

South Africa – Porcine Epidemic Diarrhea Virus (PEDV)

The South African Department of Agriculture Forestry & Fisheries has implemented a ban on certain porcine products in response to the recent findings of PEDV in the United States.

The only animal product affected by the ban is **porcine plasma containing products**.

If you are exporting a product from the US to South Africa that will be/is impacted by this ban, please notify your Veterinary Services Export Service Center or Local VS Office. This will allow VS to engage in negotiations for the appropriate risk mitigations to allow exports of your product to resume.

Updates will be posted as new information becomes available.

Your cooperation and patience is greatly appreciated.
