

Israel – Processed fish protein for use as agricultural fertilizer

The June 2002, *Model of a veterinary certificate to accompany processed fish protein for agricultural fertilization exported from the USA to Israel* is no longer valid. IVSAH has amended their import requirements for fish based fertilizers, and will no longer accept shipments of fish based fertilizers accompanied by this certificate.

Exporters should not ship any consignments currently located at ports. If possible, alternate arrangements should be made for shipments currently on the water.

NIES has requested IVSAH engagement in negotiation on a new certificate for the export of feed based fertilizers from the U.S. to Israel. Once negotiations are complete, the new certificate will be posted on the IREGs.

Your patience is greatly appreciated.
