Stomatitis: ELISA or SN test
6. TGE: SN test or ELISA (**This test is not required if certification statement #8 can be made.**)
7. Leptospirosis: Microtiter agglutination test for Leptospira pomona, L. hardjo, L. grippotyphosa (**This test is not required if certification statement #9 can be made.**)
8. PED/PDCoV PCR (pooling of up to 5 samples per test)
