Veterinary Health Certificate for the Export of Land Fowl from the United States of America to Taiwan

Veterinary Authority UNITED STATES DEPARTMENT OF AGRICULTURE	Date Of Issue	Certificate Number
--	----------------------	---------------------------

1. The United States is free from high pathogenic avian influenza and Newcastle disease in poultry as defined by the World Organization for Animal Health (OIE).
2. The animals shall have been kept, for three months prior to export or since hatching, in an enclosure regularly inspected by veterinarians who are also responsible for disease diagnosis and notification.
3. The disease listed below shall not have been confirmed in the animal enclosure for the below time periods: for one year without Newcastle disease, infectious bursal disease, pullorum disease, avian infectious laryngotracheitis, fowl cholera, or avian tuberculosis; and for six months without H5 and H7 subtype avian influenza, avian chlamydiosis, avian encephalomyelitis, egg drop syndrome, avian infectious bronchitis, avian mycoplasmosis cause by *Mycoplasma gallisepticum*, infectious synovitis caused by *Mycoplasma synoviae*, infectious coryza, fowlpox, or fowl typhoid.
4. The animals were detained for a 21-day quarantine in an approved facility that does not allow free entry of mosquitos and is supervised by a U.S. Department of Agriculture (USDA) accredited veterinarian (Start Date):
5. The animals were considered healthy and free from any disease symptom during quarantine.
6. The animals were subject to the following tests during quarantine [For consignments of greater than 20 birds, no more than 20 birds need be tested. In such cases, the number of birds actually tested should be specified.] All test results were negative and performed at
 List dates of test sample collections, methods, and test dates [attach]:
H5 and H7 subtype avian influenza: antibody test and causal agent identification;
Pullorum disease: serological test; or the enclosure is certified by National Poultry Improvement Plan (NPIP) as Pullorum-Typhoid clean (*delete unneeded option*)
Avian mycoplasmosis caused by *Mycoplasma gallisepticum* (only for chickens and turkeys; other land fowls are exempt): serological tests twice at least 28 days apart and the last test shall be in the quarantine period; or, the enclosure is considered free of this disease by USDA according to OIE's Terrestrial Animal Health Code. (*delete unneeded option*)
Newcastle disease: causal agent identification
7. The animals are not vaccinated against avian influenza or coccidiosis. [Name and date given of any other vaccines in attached]
8. The export consignment shall be prevented from contacting other poultry and birds as it is transported from the animal enclosure to the importing country.
