

Spray Dried Chicken Meat Powder for the Manufacture of Pet Food

Japan prohibited the import of processed animal proteins including Meat powders for use in pet food from all countries in 2001. In June 2016, Japan agreed to allow the import of spray dried chicken meat from the United States under certain requirements. In July 2016, APHIS implemented a program to verify those requirements and approve facilities to export spray dried chicken meat powder to Japan for the manufacture of pet food. That program is the “Chicken Meat Powder Program – Japan” also known as the CMPP-J.

Chicken meat powder can be any spray dried product derived from no animal-origin ingredients other than chicken: meat, bone, fat, blood, skin, tendon, and viscera. An example would be spray dried chicken liver powder. Dairy-origin ingredients may also be included in the powder.

Only those facilities listed in the APHIS database as approved to export to Japan under the CMPP-J may export chicken meat powder to Japan for the manufacture of pet food. [Japan continues to prohibit the import of chicken meat powder for livestock feed.] For information on how to become approved under the CMPP-J, please contact your local APHIS Veterinary Services Field Office.

In addition to the U.S. producer being approved under the CMPP-J, the Japanese importer must meet certain requirements. The Japanese importer should contact their local Japanese authorities for details.

Certificates for each shipment must be completed in accordance with the following instructions.

Each shipment must be accompanied by a VS Form 16-4.

The VS Form 16-4 must be submitted to the pertinent VS Service Center with the following documentation (this documentation does not become part of the certificate and should not be forwarded to Japan with the consignment):

- Written verification identifying the location(s) that the poultry (from which the chicken meat powder was derived) may have been raised or slaughter, or may have transited prior to slaughter. If any of these

locations are currently under AI-related restrictions, the dates of slaughter must also be included. This documentation must indicate that the source poultry was not raised or slaughtered, and did not transit banned zone(s) during banned periods. For more information on these periods, please see:

http://www.aphis.usda.gov/regulations/vs/iregs/products/downloads/ja_trad_ba.pdf.

- A laboratory report demonstrating, through microscopy, ELISA, or PCR testing, the absence of ruminant materials (other than dairy) in a lot of chicken meat powder produced at the facility. The report must be dated within the previous 90 days for facilities that have been operating under the CMPP-J for over 90 days. (For facilities that have been operating under the CMPP-J for less than 90 days, the report must be dated within the previous 30 days.)

The VS Form 16-4 must be prepared as indicated below. If all the required information in any section will not fit in the space allotted, the VS Form 16-4A should be used as a continuation page.

In the ADDITIONAL DECLARATION area of the VS Form 16-4 and the VS Form 16-4A, only the following exact text may be included (if additional space is needed, “See page 2” should be inserted in the appropriate spot, and a VS Form 16-4A should be page 2). Text in green should not appear on the certificate.

Begin “Additional Declarations” text>>>

The chicken meat powder described below:

1. Was produced in accordance with the relevant U.S. domestic regulations;
2. Was derived from chicken meat etc (meat, bone, fat, blood, skin, tendon, and/or viscera) meeting the following criteria:
 - There have been no outbreaks of highly pathogenic notifiable avian influenza (HPNAI) in the United States for at least 90 days before shipment of the materials described below; or when the United States has an outbreak of HPNAI, there have been no outbreaks of HPNAI in the State where birds for the materials described below were produced for at least 90 days before shipment of the materials described below. Further, in the area where birds for the materials described below were produced (such an area being within a minimum radius of 50 kilometers from the production farm), Newcastle disease, fowl cholera, and other serious infectious fowl diseases other than

LPAI, as recognized by the government of the United States, have not occurred for at least 90 days before slaughter or since its hatching.

- The live poultry used for the production of the materials described below did not originate from nor pass through any LPAI-banned area before being carried into poultry processing plants. An LPAI-banned area is any zone within 10 km of any premises where an infection of NAI virus that is not HPNAI as defined in the OIE Terrestrial Animal Health code (OIE Code) has been confirmed and restricted from export by Japanese Animal Health Authorities.

- To the best of APHIS' knowledge, the chicken meat etc. from which the chicken meat powder was derived and the finished chicken meat powder were stored in clean and sanitary wrapping and containers and handled in a way to prevent being exposed to any pathogens or any animal infectious diseases prior to shipment.

- From chicken slaughtered only in the United States.

- Collected in a way to prevent contamination with materials derived from animals other than chickens.

- Collected at animal slaughter facilities inspected and approved by the USDA in accordance with the relevant U.S. domestic regulations and handling only chicken or other poultry.

- From chickens recognized to be free of any animal infectious diseases and fit for human consumption as demonstrated by passing ante-mortem and post mortem inspections conducted by official USDA inspectors at approved slaughter facilities.

- Transported from slaughtering facilities to manufacturing facility in new packaging.

3. If any porcine materials are processed on the same production line as the chicken meat powder, either:

A. Those materials originate from pigs deemed free of any animal infectious diseases and fit for human consumption as demonstrated by passing ante-mortem and post mortem inspections conducted by official USDA inspectors at approved slaughter facilities; or

B. The production line is thoroughly cleaned to avoid contamination of the chicken meat powder with materials derived from pigs.

4. Dairy materials may be included in the chicken meat powder.

5. If fish or rabbit materials are processed on the same production line as the chicken meat powder, the production line is thoroughly cleaned to avoid contamination of the chicken meat powder with materials derived from fish or rabbits.

6. Was manufactured, packaged, and stored in the following manufacturing facility approved by the USDA through on-site inspections as meeting the requirements to export chicken meat powder to Japan from the United States: [insert name, address, and approval number of manufacturing facility].

7. Is transported and handled in a manner to prevent contamination with any pathogens of any animal infectious diseases and with any other animal products between packaging and wrapping in the designated manufacturing facilities until the point of shipment. The packaging and wrapping is new material to prevent contamination.

8. Is intended for use in pet food material only.

<<<End “Additional Declarations” text.

In the “Port” section of the VS Form 16-4, the exporter should add the specific PORT of exit information. “Any U.S. Port” is not acceptable.

The Date and Certificate Number sections of the VS Form 16-4 should be left blank by the exporter. The endorsing office will add this information, and if necessary “page 1 of 2” text.

The “Product” box of the VS Form 16-4 must include the following text: “Kind of container or packaging:” followed by a description of the packaging, e.g. 500 kg totes. Also included must be the type of product, quantity, unit of measure, and species of origin.

In the IDENTIFICATION BOX OF THE VS Form 16-4, the following information must be included:

Container number: [insert container number] Seal number: [insert seal number] Port of destination: [Insert port of destination] Shipping date: [insert date product expected to leave port]

For a graphic explanation of the majority of these requirements, please go back and select the applicable file. If these files are utilized to prepare the certificate, care must be taken to ensure that “inserted” text does not “push” required text off the printable page.
