REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits		12 ^{pieces}			12
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	0	4	35	0	39
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	156	0	156
7. Hamsters	0	0	57	0	57
8. Rabbits	0	424	1781	0	2,205
9. Non-human Primates	0	0	0	0	0

11. Pigs	0	7	330	0	337
12. Other Farm Animals	0	0	0	0	0
13. Other Animals	0	0	0	0	0

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Registration No.: 93-R-026

Dear Mr. Gibbens:

Enclosed is SRI International's "Annual Report of Research Facility" for the period of October 1998 through September 1999. Studies listed as Category E were conducted in accordance with FDA guidelines (CFR 21 § 312.23) and the 1993 FDA Toxicological principles. Animals classified in Category E were on toxicity studies done to determine pharmacokinetics, bioavailability or side effects of new drugs or chemicals. Usually none of these effects are known at the time of testing. In most instances, no side effects were noted, or only minor side effects, such as transient vomiting or diarrhea. However, because of the potential that animals may experience more than momentary pain or distress, animals on these types of studies are classified as E Category.

Very truly yours

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats	17		42		42

8. Rabbits	2	2	107		109
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the general location of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

1. Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
2. Each principal investigator has considered alternatives to painful procedures.
3. This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be identified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
4. The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the dates and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

11. Pigs	0				
12. Other Farm Animals <i>Goats</i>	35	57	0	0	57
13. Other Animals <i>Burros</i>	5	2	0	0	2

ASSURANCE STATEMENTS

- 1). Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2). Each principal investigator has considered alternatives to painful procedures.
- 3). This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility;
- Each principal investigator has considered alternatives to painful procedures
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A.)

A. Animals Covered : By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain- relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep					
11. Pigs			4		4
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care to cover the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters			146		146
8. Rabbits					
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

**Category E Justification Statement
For
1998-99 USDA Annual Report**

Thirty-three (33) animals were included in the "E" category because these animals were on studies involving induction of Parkinson's disease and we presume that there is some psychological distress associated with the temporary impairment of motor function experienced by these animals. In humans, Parkinson's disease causes increasing motor impairment and a portion of our research into the nature and possible treatment of this disorder involves induction of the disorder in living animals. In particular, non-human primates represent the only animal model in which the behavioral, neurochemical, and neuropathological features of parkinsonism are fully expressed and thus they are the best model for studies on Parkinson's disease. Based on the experience in humans, this disorder is not known to cause physical pain; however, we presume the animals experience some distress during the time they have diminished motor function. We have strong reason to believe that this statement is correct, since we have cared for a number of humans with a form of parkinsonism which is identical to that experienced by these animals, and none had pain. The impairment in our experimental studies cannot be alleviated since it is necessary to the objectives of our studies. Use of sedatives or tranquilizers is also not justified because the effects of these agents would interfere with the results of our investigations. Nor is it justified on purely medical grounds, since pain, psychosis, or agitation, are not a part of this syndrome based on our experience in humans.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 702.3A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits			30		30
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

RE: 1999 Annual Report, Registration/License No.: 93-R-0380/B-0192

Dear Dr. Gibbens:

Please revise the 1999 Annual Report of Research Facility (Aphis Form 7023) dated October 5, 1999 submitted by Santa Cruz Biotechnology, Inc. (Registration/License No.: 93-R-0380/B-0192) as follows:

Line 12: Change the number of goats in column D from nine to zero and change the number of goats in column E from zero to nine.

Line 12: Change the number of donkeys in column D from two to zero and change the number of donkeys in column E from zero to two.

Drs. Koch and Smith requested that I make these revisions during their inspection of our facility on December, 7, 1999 for the following reasons: The procedure producing pain or distress in these animals involved treatment of abscesses induced by immunization procedures. Most abscesses were treated following their spontaneous rupture. Fluids were expressed manually by applying brief pressure around the lesion. Lesions were irrigated with antiseptic and then a topical antiseptic was applied. In one case (goat), an abscess was ruptured by making a small incision with a sterile scalpel blade. The lesion was then treated with antiseptic as described above. No analgesic or anesthetic was used.

Lidocaine will now be used for relieving pain or distress before immunization-induced abscesses are treated. Animals treated in this way will be listed in category D. Drugs had not been used previously in these cases because the procedures introduced only slight pain or distress and no other adverse affects on the animals had been observed either during or after treatment.

Please contact me if you require additional information.

Sincerely,

[Redacted signature]

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits	0	102	0	0	102
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

-
1. Registration Number: 93-R-0397
 2. Number 57 of animals used in this study.
 3. Species (common name) Rats of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Animals were used in an acute toxicology limits test.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Protocol was an FDA requirement. The interaction of the test article with analgesic compounds is unknown, thus to avoid introducing unpredictable confounding variables into the study, analgesics were not used.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

93 R 0397

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 93-R-0397
2. Number 2,308 of animals used in this study.
3. Species (common name) Guinea Pigs of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Animals developed lesions associated with Freund's complete adjuvant injected intradermally.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

It is unknown whether or not analgesics will interfere with this test. Freund's adjuvant was used per the FDA guidance document and ISO10993. A validation is scheduled for fiscal year 2000 to evaluate both the impact of analgesics on the current protocol outcome, as well as alternative adjuvants which might be substituted for Freund's.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					0
5. Cats					0
6. Guinea Pigs				Per telephone w/ [REDACTED]	0
7. Hamsters				[REDACTED]	0
8. Rabbits	2	51	57	3 Dec 99 (b)(6), (b)(7)(C) - (C)	138
9. Non-human Primates					0
10. Sheep					0
11. Pigs					0
12. Other Farm Animals					0
13. Other Animals					0

NOT A FOIA DELETION

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

13. Other Animals					

None

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs prior to surgery, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits			4		4
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					
Kangaroo rats (Dipodomys sp.)		25			25

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

USDA Annual Report:
October 1, 1998 to
September 30, 1999

Explanation for Column "E" on APHIS Form 7023

13E. Rats:

7 rats were used in a mammalian physiology class where they were given thiouracil in their food and water to induce hypothyroidism.

17 rats were used in a mammalian physiology class where they were injected with alloxan to induce diabetes.

13E. Mice:

58 mice were used in a immunology class for ascites production.

This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Annual Report of Research Facility
University of California, Davis
Addendum

Since many agricultural studies have potential biomedical applications, and since any of our farm animals could be used for teaching veterinary students, we have included all farm animals used on campus in this report. The vast majority of these farm animals are used in agricultural studies.

Explanations for numbers shown under column "E":

These ground squirrels were used in agricultural studies of in which rodenticide baits were being developed and studied. These were primarily field studies in which rodents were poisoned. Both the acceptance of the bait and it's efficacy must be studied. The Environmental Protection Agency requires that the lethal dose of the agent be defined. In order to determine the lethal dose, death is a necessary endpoint because animals exhibiting signs of toxicity might still recover, so euthanasia renders the studies invalid. Likewise anesthetics or analgesics affect the toxic dose of the rodenticide and would render the data invalid. Anesthetics would also prevent the animal from ingesting the bait and thus interfere with assessment of it's palatability.

Efficacy studies are required by the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Information about the Act and its requirements is given on the Environmental Protection Agency's website at <http://www.epa.gov/reg50opa/defs/html/fifra.htm>. The regulations are given in Title 7 US Code, s/s et seq. (1972).

Exceptions to provisions of the Act:

With respect to the general prohibition of multiple survival surgery, the Administrator of USDA has granted an exception in which cesarean sections are sometimes performed in normal female primates during successive pregnancies. This exception applied to 80 animals during the reporting period.

Justification for cesarean sections

Studies of birth defects and growth retardation require that pregnancies be terminated by cesarean section at a standardized time point to allow for careful examination of fetuses for defective development and fetal weight. Allowing these pregnancies to proceed to full term has several pitfalls, including possible loss of the infant (and experimental data) due to maternal cannibalization if it is born dead, prematurely, or with a serious defect. In addition, the large range in gestational age at normal delivery would make it difficult to accurately assess birth weight, an important indicator of normality in these studies. Taking the infant by cesarean section gives us the highest chance of obtaining a viable infant.

93R0433B

Justification for multiple cesarean sections in the same animal

Multiple cesarean sections are routinely performed in human females. Animals undergoing hysterotomies at the CRPRC rarely have post surgical complications and are fertile post-operatively. Any animal with complications will be dropped from the protocol. Post operative animals do not demonstrate any handicaps or ill health following the cesarean.

Our practice has been to maintain a breeding colony which provides the required pregnancies for these studies. Multiple use of animals allows us to use purpose bred animals from our colony rather than capturing wild primates. One can see that if we use 100 animals per year, and if these animals could never be used again, it would be necessary to import additional animals rather than use our existing breeding colony. Also, without multiple use, animals having already had a cesarean section, (many of our animals have), could not be utilized in the breeding colony.

The net effect of using these animals only once would be that an increased number of primates would be used, and that possibly a number of animals might be euthanized that would otherwise remain in our breeding colony for many years. Approval of this exception will allow us to continue our studies while minimizing the number of animals used, minimizing our use of threatened species from the wild, and prolonging the useful lives of our breeding animals.

In a few other studies, the IACUC has granted exceptions to allow primates to be maintained on regiments of restricted water intake. These are studies in which the animal receives water or other liquids as a reward for performing tasks. If the animals were satiated with water outside of the study period, they might not be motivated to perform the tasks. The animals receive their water during the day as they perform the tasks.

The IACUC and the Primate Center have developed detailed guidelines to insure that these animals receive adequate amounts of water during the day to support their health and well-being. The animals must receive an amount of water daily which is individual calculated for each animal based on their physiologic needs. The animals are also monitored very closely by veterinary staff and animal care staff; however, they are not routinely given two hours free choice access to water twice daily as would otherwise be required in the regulations. This exception applied to 13 animals during this reporting period.

Sincerely,

(b)(6)

71R0014

Attachment to 1999 USDA Annual Report of Research Facility
GTC Redfield Laboratories
Registration Number 71-R-014

Redfield Laboratories is a division of Genzyme Transgenics Corporation (GTC). Redfield Laboratories is a general toxicology facility and one of the five GTC pre-clinical toxicology testing laboratories in the United States with the toxicology testing expertise needed to meet EPA, OECD, FDA, and Japanese regulatory requirements. Redfield Laboratories performs toxicology and pharmacology testing of drugs, medical devices, consumer products, agricultural and industrial chemicals, veterinary products, petrochemicals, and phytochemicals.

Individual research projects were classified in Column E on the accompanying report. These studies involved the administration of test articles to animals by a variety of routes. Under the procedures specified in each of the research protocols, many of the animals probably have been subjected to more than momentary or slight pain and distress since these studies were performed to determine the potential toxicity of test articles. All of these protocols were approved by Redfield Laboratories' Institutional Animal Care and Use Committee (IACUC) and no anesthetic, analgesic, or tranquilizing drugs were used during the conduct of the studies since these drugs could potentially adversely affect the results and/or interpretation of the studies. However, to prevent unnecessary pain and suffering, animals were closely monitored by the attending veterinarian, technical and animal care staff, and animals determined to be severely compromised and/or moribund were humanely euthanized.

Explanation of procedures resulting in a Column E classification:

Individual research studies were conducted with the animals in column E. These studies involved the administration of test articles to animals by various routes of exposure: oral (capsule or gavage), intradermal, subcutaneous or intravenous injection, dermal or ocular application. Under the procedures specified in the research protocols, animals were probably subjected to more than momentary or slight pain and distress, since these studies were performed to determine the potential toxicity of test articles. The use of drugs to relieve pain or distress would compromise these studies for the following reasons: 1) signs elicited by exposure to the test article could not be masked since the study objectives were to obtain and document toxic responses; 2) an analgesic drug may affect the metabolism or other actions of the material under test and thereby affect the research results; 3) it was not practicable to treat only affected animals because such treatment may affect response to the test material in unforeseen ways and preclude comparison with other, non-treated animals. To prevent unnecessary pain and suffering, any animals determined to be severely compromised and/or moribund were humanely euthanized upon approval of the Study Director or the attending veterinarian. All of the studies were conducted for clients/sponsors with reported results and conclusions to be submitted to various regulatory agencies to support applications for product approval.

Briefly listed are the **Column E** studies involving the animal species covered by the Animal Welfare Act (AWA) which were conducted during the period of October 1 through September 30 at Redfield Laboratories. See attached:

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 71-R-0100
2. Number Protocol 2005/7 approved ^{for 504} of animals used in this study.
3. Species (common name) Rats of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Protocol Title: Mechanisms underlying Behavioral & Neurobiologic Effects of Neonatal Pain

Neonatal rat pups will be subjected to moderate and repetitive painful stimuli, in order to produce an experimental model that corresponds with the clinical care currently given to premature infants. Following completion of the repetitive pain paradigm from P0 to P7, the older rats will only be exposed to the hot plate test for measurement of pain thresholds. Exposure to painful stimuli will also occur for P15, P21, and P30 animals in Experiment 2, and for P14 animals in Experiment 3. These time points are necessary to illustrate the complete ontogeny of the pain system beyond the neonatal pain, some exposure to painful stimuli cannot be avoided. There are no drugs available that can provide analgesia for acute and short-term stimuli; thus the effects of the drug would outlast the effects of any painful stimulus by a large factor.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

For these acute and intermittent stimuli, pain relieving drugs cannot be given because: (a) they would prevent the processing of painful stimuli in the brain (b) they would cause independent neurobiological effects, unrelated to the experimental paradigm, and (c) they would have an unpredictable duration of effects since the metabolism of analgesic drugs changes drastically during development. Neurobiologic effect of pain and distress is what is being studied as to how it has manifested abnormal behaviors in later childhood and adolescence. If relief is given, pain and distress would not effect the behavioral pattern that is being analyzed.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

-
1. Registration Number: 71-R-0101
 2. Number 40 of animals used in this study.
 3. Species (common name) Rabbits of animals used in this study.
 4. Explain the procedure producing pain and/or distress.

See attached

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

USDA Annual Report of Research Facility
Column E Explanation

This project was a commercial antisera production for an international company. Rabbits were injected ID with an initial dose of CFA. Subsequent injections used IFA and were also given ID. The rabbits involved in this protocol were online approx 24 months. At approx 23 months, 3 of the rabbits began to show swelling and lesions and to exhibit signs of discomfort. Since the customer's original protocol did not address the use of analgesic or anesthetics, they were contacted concerning the condition of the rabbits and questioned on how to proceed. Customer did not respond immediately and after approx 4 weeks, they were notified that the rabbits in question would be terminated. At that time, the 3 rabbits exhibiting signs of discomfort were euthanised using Pel-Freez' standard euthanasia protocol.

To prevent this situation from reoccurring, the following changes have been made to Pel-Freez' protocols. First, all projects requiring ID injection will be reviewed more frequently by the IACUC and will be limited in duration to 18 months. Second, if a customer can not be contacted within a reasonable amount of time, animals experiencing pain or distress will be euthanised, based on the decision of the animal technician and the consulting veterinarian.

OCT 22 1999

This report is required by law (7 USC 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

See reverse side for additional information.

For FY 1998 - 1999 Annual Report of Registered
Research Facility - APHIS Form 7023

Each animal in each referenced test was employed in testing a Licensed Veterinary Biological product as required by Federal Regulations as codified in Title 9 CFR. Humane euthanasia of animals on 9 CFR required tests are provided for in Federal Register publication dated August 21, 1995 citing part 117.4 (d) - Animals at Licensed Establishments - test animals (filed August 18, 1995) has been initiated and included as standard testing protocol. Attending veterinarians and related employees have been informed and Colorado Serum Company is complying with this regulation.

Explanation of usage of animals listed in Column E.

Line Item 6.

Guinea Pigs

1101 Guinea Pigs were tested causing pain, for which no anesthetic, analgesics, or tranquilizers could be used. A detailed breakdown of guinea pigs by test reference is provided.

9 CFR 113.451(d) Tetanus Antitoxin potency testing -
764 guinea pigs

9 CFR 113.106(c) Clostridium chauvoei Bacterin
potency testing - 300 guinea pigs

9 CFR 113.107(c) Clostridium haemolyticum potency
testing - 37 guinea pigs

Line Item 7.

Hamsters

414 Hamsters were tested causing pain, for which no anesthetics, analgesics, or tranquilizers could be used. A detailed breakdown of hamsters by test reference is provided.

- 9 CFR 113.101 Leptospira Pomona Bacterin potency - 83 hamsters
- 9 CFR 113.102 Leptospira Icterohaemorrhagiae Bacterin potency testing - 83 hamsters
- 9 CFR 113.103 Leptospira Canicola Bacterin potency testing - 83 hamsters
- 9 CFR 113.104 Leptospira Grippotyphosa Bacterin potency testing - 83 hamsters
- 9 CFR 113.105 Leptospira Hardjo Bacterin potency testing - 82 hamsters

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 84-R-0056
2. Number 23 at present of animals used in this study.
3. Species (common name) G. Pig of animals used in this study.
4. Explain the procedure producing pain and/or distress.

An occlusive wrap. placed around chest of G. Pig for 24hrs. produces distress in the animal. (skin Irritancy test) ~~see~~ Talked w/ Western Regional USDA director. as to diff. between stress + distress. when pigs come out of anest. they will panic for one or two minutes due to the vet wrap around their middle. then they settle down. (drinking not a prob. + they will eat if food is provided on bottom of cage. OVER

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below) Unaware of anything that will relieve. Stress in a Guinea Pig.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

84R0056

He told me it was a judgment call on my part as to whether this lies in D or E column. + since I already had the pigs in column E I will leave them there.

Thanks.

EXPLANATION OF A PROCEDURE PRODUCING PAIN OR DISTRESS IN RABBITS

24 rabbits were injected with lactic acid intravenously. This caused an apparent transitory discomfort lasting from a few seconds up to two minutes. A test for pyrogens in materials used in pharmaceuticals is required by the FDA. This test must be run per the USP procedure which does not provide for anesthetics or analgesics to be used. The company completed in-house testing and validation of the Limulus Amebocyte Lysate (LAL) assay for use in lactic acid screening and replaced the rabbit pyrogenicity test for lactic acid with this *in vitro* assay after the use of these 24 rabbits. The FDA approved this test change.

Exemption:

For the duration of this particular experiment, which lasted up to 4 weeks, animals assigned to the protocol were exempt from group exercise. This exemption was reviewed and approved by the ACUC. Study animals were housed in the study room in typical one-over-one cages approved for the laboratory animals. This exemption was instituted as a safety measure in order to closely monitor the animals for any potential adverse reactions as well as to allow for necessary collection of all physiological samples following administration of test compounds and new formulation concepts. For the duration of these experiments all animals received additional positive human contacts several times per each day of experiments.

Animals Listed in Column E:

Additionally, in year 1999, a total of six dogs and three rabbits experienced some degree of complications associated with the implantation of medical devices and subsequently these animals were euthanized.

ATTACHMENT #1

Date: November 12, 1999

Re: Information requested by USDA -

Requested information: an explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used.

The procedures performed involve extremity surgery of the goat's stifle joint. The surgeries are part of investigational studies focusing on three main areas: ligament repair, reconstruction or regeneration; meniscus repair or reconstruction; and articular cartilage repair or regeneration.

Pain relief is a primary concern when doing surgical procedures in experimental animals. During the surgical procedure pain relief was provided through the use of appropriate anesthetic agents. All animals were premedicated with xylazine hydrochloride, one mg/Kg IM. After 3-5 minutes, ketamine hydrochloride, 4.5 mg/Kg IM, was administered for induction and surgical prep of the animals. Each animal received preoperative penicillin (Bicillin LA with Procaine - 2.4 million units, deep IM) for prophylaxis. Each animal was intubated with an endotracheal tube for gas anesthesia and a gastric tube was passed into the stomach to reduce bloating and regurgitation. Maintenance of a surgical plane of anesthesia was achieved by inhalation anesthesia using isoflurane (range 0.5-2.0% depending on animal) (Marsam Pharmaceuticals, Inc., Cherry Hill, NJ) and oxygen (1.5 L/min). While under anesthesia the heart rate, respiratory rate and mucus membranes were monitored a minimum of every 15 minutes.

Post-operatively, pain relief may be accomplished by providing analgesic medications. However, for certain procedures no postoperative pain medications are administered so that information can be gained about how well a surgical procedure is tolerated. The goat model appears to be a good indicator of how certain orthopaedic surgical procedures are tolerated. Goats tend to not get up and stand if the surgical procedure is not well tolerated. If the surgical procedure is tolerated, the goat usually gets up but will not fully weight bear on the operated limb for a period of 2-3 days. The used of postoperative analgesics can mask this information and allow the animal to possibly weight bear before it normally would. Premature weight bearing on delicately repaired structures can possibly adversely affect the results and outcome of our studies. Generally, we do not want the goats up and weight bearing until the animal is able to tolerate this activity. In some cases a splint and/or resin cast is applied to the leg for immobilization. While pain relief medications can be provided to animals in splint/cast immobilization, care must be taken with animals in splints so that they are alert enough to learn how to used the applied splint.

As of September 1999 all experimental subjects in which articular cartilage repair surgical procedures are conducted routinely receive postoperative analgesics. Accordingly, these animals would be classified under column D in the future. The following is the administration protocol: Drug name: **Buprenex Injectable (buprenorphine hydrochloride)**; Dosage: 0.007 - 0.01 mg/kg, subcutaneous injection, initial dose 30 minutes post surgery. Every 24 hrs (use judgment), duration: 1 day (use judgment).

Column E Explanation

23 NOV 99
93R0287

1. **Registration Number:** 93 - R - 0287
2. **Number of animals used for Polyclonal Antibody Procedure:** 656
3. **Species of animals used for study:** Goat
4. **Explanation of procedure producing pain or distress:**

The use of Freund's Complete Adjuvant (CFA) for the production of antibodies may cause results ranging from momentary or slight pain, to distress such as decreased appetite/activity level, adverse reactions to touching inoculated areas, open sores/necrotic skin lesions, abscesses or lameness. IIC employs the use of minimal amounts of CFA in the production of polyclonal antibodies, and is committed to insure that the animals receive any care necessary to relieve symptoms noted above. The least amount of CFA possible is used per injection/animal to obtain acceptable results, and the animals are monitored twice daily to insure their comfort.

5. **Justification:**

All animals are observed before and after procedures, as well as, twice daily for sign of distress and/or abnormal symptoms. Typically, pain or distress is not noted, therefore not requiring any treatment modalities for relief. Any animals appearing to show distress are reported to the manager and appropriate steps are taken to relieve such distress. Preventative measures, such as analgesics, anesthetics or tranquilizing drugs, are not employed due to the absence of observable signs of pain or distress.

Laurel Heights Campus (not used for regulated animals in FY 98-99)

Mission Center Campus (not used for regulated animals in FY 98-99)

San Francisco General Hospital

Column E:

The University of California at San Francisco is committed to using laboratory animals in such a way as to minimize pain or discomfort. Each project is reviewed by a committee and many protocols have been redesigned to meet this goal. Attached are the explanations of the procedures producing pain or distress in the animals covered by Subchapter A - Animal Welfare and reported in column E during the period 10/1/98 through 9/30/99 and the reasons anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretations of the research. Separate Optional Column E forms (2) are attached.

Optional Column E Explanation Form

93R0440

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 93-R-0440 (formerly 93-R-044I)

2. Number 18 of animals used in this study.

3. Species (common name) Rabbit of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Two procedures could produce pain or distress in the animals. I) Aortic valve catheterization is performed via a cut-down over the right neck. However, general and local anesthesia are provided prior to and during the procedure, which is also performed in Category B animals. As the period of discomfort is brief and animals suffer no ill effects from it, additional analgesia has not been deemed necessary. II) The experimental infection that is produced with *Staphylococcus aureus* in this animal model may cause distress to a small proportion of the animals. Signs of infection appear at 18-24h after inoculation. Untreated, control rabbits are euthanized approximately 24h after inoculation, which minimizes the distress in these animals. Signs of infection abate with institution of antimicrobial agents in treated animals and generally resolve in two to three days. During the first two days of the experiment, supplemental fluid is administered to provide fluid replacement and some calories until the appetite returns. If fluid intake remains poor thereafter, fluid supplements are continued as needed. Food supplements such as carrots, lettuce, and greens are provided to encourage food intake and to help maintain normal flora.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Analgesics are not be used during the period of infection for the following reasons. 1) They are not necessary. Pain is not a prominent symptom of endocarditis. The chapter in Mandel's "Principles and Practice of Infectious Diseases" lists pain in association with endocarditis that occurs at various locations at a frequency of 10-15%. Pain is a more prominent feature of tricuspid valve (or right-sided) endocarditis, but the model is aortic valve endocarditis. Based on my experience with several hundred cases of endocarditis in humans, analgesics are rarely needed in the management of left-sided endocarditis. Also the protocol includes use of fluid supplementation and antimicrobial therapy, which ameliorate signs of the disease. 2) Analgesics also may alter the natural course of the disease, lead to over-sedation or respiratory depression, and thereby contribute to mortality, or have unanticipated interactions with antimicrobials. Administration of agents other than antimicrobials in a model of this type would be highly questionable scientifically and analgesic agents are not employed by any investigators using this model of infection.

6. What, if any federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Optional Column E Explanation Form

93R0440

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 93-R-0440 (formerly 93-R-044I)

2. Number 32 of animals used in this study.

3. Species (common name) Rabbit of animals used in this study.

4. Explain the procedure producing pain and/or distress.

The Committee on Animal Research (UCSF's IACUC) requested that these rabbits be categorized as Column E usage because they were exposed to tobacco smoke. This determination was based on the discomfort felt by humans in the room in which these rabbits are housed during the period of the exposure to second-hand smoke. However, it is not clear that this causes any physical distress to the rabbits. They are exposed to tobacco smoke for 8 hours per day, 5 days per week, for 10 weeks, and otherwise breathe clean air. Their food intake is the same as controls and their weight gain is the same as controls. They also have a drug placed in their drinking water which does not seem to cause any distress. Their water intake is the same as the controls. Thus, neither of the above appear to produce any distress and therefore no countermeasures appear necessary. Blood samples are drawn twice during the whole 10 week period. This is done by withdrawing blood from an ear vein with the rabbits in a restraining box for a short time. Again, there does not appear to be evident stress with the blood drawing.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Because the purpose of the study is to determine the comparative effects of angiotensin converting enzyme inhibitors and angiotensin receptor blockers on vascular function and atherosclerosis in cholesterol-fed rabbits exposed to second-hand smoke, additional fresh air would eliminate the exposure required to measure the effects. It is unclear that any pain or distress is caused by exposure to tobacco smoke or by drinking water with drug dissolved in it

6. What, if any federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions allowed to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

SIGNATURE OF C.E.O. OR INSTITUTIONAL OFFICIAL 	NAME & TITLE OF C.E.O. OR INSTITUTIONAL OFFICIAL (Type or Print) Roche Palo Alto	DATE SIGNED 23 NOV 99
---	---	---------------------------------

ROCHE BIOSCIENCE
Registration No. 93-R-0029
Explanation for Category E, APHIS Form 7023
10/1/98-9/30/99

Roche Bioscience animal research and testing protocols are designed, insofar as is possible, to eliminate pain and distress. In some cases, however, the use of anesthetics, analgesics, or tranquilizing drugs would impair or invalidate test results.

Six dogs may have experienced pain or distress when they were used to evaluate the toxicity potential of new drugs as required by regulatory agencies (i.e., FDA). It was not the intent of the studies to produce pain. For decades, the FDA has required the use of one rodent and one nonrodent species to prove drug safety. Recent references include the Federal Register, August 26, 1996, Vol. 61, #166, pg. 43933 to 43935, and Center for Drug Evaluation and Research Guidance for Industry: M3 Nonclinical Safety Studies for the Conduct of Human Clinical Trials for Pharmaceuticals, July 1997. Dogs and nonhuman primates are the industry standards for nonrodent, mammalian species.

Eleven pigs, 2 dogs, and 4 nonhuman primates may have experienced pain or distress on the IACUC protocols "Urethral Obstruction Model in Conscious Pigs", "Urethral Obstruction Model in Conscious Dogs", and "Urethral Obstruction Model in Conscious Cynomolgus Monkeys", respectively. Chronic urinary bladder obstruction in humans is due primarily to an enlarged prostate. The large animal model is intended to mimic the chronic human condition, therefore, a surgically implanted obstruction must be present for at least 4-6 weeks before the model is useful. The purpose of this study is to study the disease and develop drugs to prevent symptoms related to involuntary bladder contractions that are caused by a supersensitivity of nerves innervating the bladder. The supersensitivity develops as the result of urine retention and increased voiding pressures that occur over an extended time period (i.e., months). Animals were administered post-surgical analgesics and were closely monitored by the research and veterinary staff. Analgesics alone would not prevent or relieve the discomfort from the urge to urinate, and anesthetics would not be feasible due to the long time period necessary for the model to develop. Sedation was provided to animals that demonstrated more pronounced straining. Animals were euthanized if severe complications arose.

IACUC-Approved Deviations from U.S.D.A. Standards

Twenty-three dogs were excluded from regular exercise periods for 4-21 days following administration of radioactively-labeled compounds as part of a metabolism study. They were confined to individual metabolism cages to allow collection of excreta. The cage size conformed to USDA standards. During this period, they all received extra attention and human interaction. They were housed in a room with other dogs on the study and were therefore in visual, olfactory, and auditory contact.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 93-R-0193
2. Number 8 of animals used in this study.
3. Species (common name) Dog of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Sodium mono-urate crystals were injected into the stifle joint of each dog while it was under general anesthesia. This induced a subsequent synovitis and subacute lameness of short duration. All dogs were clinically pain free within 2 days.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)
- The study was designed to evaluate the effects of anti-inflammatory drugs on the crystal induced arthritis. A good response was found if the dog's lameness improved. Analgesia would have masked any response (or lack of response) to test drugs.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

(b)(6), (b)(7)(C)

CATEGORY E STUDIES**1. Sheep exposed to heat stress - 7 sheep**Description of Procedures:

Pregnant sheep are placed in an environmental chamber that cycles room temperature between 40-40.5 °C for 12-14 hours/day and 35 °C for the remainder of the day from day 33-35 of gestation until day 90-115. Humidity in the chamber is 45-50%. Animals are housed in standard cages with ad lib water and food. For safety, the heating system is equipped with an alarm and automatic cut-off system.

Explanation of Reasons Why Pain- or Distress- Reliving Drugs Were Not Used:

The procedure is designed to mimic a naturally occurring phenomenon, namely, pregnancy in hot climates where fetal intrauterine growth retardation is a common problem. The animals in the chamber under these conditions give no visual or clinical indication of stress. They eat and drink normally; their stool pattern is also normal; and their wool continues to grow. The procedure does alter placental development, but since altered placental development is not known to be associated with pain or distress in any species, use of any drug or other treatments would be speculative and possibly problematic for fetal development.

2. Rabbits exposed to Group B Streptococci - 83 rabbitsDescription of Procedures:

This is a study of the effects of exposure to bacteria during the birth process. At 95% gestation, rabbits are inoculated intra-vaginally with streptococci group B. After delivery, the pups are observed for up to 96 hours for signs of infection and are then euthanized. The does are observed for up to 7 days and then euthanized. In other experiments, timed pregnant rabbits are inoculated intra-cervically with Group B streptococcus (type 1a), Escherichia coli and Prevotella bivirus. The pups are euthanized upon delivery and the does are observed for up to 7 days for signs of infection and then euthanized. Finally, timed pregnant rabbits (70 % gestation) are inoculated intra-cervically with E. coli and treated with ampicillin. Some animals also receive IL-1ra as a therapeutic intervention. At 1, 3 or 5 days after inoculation, the animals are euthanized

Explanation of Reasons Why Pain- or Distress- Reliving Drugs Were Not Used:

It is important to understand the risk of maternal and newborn infection. Therefore, it is necessary to allow the experiment to continue until it can be determined whether or not the does and neonatal rabbits become infected by exposure to bacteria

during the birth process. Vaccines or antibiotics given to mothers before delivery may be an effective treatment. The difference in outcome of animals given vaccines or antibiotics and those not treated is the focus of these studies.

3. Guinea pigs exposed to bacteria infection - 39 guinea pigs

Description of Procedures:

This protocol uses an otitis model in guinea pigs. Otitis externa is induced bilaterally in anesthetized guinea pigs by inoculation of both ears with suspensions of one of three microorganisms. Studies are conducted by singular infections using 1) *Staphylococcus aureus*; 2) *Pseudomonas aeruginosa*; and 3) *Malassezia pachydermatis*. The guinea pigs are examined daily. During establishment of the model, the animals are re-anesthetized and the ears examined on days 3, 7, 9, 13, 17 and 22. All ears are cultured, and examined and graded for 1) inflammation; 2) edema; and 3) debris accumulation. Experiments are concluded at 22 days after initiation of infection. All animals are then euthanized by an overdose of anesthetic.

Explanation of Reasons Why Pain- or Distress- Reliving Drugs Were Not Used:

The animals in this model, as reported, show mild lethargy and irritability at the height (6-7 days after inoculation) but this is a transient behavior which resolves as the otitis external resolves. Inflammation is one measured data point; therefore masking it with analgesics or anti-inflammatory agents is contraindicated.

4. Decapitation without prior anesthesia in guinea pigs – 53 guinea pigs

Description of Procedures:

Bradykinin affects many different tissues in the body. For effective drug development, new antagonists must be tested in a standard "classic" assay system. In this protocol, guinea pigs are euthanized by decapitation without prior anesthesia. Segments of the terminal ileum are then removed and hung in a tissue bath. Tissue responses are standardized with bradykinin, and then new potential antagonists are applied to the tissue to see if they block the action of the next standard ED₅₀ dose of bradykinin applied to the tissue.

Explanation of Reasons Why Pain- or Distress- Reliving Drugs Were Not Used:

Bradykinin is a peptide hormone involved in causing many serious kinds of inflammation, such as septic shock. The Investigators are developing new, more potent bradykinin antagonists as potential new drugs for these conditions. Isolated guinea pig ileum is the classical standard assay system for bradykinin. In order to compare results

with new compounds, they must first be tested in this system. No one has described a more humane procedure that doesn't require anesthesia. Anesthesia adversely affects the response of the tissue. This has been demonstrated in the Investigators' laboratory, as well as in other laboratories. Additionally, the Investigator has tried using carbon dioxide anesthesia and found that the stress caused by this process causes bradykinin to be released in the tissues, such that an adequate baseline cannot be obtained.

5. Maternal-Infant separation in non-human primates - 6 mothers and 6 infants (2 *M. nemistrima* + 2 infant, 4 *M. radiata* + 4 infants) (Total = 12 primates)

Description of Procedures:

When infants are 6 months old, mothers are removed from the social group for one separation period that lasts two weeks. During this time the infant is immunized with tetanus toxoid and blood is sampled biweekly. The infant remains with its social group during separation.

Explanation of Reasons Why Pain- or Distress- Reliving Drugs Were Not Used:

It is the effect of maternal-infant separation, which is being studied, so any psychoactive intervention to relieve the behavioral impact would negate the results of the study.

6. Parkinsonian Syndrome in non-human primates - 3 monkeys (*M. radiata*)

Description of Procedures:

The Parkinsonian syndrome is induced when MPTP-HCL is infused into the carotid artery to produce a stable unilateral lesion in the monkey. A dose of 0.8 mg/kg MPTP-HCL dissolved in 50 cc of sterile normal saline infused into the carotid artery over 20 minutes leads to unilateral dilation of the pupil and a weak arm and leg contralateral to the side of the lesion and sensory neglect on that side. The animals are infused at a rate of 2 ml/minute using a 30 gauge needle with the infusion in the direction opposite the normal arterial blood flow. Analgesics are given to all animals for any post-operative pain. The result of the surgical procedure is a weak arm and leg and sensory neglect on the side opposite the lesion. (Water bottles are adjusted for this disability.) Thus, once monkeys have been lesioned, abilities such as locomotion, visual fields, grasping, climbing, etc. are impaired. In addition, the lesioned animals are sensitive to sound and have an enhanced startle response. After the lesioning procedure has produced the hemiparkinsonian effect, each animal is assessed daily for any pain. L-dopa is given as needed to assist the animal in daily routine procedures. In addition, monkey's food intake is carefully assessed and animals are hand fed if necessary until they have learned to adapt to their limitations. Daily fruit, sunflower seed, pomegranate seeds, peanuts, etc., are

provided to occupy their foraging behavior. The post transplant state lasts about six to eight months. As the animals become more adept with their routine movements, more foraging materials and additional toys are introduced.

Explanation of Reasons Why Pain- or Distress- Reliving Drugs Were Not Used:

To study the effective treatment of Parkinson's disease, an animal model of the disease is essential. There are currently no effective long-term treatments for this disease and therefore no way to completely eliminate the distress that may be associated with the physical limitations imposed by this disease. It is the goal of this study to test a treatment that may effectively cure the monkeys and, ultimately, human beings.

EXCEPTIONS TO REGULATIONS

The IACUC has approved an exception to the policy regarding multiple surgeries, specifically the placement of maternal and fetal catheters in sheep. The goal of the protocol is to determine how fetal glucose and plasma insulin availability regulate fetal energy and amino acid metabolism and thereby lead to changes in fetal growth. For the 2-3 week chronic studies, an initial surgery is done to catheterize the mother's femoral artery and vein. The catheters allows the Investigators to produce, by IV infusion, the necessary metabolic conditions (e.g. insulin-induced hypoglycemia; glucose induced hyperglycemia). The fetus is too small to catheterize at this time, and maintaining patency of fetal catheters for more than 2 weeks is very difficult. Thus, a second surgery to place uterine and fetal catheters is done when the fetus is big enough and close enough to final study. The fetal catheters are then used for infusions in both hyperglycemic and hypoglycemic studies. Within the last reporting period, twenty-nine sheep have had multiple surgeries for placement of maternal and fetal catheters.

The USDA Sector Supervisor has approved an exception to the policy regarding multiple survival surgeries, specifically multiple Cesarean sections in Bonnet monkeys (letter dated 6/29/94). There is currently a moratorium on the importation of Bonnet monkeys. Therefore, multiple surgeries will use the fewest possible number of a rare species. No multiple Cesarean sections were performed during this reporting period under this exception. Furthermore, no non-human primates received a Cesarean section in the past year.

Explanation of Column "E" Entries

Oread seeks to recognize all instances of unrelieved pain and/or distress in animals. The majority of the animal studies conducted at Oread are for the purpose of safety assessment of potential new drug candidates. Among the guidelines that describe the types of studies that must be conducted with new drug candidates are:

1. Guidance for the Industry: Single Dose Acute Toxicity Testing For Pharmaceuticals (61FR43934), Center for Drug Evaluation and Research (CDER), FDA, August 1996.
2. Non-Clinical Safety Studies for the Conduct of Human Clinical Trials for Pharmaceuticals, International Conference on Harmonization of Technical Requirements for Registration of Pharmaceuticals for Human Use, July 1997.
3. Information on the Guidelines of Toxicity Studies Required for Applications for Approval to Manufacture (Import) Drugs (Part 1), Ministry of Health and Welfare (Japan), February 1984.
4. Toxicological Principles for the Safety Assessment of Direct Food Additives and Color Additives Used in Food ("Redbook II") (draft), US FDA Center for Food Safety and Applied Nutrition, 1993.

The US FDA and similar world-wide regulatory bodies generally expect safety studies submitted in support of a new drug candidate to describe adverse effects (i.e., toxicity) in animals that may be predictive of clinical toxicities. Such expectations are explicit in the referenced guidelines as per these examples:

"The test compound should be administered to animals to identify doses causing no adverse effect and doses causing major (life-threatening) toxicity" (Ref. 1).

NOV 22 1999

EY:.....

"The goals of the non-clinical safety evaluation include a characterization of toxic effects with respect to target organs, dose dependence, relationship to exposure, and potential reversibility" (Ref. 2).

"In subacute toxicity studies...(a) toxic dose should cause death in some of the animals or apparent toxic sign..." (Ref. 3).

"For all oral toxicity studies...the high dose should be sufficiently high to induce toxic responses in test animals" (Ref. 4).

Oread maintains vigilance over the condition of animals on study, with 24-hour availability of clinical veterinary care and/or designated back ups. When toxicity is encountered, the attending veterinarian has ultimate authority to administer euthanasia. However, such authority is rarely taken without careful consideration with the designated Study Director on the scientific purposes of the study. While no study is ever conducted which relies on death as an endpoint, the guidelines make it clear that descriptions of life-

16R0014

threatening toxicity are required, and that we often must allow animals the opportunity to recover from severe toxic effects. Further, the exploratory nature of the work we do combined with the necessity to dose to overt toxicity sometimes leads to unpredicted reactions.

Therefore, there have been occasions, as reported in Column "E", when the decision to euthanize an animal was not reached quickly enough to prevent spontaneous death.

Oread recognizes such instances must be minimized, even if they cannot be eliminated entirely. Examples of on-going or completed activities designed to minimize the incidence of Column "E" events are:

1. Establishment of a "crash kit" of emergency medications and equipment made available to the vivarium staff so as to aggressively intervene when an animal becomes distressed.
2. Establishment of an objective list of clinical criteria which will prompt a consultation between the attending veterinarian and the study director to consider intervention alternatives.
3. Training of study directors to increase awareness of clinical indicators for intervention activity.

Additionally, in response to an USDA inspection, a decision was made by the IACUC that effective May 10, 1999 a new system would be implemented in which all high-dose and dose range-finding animals would be automatically categorized as Category "E". As described above, the regulatory bodies governing safety assessment studies require that dose levels are pushed to upper limits thus it is likely that these animals may experience some degree of pain and/or distress (e.g., lethargy, emesis).

Attachment to APHIS form 7023 for the University of South Florida, 1999

As required by Section 13 of the Animal Welfare Act and further explained in 9 CFR Part 2, Section 2.36, the University of South Florida submits an annual report (APHIS form 7023) to the Animal Care Regional Director, and fully explains in statements attached to this form any entries made in Column E.

In the 1998-99 annual report for this institution, 38 rabbits are listed under Column E. These animals represent two separate protocol(s).

Twenty rabbits were used in evaluations of the pharmacologic prevention and therapy of cardiomyopathy, which develops as a complication in some pediatric cancer patients treated with the chemotherapeutic drug doxorubicin. When administered to patients, doxorubicin is known to cause a reduction in their food intake. Similarly, rabbits treated with doxorubicin lose their appetite for milled chow. During this interval of anorexia, doxorubicin treatments are suspended, rabbits are fed 100 grams of fresh greens such as kale, regularly consume 25-75 grams of milled chow each day, and maintain their body weights. Pair-fed control rabbits that are not administered doxorubicin experience similar intervals of restricted food offering, but also do not lose weight. All twenty rabbits involved in this investigation are reported in Column E because this period of restricted food intake/offering could occur as part of this protocol.

Eighteen rabbits were used in evaluations of whether blocking E- and P-selectins influences therapy of ischemic paraplegia. These studies contributed to an understanding of optimal therapeutic approaches for spinal cord ischemia, injury, paresis and paralysis. All eighteen rabbits involved in this investigation are reported in Column I because the general discomfort associated with progressive paresis and/or paralysis cannot always be anticipated or thoroughly alleviated, hence the opportunity for discomfort existed as part of this protocol. Since six of these eighteen (33%) rabbits experienced clinical complications not anticipated in the written protocol including immediate post-surgical dehiscence, this investigation was closed by the IACUC, and this closure appropriately reported on April 23, 1999.

57R0023

November 19, 1999

Elizabeth Goldentyer, D.V.M.
USDA, APHIS Eastern Regional Office, Animal Care
Unit No. 3040
920 Main Campus Drive, Suite 200
Raleigh, NC 27606

Dear Dr. Goldentyer:

The 6,945 rabbits listed under Column E of our USDA Form 7023 were used to produce *Treponema pallidum* organisms for the diagnosis of syphilis. Under this IACUC approved protocol, number 4B, we infected rabbits with the organism, and allowed them to develop the disease for 10 to 12 days before euthanizing them. A post mortem harvest collected the *Treponema* spirochetes.

We may infer that the orchitis associated with *Treponema* infection caused some distress, but treatment of the disease would destroy, or impact, the organisms the procedure is intended to produce.

Sincerely,

A large, solid black rectangular redaction covers the signature area of the letter.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 33-R-0024
2. Number 55 of animals used in this study.
3. Species (common name) Hamster of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Spinal cord injury will be produced in a sterile surgical procedure. Although the procedure will not result in pain, the resulting period of nerve damage prior to repair will result in stress.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Therapeutic modalities will be tested with the aim of assisting nerve repair and aiding a return to full mobility. The addition of other drugs would not permit objective evaluation of these therapies.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 33-R-0024
2. Number 21 of animals used in this study.
3. Species (common name) Rabbit of animals used in this study.
4. Explain the procedure producing pain and/or distress.

A shunt is placed in the aorta, which will bypass spinal cord blood supply while leaving supply to kidneys and lower extremities intact. The intent is to simulate paraplegia associated with thoracic aneurysm, an associated complication of aneurysm surgical alleviation.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The experiment assesses new treatment modalities to provide limb movement past aneurysm. Although it is hoped that animals will regain full use of their hind limbs, partial or full paralysis is at least an option. The animals will be followed for 48 hours post-surgery and if full movement is not recovered, stress is unavoidable.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 33-R-0122
2. Number 687 of animals used in this study.
3. Species (common name) Guinea Pig of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Potency testing requirements for *Clostridium chauvoei*, and *Cl. haemolyticum* require that both vaccinated and non-vaccinated (Control) guinea pigs be challenged with virulent organisms as proof of the potency of the bacterin. The vaccinates must survive challenge while the controls must die.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Anesthetics and/or analgesics may not be used because they might interfere with the results.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

October 1, 1999

Dear Dr. Christensen:

The following information is submitted in fulfillment of requirement for submission of the Annual Report of Research Facility for Bayer Corporation Research Facility, registration number **48-R-004**. The VS Form 18-23 with signatures is attached.

ASSURANCE STATEMENTS

- 1 Professionally acceptable standards governing the care, treatment, and use of animals, including the appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, or experimentation were followed by the Bayer Corporation Research Facility and monitored by the Institutional Animal Care and Use Committee (IACUC).
- 2 Each principal investigator has considered alternatives to painful procedures. We perform tests in accordance with standards and guidelines outlined by the Environmental Protection Agency and the Food and Drug Agency regulations.
- 3 The facility is adhering to the standards of the Act, and that it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the IACUC. A summary of all such exceptions must be attached to the facility's annual report. In addition to identifying the IACUC-approved exceptions, this summary must include a brief explanation of the exceptions, as well as the species and number of animals affected. We have no exceptions to the standards and regulations of the Act.

The facility is Accredited by the American Association for Accreditation of Laboratory Animal Care and has been fully accredited since 1981. Our most recent site visit was October 28, 1998.

STATEMENT OF LOCATION

4 State the location of all facilities where animals were housed or used in actual research, testing, teaching or experimentation, or held for these purposes: Bayer Corporation Research Facility, Registration Number 48-R-004, Toxicology Building, Bayer Research Park, 17745 South Metcalf, Stilwell, Kansas, 66085-9104.

STATEMENTS OF ANIMAL USE

5 State the common names and the numbers of animals upon which teaching, research, experiments or tests were conducted involving no pain, distress, or use of pain-relieving drugs. Routine procedures (e.g. injections, tattooing, blood sampling) are reported with this group.

Dogs	324
Rats	9590
Mice	2830

6 State the common names and the numbers of animals upon which teaching, research, experiments or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.

Rats	168
-------------	------------

All procedures involving animal use within this facility are reviewed and approved by the Institutional Animal Care and Use Committee.

7 State the common names and the numbers of animals upon which teaching, research, experiments or tests were conducted involving accompanying pain or distress to the animals and for which the use of the appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used shall be attached to the annual report.

Animals are used for toxicological studies required by the FDA and EPA. The use of anesthetic, analgesic, or tranquilizing drugs would interfere with test results. Common types of toxicity tests we perform including oral dosing, dermal exposure and inhalation exposure, may cause periodic distress during the course of the test. All procedures involving animal use within this facility are reviewed and approved by the Institutional Animal Care and Use Committee prior to the initiation of the procedure.

48 R 0004

Guinea Pigs	250
Rats	2893
Mice	0

8 State the common names and the numbers of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.

No animals are bred, conditioned or held for test use. All animals are subject to a specific acclimation period prior to testing. Federal Agency test guidelines require animals of a specific weight or age. Every animal use is subject to Institutional Animal Care and Use Committee approval.

The facility is Accredited by the American Association for Accreditation of Laboratory Animal Care and has been fully accredited since 1981.

TOXICOLOGY

Date : October 1, 1999 ID : USDA.rsp9

Subject: Response to Column "E" items - Addendum

From : [REDACTED] Phone: [REDACTED]

(b)(6)
(b)(7)(c)

To : Dr. Walter A. Christensen

All protocols which cause animals to experience pain or distress without drugs are examined by the IACUC. These tests are done in compliance with Federal test guidelines cited below.

Registration Number 48-R-004

The following test is performed using Guinea Pigs:

Dermal Sensitization: (Buehler Protocol) applies to all guinea pigs.

Animals' back are clipped free of hair. The test substance is applied to a Webril patch(2cmx2cm) which is then applied to the clipped area. The patch forms an occlusive seal. The animal is then wrapped with bandages to ensure adherence of the patch. Each application is left on for at least 6 hours. This procedure is performed on days 0, 7 and 14, then observed until day 28. Animals are graded for irritation index. Some animals may be rechallenged. Animals experience distress from the wrapping, as well as irritation from test compound. Corrosive or caustic agents are not tested.

Number of Animals used in this study type: 250

Species of Animals used in this study type: *Cavia Porcellus*

Test Guidelines:

The protocol was designed based upon its acceptability according to: US-EPA-OPPTS , Health Effects Test Guidelines, OPPTS 870.2600, August, 1998
OECD Guideline for Testing of Chemicals, Section 4, Guideline 406, February 1987

48R 0004

The following tests are performed using Laboratory Rats:

Acute Oral Toxicity:

Food is withheld from the animals overnight prior to the day of dosing. Dosages are calculated based upon body weight. The test substance is administered by gavage as a single dose, with dose volumes not to exceed 20 ml/kg body weight for aqueous preparations, and 10 ml/kg body weight for nonaqueous preparations. Animals are observed by certified Laboratory Animal Technicians. Animals may experience distress and pain associated with administration and the toxicity of the test article.

Number of Animals used in this study type: 679

Species of Animals used in this study type: *Rattus norvegicus*

Test Guidelines:

The protocol was designed based upon its acceptability according to: US-EPA-OPPTS , Health Effects Test Guidelines, OPPTS 870.1100, August, 1998
OECD Guideline for Testing of Chemicals, Section 4, Guideline 402, February 1987

Acute Inhalation Toxicity Study

Evaluation of inhalable material during a 4-hour exposure and a 14-day post-exposure period. Animals experience restraint in plastic tubes which allow for nose-only exposure to inhalable material. Drugs are not used due to their possible effect upon respiration rate.

5-Day Repeated Inhalation Toxicity Study

Evaluation of inhalable material during a daily 6-hour exposure for 5 consecutive days. Animals experience restraint in plastic tubes which allow for nose-only exposure to inhalable material. Drugs are not used due to their possible effect upon respiration rate.

Number of Animals used in this study type: 316

Species of Animals used in this study type: *Rattus norvegicus*

Test Guidelines:

The protocol was designed based upon its acceptability according to:US-EPA-OPPTS , Health Effects Test Guidelines, OPPTS 870.1300, August, 1998
OECD Guideline for Testing of Chemicals, Section 4, Guideline 403, February 1987

Acute Dermal Toxicity

Animals' backs are clipped free of hair. The test substance is applied to a pad equal to 10 per cent of the rat's body surface area, which is then applied to the clipped area. The patch forms an occlusive seal. The animal is then wrapped with bandages to ensure adherence of the patch. Each application is left on for at least 24 hours. Elizabethan collars may be used to prevent ingestion of the test substance. Animals are observed for signs of irritation. Animals experience distress from the wrapping, as well as irritation depending upon the test compound. Corrosive or caustic agents are not tested.

Number of Animals used in this study type: 680

Species of Animals used in this study type: *Rattus norvegicus*

Test Guidelines:

The protocol was designed based upon its acceptability according to:US-EPA-OPPTS , Health Effects Test Guidelines, OPPTS 870.1200, August, 1998
OECD Guideline for Testing of Chemicals, Section 4, Guideline 402, February 1987

Acute Oral Neurotoxicity Screening

Food is withheld from the animals overnight prior to the day of dosing. Dosages are calculated based upon body weight. The test substance is administered by gavage as a single dose, with dose volumes not to exceed 20 ml/kg body weight for aqueous preparations, and 10 ml/kg body weight for nonaqueous preparations. Animals are observed for neurobehavioral signs by certified Laboratory Animal Technicians. Animals may experience short-term distress and pain associated with the administration and toxicity of the test article. Drugs would influence the behavior of animals engaged in the study.

Acute Dermal Neurotoxicity Screening

Animals' backs are clipped free of hair. The test substance is applied by pipette in a single dose to a area equal to 10 per cent of the rat's body surface area. Animals are observed for signs of neurotoxicity. Animals experience short-term distress from the shaving, as well as possible irritation, depending upon the test compound. Corrosive or caustic agents are not tested.

Number of Animals used in this study type: 1218

Species of Animals used in this study type: *Rattus norvegicus*

Test Guidelines:

The neurotoxicity protocols were designed based upon their acceptability according to:US-EPA-OPPTS , Health Effects Test Guidelines, OPPTS 870.6200, August, 1998
OECD Guideline for Testing of Chemicals, Section 4, Guideline 424, March 1997

**BAYER CORPORATION - TOXICOLOGY
ANNUAL REPORT OF REGISTERED RESEARCH FACILITIES**

Animal Welfare regulations require that all Registered Research Facilities file an "Annual Report of Research Facility" by December 1 of each year. The reporting period is for the Federal fiscal year, **October 1, 1998 through September 30, 1999**. These requirements are found in the Animal Welfare Act, 9 CFR, Section 2.36.

The regulations are found below:

The reporting facility shall be that segment of the research facility, or that segment ... that uses or intends to use live animals in research, tests, experiments, or for teaching. Each reporting facility shall submit an annual report to the APHIS, AC Sector Supervisor for the State where the facility is located on or before December 1 of each calendar year.

The report shall:

- 1 Assure that professionally acceptable standards governing the care, treatment, and use of animals, including the appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by the research facility;
- 2 Assure that each principal investigator has considered alternatives to painful procedures;
- 3 Assure that the facility is adhering to the standards of the Act, and that it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the IACUC. A summary of all such exceptions must be attached to the facility's annual report. In addition to identifying the IACUC-approved exceptions, this summary must include a brief explanation of the exceptions, as well as the species and number of animals affected;
- 4 State the location of all facilities where animals were housed or used in actual research, testing, teaching or experimentation, or held for these purposes;
- 5 State the common names and the numbers of animals upon which teaching, research, experiments or tests were conducted involving no pain, distress, or use of pain-relieving drugs. Routine procedures (e.g. injections, tattooing, blood sampling) should be reported with this group;
- 6 State the common names and the numbers of animals upon which teaching, research, experiments or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used;
- 7 State the common names and the numbers of animals upon which teaching, research, experiments or tests were conducted involving accompanying pain or distress to the animals and for which the use of the appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. An explanation of the procedures producing pain or distress in these animals and the

48R0004

reasons such drugs were not used shall be attached to the annual report;
8 State the common names and the numbers of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: _____

2. Number 22 _____ of animals used in this study.

3. Species (common name) guinea pig _____ of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Twenty-two guinea pigs were used to determine the relative toxicity of cholinesterase inhibiting compounds. These animals were tested either by intramuscular injection or by inhalation of a vapor or particulate material. Animals dosed in this manner were placed in the unalleviated pain or distress category.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Anesthetics, analgesics or tranquilizers could not be used for the relief of pain in the post-exposure phase due to their ability to interfere with the physiological effects of the test article. Anesthetics, analgesics and tranquilizers may act as respiratory depressants and could potentiate the toxic action of test compounds. External stimuli and manipulation were minimized to decrease any associated anxiety. The Institutional Animal Care and Use Committee approved these studies and any subsequent protocol amendments. Experienced staff veterinarians were on site to monitor study conduct and any animal welfare concerns.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

1. A total of 45 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs receive a convulsive dose of nerve agent which is thought (but not documented) to cause some pain and/or distress due to the intense physical activity caused by the seizure. There is a potential for the pain and/or distress to be relieved to some extent by the administration of one of the test drugs that successfully terminates the seizure.
3. Justification: Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest (Marshall and Wollman, 1985), the synthesis and release of brain neurotransmitters (Beleslin and Polak, 1965; Ngai *et al.*, 1978; Hanin, 1978), and/or the toxicity of the nerve agent (Clement, 1984) and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive.
4. No federal regulations mandate this procedure.

Protocol 2

1. A total of 9 column "E" guinea pigs were utilized in this study.
2. **Painful procedure:** The guinea pigs receive a dose of soman which results in seizure activity. Seizure activity may or may not be associated with motor convulsions, and if present, these convulsions will most likely bring about some degree of pain or discomfort. However, it has been suggested that animals are unresponsive during seizure activity and may not be aware of pain or distress. Thus, the worst case scenario is assumed.
3. **Justification:** To meet the objectives of this project, in terms of relevance to actual field conditions, it is critical that anticonvulsant drugs be evaluated in a model in which seizure activity is ongoing. The presence of anesthetics or analgesics will confound the data making it impossible to distinguish analgesic/anesthetic-induced perturbation from real differences. Thus, the administration of anesthetics or analgesics for this particular study will be counterproductive to the overall goals of the project.
4. No federal regulations mandate this procedure.

51F0006

10/27/99

Protocol 3

1. A total of 6 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs will receive a convulsive dose of the nerve agent soman, which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.
3. Justification: The use of anesthetics and/or analgesics would result in misleading information regarding the role of mast cell mediated anaphylactoid reactions/mast cell degranulation in acute organophosphorous poisoning. Anesthetics/analgesics also have profound effects on brain function that can interact with the toxicity of the nerve agent and thus complicate interpretation of the results.
4. No federal regulations mandate this procedure.

51F0006

12/21/99

1. A total of 231 column "E" guinea pigs were utilized in this study.

2. **Painful procedure:** Both species receive a convulsive dose of nerve agent which is thought (but not documented) to cause some pain and/or distress due to the intense physical activity caused by the seizure. There is a potential for the pain and/or distress to be relieved to some extent by the administration of one of the test drugs that successfully terminates the seizure.

3. **Justification:** Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest (Marshall and Wollman, 1985), the synthesis and release of brain neurotransmitters (Beleslin and Polak, 1965; Ngai *et al.*, 1978; Hanin, 1978), and/or the toxicity of the nerve agent (Clement, 1984) and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive.

4. No federal regulations mandate this procedure.

DEC 21 1999

51 F0006

12/21/99

1. A total of 18 column "E" guinea pigs were utilized in this study.

2. **Painful procedure:** The guinea pigs receive a dose of soman which results in seizure activity. Seizure activity may or may not be associated with motor convulsions, and if present, these convulsions will most likely bring about some degree of pain or discomfort. However, it has been suggested that animals are unresponsive during seizure activity and may not be aware of pain or distress. Thus, the worst-case scenario is assumed.

3. **Justification:** To meet the objectives of this project, in terms of relevance to actual field conditions, it is critical that anticonvulsant drugs be evaluated in a model in which seizure activity is ongoing. The presence of anesthetics or analgesics will confound the data making it impossible to distinguish analgesic/anesthetic-induced perturbation from real differences. Thus, the administration of anesthetics or analgesics for this particular study will be counterproductive to the overall goals of the project.

4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 3

1. A total of 18 column "E" guinea pigs were utilized in this study.

2. Painful procedure: Guinea pigs will receive a convulsive dose of the nerve agent soman, which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.

3. Justification: The use of anesthetics and/or analgesics would result in misleading information regarding the role of mast cell mediated anaphylactoid reactions/mast cell degranulation in acute organophosphorous poisoning. Anesthetics/analgesics also have profound effects on brain function that can interact with the toxicity of the nerve agent and thus complicate interpretation of the results.

4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 4

1. A total of 337 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs receive a potentially convulsive dose of the nerve agents to be evaluated, and death from nerve agent intoxication is the primary endpoint of this protocol.
3. Justification: Death from nerve agent exposure is aesthetically unpleasant and probably painful to the animals due to the intense physical activity caused by the seizures. However, quantitative evaluation of nerve toxicity and the efficacy of therapeutic countermeasures requires exposure to anesthetics or analgesics to relieve pain would lead to an erroneous evaluation of the toxicity of these agents and the efficacy of pretreatment, treatment, and decontamination procedures.
4. No federal regulations mandate this procedure.

DEC 21 1999

Protocol 5

1. A total of 328 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs receive a convulsive dose of the nerve agent soman which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.
3. Justification: The pain may be relieved to some extent by administration of one of the test drugs that successfully terminates the seizure. Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest and/or the toxicity of the nerve agent and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive. Since the goal of the study is to evaluate the ability of novel anticonvulsant drugs to treat nerve agent-induced seizures, subjecting the animals to nerve agent intoxication that elicits seizures is essential.
4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 6

1. A total of 24 column "E" non-human primates were utilized in this study.
2. Painful procedure: All monkeys receive a convulsive dose of the nerve agent soman, which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.
3. Justification: The pain may be relieved to some extent by administration of one of the test drugs that successfully terminates the seizure. Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest and/or the toxicity of the nerve agent and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive. Since the goal of the study is to evaluate the ability of novel anticonvulsant drugs to treat nerve agent-induced seizures, subjecting the animals to nerve agent intoxication that elicits seizures is essential.
4. No federal regulations mandate this procedure.

DEC 21 1999

51 F 0006

12/21/99

Protocol 7

1. A total of 12 column "E" non-human primates were utilized in this study.
2. Painful procedure: Non-human primates may experience pain or distress due to exposure to cyanide.
3. Justification: Untreated cyanide administration induces rapid unconsciousness and death. Several authors have argued that this is painless and does not induce stress, and may actually produce analgesia (Tadic, 1992), while others have suggested that it does induce pain or distress (Potter, 1950). Recovery from cyanide intoxication may induce stress. The investigators believe that pretreatment with WR242,511 will prevent death. The efficacy of WR242,511 cannot be determined unless these animals are challenged with a potentially fatal dose of cyanide. However, it is not certain that these animals will not experience pain or distress as a result of the non-fatal cyanide exposure. The investigators have no other choice but to expect that cyanide administration may be painful/distressful.
4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 8

1. A total of 822 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs are exposed to various organophosphorus (OP) compounds.
3. Justification: Anesthetics and analgesics cannot be used in any of the procedures involving OP administration and/or pretreatment and treatment with any of the medical countermeasures. These procedures require exposure to near lethal and lethal doses of OP compounds in live unanesthetized animals. One of the principal effects of OP intoxication is respiration paralysis. This is also a major side effect of anesthetics and analgesics. Conducting these experiments under anesthesia or analgesia could lead to faulty interpretation of the toxicity data and/or the effectiveness of the countermeasures because of the synergistic respiratory depressant effects of these drugs with OPs.
4. No federal regulations mandate this procedure.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

-
1. Registration Number: 51-R-0025
 2. Number 4 of animals used in this study.
 3. Species (common name) Rabbit of animals used in this study.
 4. Explain the procedure producing pain and/or distress.

The rabbits were given an intravenous infusion (ear vein catheter) of a potential cancer chemotherapeutic drug to get some base line data on potential adverse side effects as a result of the infusion. Preliminary data in rats involving bolus administration were used to determine the range of doses to use in the rabbits (based on body surface area). This protocol was the first opportunity to study the effects resulting from an intravenous infusion. Rabbits were given a continuous infusion of the drug until either adverse effects were seen or the total dose given. Effects seen at the high infusion rates included muscle tremors/weakness, labored breathing, pupillary dilation, salivation. If side effects were noted, the infusion was stopped immediately. Each subsequent rabbit was given a lower dosage rate until no adverse effects were noted.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The scientific purpose of the protocol was to determine if a continuous intravenous infusion of the chemotherapeutic drug would produce adverse side effects when given to a rabbit. Thus, it was necessary that clinical signs be allowed to occur. However, once signs did appear clinically, the infusion was stopped and the rabbit allowed to recover. Analgesics, sedatives or other such drugs could not be used since they would mask any clinical signs. Besides looking for adverse signs the investigator wanted to determine a potentially safe dosage rate and so several infusion rates needed to be tested. Four rabbits were used because each rabbit was used only once. If and only if the results of these in-vivo tests were promising would the investigator then pursue FDA approval.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

The 133 rabbits included in category E were used to produce polyclonal antibodies. The initial inoculation is in Freund's Complete Adjuvant with subsequent inoculations in Incomplete Freund's Adjuvant. All protocols are required to evaluate alternative test methods and adjuvants, and use the alternative method when available. These procedures have been approved by the IACUC. Currently, we have not found a topical analgesic for the injection sites.

Please refer to attached sheet.

14 R 0036

November 29, 1999

Enclosed please find the completed "Annual Report of Research Facility" (APHIS Forms 7023 and 7023A) for USDA registrant number is 14-R-0036 for the period 10/1/98 to 9/30/99.

Please note the following explanations for the numbers of animals (542 Syrian hamsters and 24 Siberian hamsters) placed in Column E of Form 7023 as required in the Animal Welfare Act, 9 CFR Ch. 1, Part 2, Subpart C, 2.31, d. 1. iv., A. These Syrian and Siberian hamsters are placed in this column because they did not receive post-operative analgesia. These animal models are used in neuroscience studies focusing on brain metabolism. The researchers have stated in their protocols and have found that many analgesic drugs will interfere directly or indirectly with the neurochemical data collected acutely after the surgery or later in the studies. The protocols for these studies have been reviewed and approved by the Institutional Animal Care and Use Committee (IACUC). The data collected during these studies include behavioral manifestations of induced alterations of neurochemical and metabolic pathways, and changes that are also reflected at the tissue, cellular, and/or sub-cellular levels determined after euthanasia. The protocols involve anesthesia, aseptic surgical technique to perform laparotomies (to remove hormone producing tissue), to place cannulae and/or administer known amounts of non-toxic hormones or cellular markers. The researchers maintain nursing records for these animals during and after the studies. The dedicated surgery area used by the researchers and their surgery records are inspected during the semi-annual IACUC inspections and at other times of the year.

An analgesic regimen, that the researchers and the attending veterinarian feel will not interfere with the neurochemistry, has been recently incorporated into protocols for the hamsters, so we expect the numbers in column E to decrease significantly during the next reporting period.

Thank you for your attention to these matters.

This report is required by the Animal Welfare Act and is to be subject to penalties as provided for in Section 215B, result in an order to cease and desist and to be subject to penalties as provided for in Section 215B.

ADDENDUM TO: ANNUAL REPORT FOR RESEARCH FACILITY
REGISTRATION No. : 12-R-005 (Diatide, Inc., 9 Delta Dr., Londonderry, NH 03053)
Re.: Explanation of animal care/use in Section E (APHIS form 7023)
Annual Report of Research Facility: fiscal 1998-1999

Those animals listed under Section E were rabbits used in an *E. coli* infection model to explore the ability of nuclear medicine imaging agents to identify focal infection sites. The protocol has been reviewed and approved by the Diatide IACUC.

The model requires rabbits to be inoculated with a specific amount of bacteria (*E. coli*) into the gastrocnemius muscle of the left (or right) hind leg. The infection is allowed to progress overnight to form an inflammatory focus. The animals are tested over a 2-12 hour period 18-48 hours after initiation of the inflammatory focus. The animals do not receive antibacterial or anti-inflammatory agents (steroidal or non-steroidal) as use of these agents inhibit/depress the uptake of the radiolabeled infection/inflammation-seeking agents. The animals have apparent, but mild, discomfort which is attributable to the inflammatory process, however, they are alert, mobile and the infection can resolve within several days. The model requires euthanasia (i.e., Somlethol®) at specific times after administration of the agents followed by complete necropsy, including the infection site, for determination of the percent of administered test article in tissues. Carcasses and tissues are disposed of per IACUC and radioactive materials approved protocols. The number of animals employed in this procedure over the past fiscal year (98-99) is 248.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

-
1. Registration Number: 22-R-0032
2. Number 18 of animals used in this study.
3. Species (common name) Dog of animals used in this study.

4. Explain the procedure producing pain and/or distress.

A total of 18 dogs used to evaluate drug candidates for clinical trials showed signs of toxicity. Thirteen dogs were given a cytotoxic chemotherapeutic drug for the treatment of cancer and 5 dogs were given a glucose lowering drug for the treatment of diabetes. During the studies, these dogs presented with clinical signs of inappetance, weight loss, lethargy, and diarrhea. The study design and procedures were conducted in accord with the guidelines established by global regulatory authorities including the Food and Drug Administration for drug candidates that are intended to proceed to clinical trials. All animals on these studies were observed daily by veterinary personnel and supportive therapy such as fluids and nutritional supplements were provided.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

NOV 15 1999

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Re: Registration Number 22-R-0036

Dear Dr. Goldentyer:

Listed below are comments to accompany the annual report of research facilities for site number 1.

One exception to the canine exercise program is to be reported. It involved the use of special canine metabolism cages for drug metabolism studies. The canine metabolism cages provide greater than 100%, but less than 200% of required space for exercise. The animals must remain in the cages for the proper and safe collection of the metabolites. The period of time is usually less than 10 days. Positive human interaction is greatly increased during this period. The protocols with the exemption are approved by the IACUC and reviewed during the semi-annual program review. The studies are infrequent and involved only twelve laboratory canines.

The environmental enrichment program has two exceptions for paired housing for nonhuman primates. Twenty-one squirrel monkeys and twenty-eight rhesus were housed separately for special study needs for controlling and monitoring food consumption as part of the research projects. Thirty-two cynomolgus monkeys were housed separately for brief periods for proper metabolite collection studies. All the animals are included in all the other aspects of the environmental enrichment program. The protocols with the exemption are approved by the IACUC and reviewed during the semi-annual program review.

Listed below are comments to accompany the annual report of research facilities for site number 2.

The dogs, rabbits and nonhuman primates listed in column "E" animals were used in federally mandated toxicological investigations for new drug development. Because one purpose of toxicologic studies is to define the pharmacokinetic and metabolic profiles of new entities, potential drug interactions are not known during the course of the studies. Administration of anesthetics, tranquilizers, and/or analgesics could result in additive toxicities which would be detrimental to the animal's well-being. In addition, the administration of such drugs could diminish the ability of the scientists to detect clinical changes which are critical to determining the toxicity of the compounds. These agents were, therefore, withheld in accordance with protocols which are carefully reviewed and approved by the IACUC.

All animals are carefully monitored and if found to be in severe pain and/or distress during the course of the study, they are provided humane euthanasia. Animals, in which adverse clinical findings were identified but were not determined by the Staff Veterinarian to be of a severe nature, were allowed to continue to the completion of the study, but are also reported in column "E" of this annual USDA report.

USDA Fiscal Year 1999 Exemptions from Site 2 for Animal Care and Use

Instances wherein animals were exempted from the pair-housing requirement of our program for the psychological well being of non-human primates. The duration of such exemptions varied according to the reason. The numbers of animals and reasons for such exemptions are herein listed:

23R0036

1. Non-human primates were exempted from social housing when required for collection of individual clinical signs and required randomization of the animals in studies. The exemption from social housing is variable and can range from 2 weeks to 6 months, depending on the duration of the individual study. All study protocols were reviewed and approved by the IACUC. 416

2. Primates exempted from social housing due to a transient medical condition as specified by the Staff Veterinarian, the duration of the exemption varies depending upon the medical condition. 25

3. Primates exempted from social housing due to being the documented aggressor in a pair housing situation on at least two occasions, these exemptions will be ongoing 2

There were 182 dogs exempted from our exercise program for dogs during the dosing period of studies where necessary to avoid emesis. All protocols including this exemption were reviewed and approved by the IACUC.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 21-R-0043

2. Number 137 of animals used in this study.

3. Species (common name) Chinchilla of animals used in this study.

4. Explain the procedure producing pain and/or distress.

During acute noise exposures, each animal is completely restrained in a specially-designed holder (Hargett, 1986) to prevent head and body movement which ensures the correct angle of incidence of the acoustic wave front to the animal's ear canal. The maximum duration of restraint in the acute exposures for each animal is less than two hours. Animals are not restrained during chronic exposures (6 to 24 hours per day) and are housed in standard animal cages (12.5"W x 16"L x 12.5"H) within the exposure room with food and water freely available.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The IACUC states that during the actual experimentation the animals are not administered anesthetic, analgesic, or tranquilizing drugs as such administration would have an adverse affect on the results of the testing procedures immediately following the experimental protocols. The noise exposures are not painful and are less severe than unprotected exposures experienced by military personnel (acute exposures) or by industrial workers (long-term exposures). Furthermore, anesthetics or analgesic agents with anesthetic effects will interfere with audiometric testing immediately following exposure. There is evidence that anesthetic or analgesic agents may significantly alter the response of the middle-ear reflex system to high-level

6. What, if any, federal regulations require this procedure? Cite the agency, stimulation (Price, the Code of Federal Regulations (CFR) title number and the specific section 1991).

Laboratory Animal Project Review (LAPR) explanations for Column E entries.

LAPR# 98-01-002, "Exposure of Guinea Pigs To Oxidants". Anesthetics, analgesics or tranquilizers could change the breathing patterns of the animals, which would compromise the "Nose Only exposure inhalation studies. Instead, animals will be acclimated by placing them in the exposure tubes for 30-60 minutes on the previous day to familiarize them with the tubes. The IACUC has observed and approved these procedures. Sixty six (66) animals have been used thus far.

Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

-
1. Registration Number: 23-R-0064
 2. Number 250 of animals used in this study.
 3. Species (common name) Mesocricetus auratus of animals used in this study.
 4. Explain the procedure producing pain and/or distress.
Hamsters undergo a 48 hour period of fasting.
No analgesics or anesthetics are administered.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

See attached sheet.

"Exemption from Feeding Standard"

EXEMPTION FROM FEEDING STANDARD

Explanation of the procedures for which anesthetics will not be given.

Since we are studying the nutritional and energetic signals that control reproduction, in some of our experiments, animals are food restricted or fasted. During fasting or food restriction, no anesthesia or analgesics are given because the animals are not in pain or distress. However, despite the fact that the animals are not in pain or distress, we have been asked to fill in the number of animals that are food restricted or fasted in the space labeled "E" on Interagency Report Control NO. 01800-DOA-AN.

In our experiments, hamsters are food restricted or fasted to the extent that estrous cycles are interrupted but are not restricted further. When animals are fasted or food restricted, effects on fertility and ovulation occur long before any other adverse health consequences (Merry and Holehan, 1979; Merson and Kirkpatrick, 1981, Bronson, 1989). This is because animals have a sensory system designed to detect internal energy availability (Schneider, 1992). The sensory detectors of fuel availability send signals to parts of the brain that control fertility and ovulation as well as those areas that control hunger, food intake and caloric homeostasis. My experiments are designed to study the mechanisms that underlie this link between energy and fertility. Thus, in most experiments, hamsters are fasted to a degree that induces infertility and anestrus, but not to a degree that causes health problems. This is possible because fertility is affected prior to any effect on general health. All of the available information on the effects of food deprivation in Syrian hamsters comes from work in my own laboratory or in the laboratories of Drs. George N. Wade and Lawrence P. Morin. For example, Dr. Morin (Morin, 1975; 1986) found that a 48 hour fast, but not a 24 or 36 hour fast, on days 1 and 2 of the estrous cycle induced anestrus, but this fast had no other health effects. NOTE: Hamsters have a 4-day estrous cycle with ovulation and estrous behavior occurring on Day 4. One important piece of evidence demonstrating that a 48 h of fast is not harmful to Syrian hamsters is that when the 48 hour fast occurs on Days 2 and 3, Days 3 and 4, or on Days 4 and 1 or the cycle, there is no effect on estrous cyclicity (the hamsters showed normal ovulation rates and vigorous sex behavior). Ovulation and estrous behavior are inhibited only when the fast occurs on Days 1 and 2 of the estrous cycle, but not on any other days. Morin also found that normal estrous behavior could be easily reinstated in the 48 hour fasted hamsters by giving an injection of estradiol. Furthermore, the effects on estrous cyclicity are rapidly reversed when the hamsters are returned to ad lib feeding. I subsequently demonstrated that the same 48 hour fast had no effect on estrous cyclicity or health in previously fattened hamsters (Schneider and Wade, 1989, Schneider and Wade, 1990). Thus, a 48 hour fast has no effect on estrous cyclicity whatsoever when the hamsters have a high body fat content. In general, the fatter the hamster, the longer the period of food restriction necessary to induce anestrus. As long as the hamsters have

23R0064

been fed ad libitum prior to the 48 h fast, there is little effect on fertility. Again, it is critical to understand that the effects on fertility occur prior to any generalized health problems. In my experiments, the most extreme form of caloric restriction will be a 60 h fast that occurs on days 1 and 2 of the estrous cycle. Body weight is recorded and general health condition is monitored daily. In addition to a fasted group, other groups will be fasted and injected (or infused) with metabolic fuels or nutrients to examine their role in maintenance of normal reproductive function. Hamsters in the laboratory tend to become obese as they grow older. In some experiments, obese hamsters will be restricted to 85% of their ad libitum intake for up to one week prior to the start of the experiment to insure that they are not too fat, but still show normal estrous cycles and no signs of poor health.

Analgesics are not appropriate because we are measuring indices of estrous cyclicity which is under control of hypothalamic luteinizing hormone releasing hormone (LHRH), also known as gonadotropin releasing hormone (GnRH). LHRH and LH levels are adversely affected by opiates because it is well-known that opiates and opiate derivatives, including analgesics such as buprenorphine, butorphenol and morphine, affect pituitary hormone secretion and hypothalamic LHRH (GnRH) secretion (2-12).

Column E Explanation

There were a total of 114 rabbits from 34 studies in Column E during this reporting period. These 34 studies were developmental and reproductive toxicity tests conducted for sponsors as required by the US FDA, US EPA or OECD government agencies. The federal regulations requiring these tests are cited on the attached pages.

Toxicity related to the product being tested resulted in the death of 114 rabbits. 31 rabbits were sacrificed due to adverse clinical observations associated with the toxicity and 83 rabbits were found dead while exhibiting normal to adverse signs associated with toxicity.

RE: Annual Report of Research Facility
Registration Number: 23-R-0099 / 363

Dr. Dr. Goldentyer:

This letter is to inform your office of our amended Annual Report numbers for guinea pigs and hamsters. The numbers listed below are the amended numbers.

A.	B.	C.	D.	E.	F.
Guinea Pigs	0	28	0	30	58
Hamsters	0	157	1	49	207

The 30 guinea pigs in Column E during this reporting period represent one phototoxicity/photoallergy study conducted for a sponsor as required by the US FDA and the OECD government agencies. These guinea pigs received Freund's Complete adjuvant and were euthanized on their scheduled date of sacrifice three weeks after the Freund's injection. The federal regulations requiring this test are cited on the attached pages.

The 49 hamsters in Column E during this reporting period represent a developmental toxicity and a developmental toxicokinetic study conducted for a sponsor as required by the US FDA government agency. Toxicity related to the product being tested resulted in adverse clinical observations (skin abrasions) in these hamsters. The observations were present for eight days prior to scheduled sacrifice. The federal regulations requiring these tests are cited on the attached pages.

In addition, we would like to inform your office of our name change. Primedica Argus Research Laboratories is one of four laboratories within the Primedica organization. Primedica Corporation, a wholly owned subsidiary of Genzyme Transgenic Corporation, provides preclinical contract research services to pharmaceutical and chemical companies. Primedica Argus Research Laboratories specializes in reproductive and developmental toxicology and photobiology testing and conducts safety and efficacy studies for sponsors. These studies are intended for submission to government agencies for product approval.

Thank you for reviewing this amended Annual Report for the reporting period of October 1, 1998 through September 30, 1999.

Sincerely,

(b)(6), (b)(7)(C)

Registration Number: 98-A024 Hurley

Number 38 total, 24 Column E of animals used in the study (during the reporting period).

Species Bovine (cattle)

Explain Procedures producing pain/ or distress:

The calves used in the study were monitored at 0, 4, 8, 12, 18, 24, 36 and 108 hours after birth to follow the distribution of maternal cells in their circulation and/or to evaluate the alloantigen response development of the calves. The animals had 2-3 ml of blood drawn from the juglar vein at each time point. Handling the animals and drawing blood this often over such a short period was the reason they were included among the column E animals. No other invasive or distressing procedures were conducted with these animals.

All calves were taken from the standing Dairy herd at SDSU.

Cows used in the study had multiple blood samples (4-8) of ~10ml drawn over a 10-14 day period to assess the degree of MHC relation among them. A subset of these animals were also drawn each day for use in the alloantigen evaluation listed above. The increased number of blood samples taken and increased handling of the cows over this short period was the only reason for inclusion under column E.

Provide scientific justification why pain/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.

To the best of our knowledge, there is no appropriate means to relieve the distress of the calves in being repeatedly handled that does not pose similar or greater problems to the animals than the blood drawing procedure undertaken. The animals would require further handling to administer drugs to sedate them and the blood drawing procedure generally proceeded quickly, requiring about 5-10 minutes per animal. The animals did not appear to suffer harm from the removal of blood itself. Therefore, no method was appropriate.

Similarly, the cows tolerated the handling and blood drawing quite well. It was only the frequency of handling and blood collection that was a concern to our committee. No treatment posing lower distress or hazard to the animals was available to relieve the stress of handling or the small discomfort of blood drawing.

46 R 0002

Column E Explanation

1. Registration Number: 98-A001
2. Number of animals used in this study: 27
3. Species (common name) of animals used in this study: Bovine

4. Explain the procedure producing pain and/or distress.

This project includes repeated blood sampling for serum neutralization assays on seven days over a 42-day period. Additionally this procedure involves challenge of animals with a virulent respiratory virus (PRSV).

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.

Repeated blood samples from these same animals is needed to monitor response to vaccination protocols over time. Pain and distress associated with virus challenge (PRSV) cannot be relieved without altering the expected clinical course and subsequent evaluation of vaccination protocol.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number.

Agency: APHIS CFR: 9CFR

Column E Explanation

1. **Registration Number:** 98-A014
2. **Number of animals used in this study:** 100
3. **Species of animals used in this study:** Pigs – adults, neonates and weaned
4. **Explain the procedure producing pain and/or distress.**

Pregnant gilts were inoculated intramuscularly at 90 days gestation with a virulent and avirulent strain of porcine reproductive and respiratory syndrome virus (PRRSV). The purpose was to evaluate the lack of virulence in a candidate vaccine strain of PRRSV by evaluating the presence of absence of disease in the gilts inoculated with the vaccine virus. Comparing the gilts given the vaccine candidate PRRSV with gilts given the virulence strain of PRRSV and gilts given a mock-inoculum did the evaluation of virulence. Pain and/or distress could include fever, inappetance, abortion or premature farrowing with stillborn and weak, live-born pigs.

Three- to six-day old pigs were inoculated either intranasally or intramuscularly with either a virulent or avirulent (candidate vaccine strain) form of PRRSV, and two commercially available live-attenuated PRRSV vaccines. Again, the purpose was to determine if the candidate vaccine virus induced disease and lesions in these pigs. The severity of the virulence of the candidate vaccine virus was determined by comparing these pigs with pigs given the virulent PRRSV, the commercial vaccines and mock-infected group. Pain and /or distress could include fever, inappetance, depression and potentially death.

5. **Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.**

The purpose of the experiment is to compare the virulence of a candidate vaccine strain of PRRSV, which should be less virulent than the parental virulent strain, to the disease and lesions induced by the virulent virus and two available commercial vaccines. There is no substitute system or host for the testing of PRRSV virulence other than the pig. It is necessary that we use both pigs and pregnant gilts, because the virus induces different syndromes in this age of pigs. A virus that does not induce disease in young pigs may not be safe for use in pregnant gilts.

Relief of pain or distress would either mask or reduce in severity the clinical parameters of fever, inappetance, depression and general body condition necessary for the evaluation of a candidate vaccine virus. Such relief of pain or distress may also reduce the severity of the lesions induced by the different PRRSV viruses.

We have determined that it is not necessary to use two different inoculum routes as previously outlined in this experiment. Thus, we have reduced the number of animals necessary to complete the experiment.

99-A007

Figs -- 11

NOV 30 1999

46R0002

The time course required for the development of disease is sufficiently long that factors that adversely affect animal appetite, mobility and other animal behaviors such as anesthetics, analgesic and tranquilizers would adversely affect experimental outcomes and would likely decrease animal survival from the infectious challenge. Medications that reduce intestinal distress physiologically would make experimental outcomes non-interpretable.

98-A029

Pigs -- 12

46R0002

The time course required for the development of disease is sufficiently long that factors that adversely affect animal appetite, mobility and other animal behaviors such as anesthetics, analgesic and tranquilizers would adversely affect experimental outcomes and would likely decrease animal survival from the infectious challenge. This is particularly true with regard to this study as the pigs are new-borns and must learn to drink from feed bowls. Medication that reduces alertness will attenuate the learning process and adversely affect the animal as well as the study. Medications that reduce intestinal distress physiologically would make experimental outcomes non-interpretable.

46R0002

Column E Explanation

1. **Registration Number:** 96-027 - [REDACTED]
2. **Number of animals used in this study:** 2
3. **Species of animals used in this study:** Bovine - calves
4. **Explain the procedure producing pain and/or distress.**

(b)(6),
(b)(7)(C)

Calves were orally inoculated with a virulent strain of bovine coronavirus. This virus replicates in the cells lining the small intestine and colon of the calf. The result of virus replication is the destruction of these cells and the induction of a malabsorptive diarrhea. The diarrhea develops within 48 hours after inoculation and persists for up to 7 days. Calves are monitored daily of signs of depression, fever, dehydration and loss of bodily flesh. Calves that appear to becoming severely dehydrated are treated with an oral electrolyte solution to reduce potential of death.

5. **Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.**

The calves were allowed to experience the typical disease induced by inoculation with the calf coronaviruses. Our goal was to induce diarrhea in these calves, which will also result in the shedding of coronavirus particles in the feces. This was necessary to provide the investigators with fecal samples from a known calf infected with coronavirus. These known samples are then used as positive controls in the development of a new diagnostic assay for the detection of bovine coronavirus. We could not interfere with the development of the disease because this would eliminate the shedding of virus in the fecal samples. We did not intend for calves to become moribund as the result of this disease, only to develop diarrhea for a limited period of time to allow for the collection of coronavirus contaminated feces.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

- 1 Registration Number: 63 — R — 005
2. Number 49 of animals used in this study.
3. Species (common name) canine (dogs) of animals used in this study.
4. Explain the procedure producing pain and/or distress.

The dogs are in category E because they are used in a study evaluating the effects of sepsis on glucose metabolism. In critically ill septic patients, glucose metabolism is significantly altered and understanding the underlying physiology would facilitate the management of these patients. The dogs are surgically instrumented with indwelling catheters under anesthesia. Several weeks later, in a second survival surgery, the dogs receive an intraperitoneal fibrin clot containing a titrated amount of E.coli. Other dogs receive a sterile fibrin clot. Following clot administration a glucose metabolism study is performed on the dogs. The category E designation is due to the fact that analgesics are not administered to dogs during the thirty-six hours following septic clot administration. Dogs treated with the septic clot may become febrile and lethargic during the thirty -six hour period.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

This potential pain/distress is not treated with analgesics. The investigator scientifically justified to the IACUC that the use of nonsteroidal anti-inflammatory analgesics and even opiod analgesics would modify the septic response. The investigator is very concerned about animal welfare and has titrated the dose of E.coli and sterile clot dogs based on clinical signs.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102): N/A

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

- 1. Registration Number: 95-F-0001
- 2. Number 13 of animals used in this study.
- 3. Species (common name) guinea pigs of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Starting at one to two days of age, neonatal guinea pigs are exposed to an atmosphere of 95% oxygen and 20 ppm nitric oxide for up to five days. Exposure to hyperoxia alone often produces respiratory distress after three to five days of exposure. Exposure to the combination of hyperoxia and nitric oxide may also result in respiratory distress. It should be noted that an early endpoint is used in this study: the guinea pigs are euthanized as soon as they progress beyond mild respiratory distress to develop cyanosis, lethargy, pallor, or abnormal resting posture.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The development of lung injury was a parameter being studied. Relief of any respiratory distress would have required anesthesia and intubation, both of which would have confounded the natural course of the pulmonary effects of hyperoxia and the potential mediating effects of nitric oxide. Furthermore, intubation and mechanical ventilation would potentially introduce barotrauma as a confounding source of lung injury. Literature searches failed to reveal an alternative to the use of animals to measure the whole animal physiological functions of interest.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Report to Accompany APHIS Form 7023 to support Column E listing (Unrelieved Pain or Distress)

All animal protocols were developed with input from the attending veterinary staff and reviewed by the IACUC to determine that all avenues of pain/distress relief were implemented where possible. Investigators must perform literature searches for alternatives to painful procedures, and the search strategy and results must be documented in every protocol. Those studies which required unrelieved pain were statistically designed to ensure that the least number of animals needed yield significant results were exposed to unrelieved pain or distress. Those animals experiencing unrelieved pain or distress were carefully monitored and given special husbandry provisions to provide as much comfort as possible (e.g., easy access to food and water, increased bedding). Any moribund animals were humanely euthanized as soon as possible so that they did not experience prolonged suffering.

EXPLANATION OF UNRELIEVED PAIN OR DISTRESS:Guinea Pigs -

Protocol 1 - The study of immune response to and protective efficacy of vaccine candidates directed against *shigella* requires an accurate evaluation of the immune response raised by the administration of these vaccines. The use of analgesics, particularly opiates or narcotics, result in immunosuppression, which would invalidate the results of experiments testing immune responses as well as increasing the severity of the possible eye infection, since immunized animals frequently develop either a mild infection or no infection at all. Use of analgesics that are anti-inflammatory (e.g. aspirin) would also invalidate the model since the PI is studying a model for inflammation of epithelial cells by bacterial invasion. The eyes are scored using a system of 1 to 3. In most cases animals will be euthanized as soon as it is apparent that a score of three is reached.

Protocol 2 - This is a Refinement (3Rs/alternatives) study to use with the Sereny test. To achieve the primary objective of the study (refinement through analgesics), a minimum number of control animals must be utilized. The potential immunomodulatory effects of buprenorphine, used in conjunction with the guinea pig keratoconjunctivitis model, have yet to be evaluated. If buprenorphine is found to alter the specific immunological parameters, as measured in conjunction with the Sereny test, then alternatives methods for controlling pain can be considered.

Hamsters -

The purpose of the protocol is to establish an animal model of diarrhea, therefore any discomfort due to diarrhea cannot be treated pharmacologically due to risk of interference with the symptomatology associated with the infection. Any animal developing signs of diarrhea will be immediately provided supportive fluid treatment to diminish any discomfort associated with diarrhea. Any animals demonstrating stage two diarrhea for 2 days or stage three diarrhea for 1 day will also be euthanized. In addition, hamsters will undergo the distress of a 24 hour fast. This is necessary in order to get the best dose response prior to inoculation in order to induce actual diarrhea.

Rabbits -

Following oral challenge with ETEC, rabbits may experience the discomfort of diarrhea and possible dehydration. However, the pain or distress caused by this non-surgical challenge procedure is far less than that of the more traumatic RITARD procedure. Supportive treatment will be provided (e.g. fluids provided orally, subcutaneously) however, since studies are concerned with the pathophysiology of bacterial enteritis no pharmacological agent will be used to reduce the discomfort of diarrhea due to risk of interference with symptomatology associated with the infection. The use of opiate analgesics may interfere with the diarrhea response by decreasing intestinal motility while non-opiate analgesics may interfere with the prostaglandin-mediated intestinal secretory mechanisms associate with the diarrhea response. One week after challenge, animals will be euthanized.

10 F 0002

Report to Accompany APHIS Form 7023 to support Column E listing (Unrelieved Pain or Distress)
WRAIR, Washington, DC 20307-5100

Pigs -

The lethal shock that is induced by the lethal SE-challenge with the LD50 test in the positive control animals will necessarily cause pain to these animals. But positive controls are required to validate results. Analgesics would impact the physiological parameters, exacerbating the lethal shock or emesis induced by the SE and compromising analysis of collected data. If the experimental drugs proved their utility, the animals should experience relief, but should they not experience relief then that indicates failure of the drug and is necessary for that reason. In all circumstances, the animals will be under constant veterinary care and will not be subject to any unnecessary pain.

Non-human Primates -

In humans, virulent *S. flexneri 2a 3457T* induces painful abdominal cramps and tenesmus accompanied by myalgia and fatigue. In general, unless the contrary is known or established, it should be assumed that procedures that cause pain in humans also cause pain in animals. Previous studies have shown that opioid down-regulation on the immune response. The potential immunomodulatory effects of buprenorphine have not been evaluated in the NHP model. A study to evaluate buprenorphine will be conducted along with the protocol. If it is not found to alter the specific immunological parameters as measured in this study, then alternatives methods for controlling pain can be deployed. Shigellosis is usually a self-limited infection in rhesus monkeys, and spontaneous recovery is expected after 48 to 72 hours of acute disease. Animals were continually evaluated by the veterinary staff. Guidelines were established to determine progression of illness. Once a certain point had been reached, supportive therapy was initiated.

E. Explanation of Procedures

Guinea Pigs, Mice

Fungal agents are administered IC into guinea pigs. Infected animals develop systemic infection. The clinical presentations are anorexia, lethargy, and finally death. Additional medications would interfere with evaluation of the efficacy of the drugs being studied.

Mice

The lifetime studies mice are allowed to die naturally without intervention to obtain valid statistical data on life spans.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 74-R-0012
2. Number 18 of animals used in this study.
3. Species (common name) guinea pig of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Guinea pigs will be injected with small volumes (0.1-0.2 ml) of either sterile saline or purified *E. Coli.* endotoxin (4mg/kg) diluted in sterile saline as a rapid IP injection. This procedure has been shown to produce no apparent initial discomfort or stress to the animal for several hours; animals move about, eat and drink freely. Within 5-6 hours, the signs and symptoms of circulatory depression begin to appear: low blood pressure, central nervous system depression, lethargy, and non-responsiveness to the environment. Our study involved evaluation of smooth muscle and cardiac contractile function and appropriate therapy throughout the various stages of endotoxemia. At various time periods following injection, guinea pigs will be euthanized and tissues (heart, aorta, and other vascular tissues) excised for study.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

All analgesics, anesthetics, and CNS depressants markedly alter and further depress this model, as well as affect the basic mechanisms of cardiac contractile function to be evaluated. This model is similar to the human septic shock state following bacteremic infection.

Databases searched: Medline

Dates searched (inclusive): 1966-present

Keywords: septic shock, endotoxemia, guinea pigs, analgesia, anesthesia.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

16 November 1999

USDA Registration No. 74-R-071

**The University of Texas Health Science Center at San Antonio
USDA Report 1998-99
Category "E"**

Eighteen (18) Dogs

Anti-cancer candidate drugs were administered to 18 dogs for regulatory (NDA or IND) toxicology studies. These dogs were included in category "E" due to the potential for adverse effects from the compounds. Anesthetics or analgesics were precluded because they would confound data on this strict regulatory protocol.

Forty (40) Guinea Pigs

Forty guinea pigs were infected with a dermatophyte in order to evaluate the efficacy of a new polymer containing a sustained-release antifungal compound in the treatment of superficial mycoses. The guinea pigs were included in category "E" due to the potential for skin irritation. Close observation revealed 23 of the 40 animals developed some level of skin irritation in each dog. Anesthetics or analgesics were not administered because they could confound the study.

Six (6) Dogs

Six dogs were used to evaluate basic fibroblast growth factor distribution in fracture sites. The distal end of one radius was fractured while the dogs were under surgical anesthesia. The injured limb was rigidly immobilized in a cast and the dogs allowed to recover from anesthesia. Buprenex was administered BID for pain. The dogs were euthanatized 52 hours post fracture. They were included in column "E" due to the potential for pain or distress, even with surgical anesthesia and post-operative analgesia.

IX. Write a brief description of the procedures to be utilized on the animals in your research project. Indicate any physical or physiological impairment or loss of function occurring to the animal from your procedure, i.e., diabetes, blindness, loss of motor abilities. Use additional paper if necessary and attach the methods and vertebrate animal portions from your grant proposal.

In these studies, the corneas of rabbits will be infected with the McKrae strain of herpes simplex virus type 1. Herpetic keratitis will be allowed to develop for 7 days prior to initiating therapy. During this time the rabbits will experience some pain and discomfort. The level of discomfort the animals experience is hard to quantify but they do not rub their eyes excessively, suggesting the discomfort is not severe.

Therapy with an antiviral agent and an anti-inflammatory agent will be initiated on day 7 post-infection and continued until days 14 to 20. The natural course of acute disease is symptomatic during the period of 3 to 20 days post infection. The disease is self-limiting and generally becomes asymptomatic in rabbits about 20 days post-infection.

It is necessary to allow the disease to develop untreated in order to mimic the human situation. Patients do not come for therapy until they become symptomatic. By this time, the immune/inflammatory response has been triggered and latent infection of the sensory nerves that serve the infected dermatome have been established.

The use of topical or systemic analgesics is not a viable option in these studies because HSV is a neurotrophic virus. Any treatment that includes drugs that alter nerve function could affect the outcome of experiments designed to evaluate antiviral/anti-inflammatory therapy. Similarly, studies of viral latency could be dramatically influenced by neuroactive drugs. Initiation of antiviral therapy on the day of infection or within a day or two of infection would prevent the disease from developing, thus negating the model.

APPLICATION FOR APPROVAL OF THE USE OF ANIMALS IN RESEARCH AND TEACHING

Principal Investigator: [REDACTED]

Date: 4/3/97

Page 2, supplement

NOT A FOIA DELETION

- III. b. If survival surgery is performed, outline postoperative care including use of analgesics and list the names of personnel who will provide the care.

I really don't know if the procedure of infection is considered surgery. Animals will be anesthetized as described below. After injection of virus in the subalveolar mucosa and/or intrastromally, rabbits will be observed hourly until ambulatory.

- III. e. Will there be any procedure that would cause the animal pain or discomfort greater than that caused by inducing anesthesia or drawing blood? (If yes, describe and justify.)

Rabbits are anesthetized with ketamine and xylazine and then given a primary herpetic infection by injection of 10^5 pfu of herpes simplex virus at the midline of the alveolar mucosa. A subclinical gingivitis, neutralizing antibody titer, and latent ganglial infection result from this primary disease. These animals demonstrate little pain or discomfort and eat normally. About 30 days post primary infection, the corneas of rabbits will be infected. The corneas of rabbits will be infected with herpes simplex virus type 1 by intrastromal injection of 20 microliters containing 10^3 pfu of virus. The intrastromal injection of virus may cause transient pain, but the animals will be anesthetized with ketamine and xylazine. The local anesthetic proparacaine will be used to reduce corneal sensation. Upon regaining consciousness the rabbits display no discomfort. Over the next 15 days the rabbits develop and recover from stromal keratitis. During this time they likely experience some reduced vision due to viral infection. HSV-1 is a neurotrophic virus which establishes latent infections in neurons. During latency, however, no pain or sense of latent infection is experienced by humans, and it is unlikely that animals experience pain. Because our studies focus on latency, no anesthetics can be given because they can affect the state of latency. The rabbits experience impaired vision with only about 2% developing monocular blindness. Bilateral blindness is very rare and, if it develops, the animal will be sacrificed. Administration of antivirals could defeat the purpose of the studies.

- V. a. Describe the applicable substance (i.e., infectious agent, isotope).

Herpes simplex virus type 1 is considered a Class II pathogen by NIH guidelines; therefore, containment is the principal issue. All procedures will be done in the assigned biocontainment room, and tissues removed from the room for further analysis will be contained for transport to our lab.

35R0029

APPLICATION FOR APPROVAL OF THE USE OF ANIMALS IN RESEARCH AND TEACHING
Principal Investigator: [REDACTED]
Date: 4/3/97

Page 3, supplement

NOT A FOIA DELETION

VIII. c. Animals will be used in a project involving pain or distress without administration of appropriate anesthetic, analgesic or tranquilizer drugs. (Attach a statement justifying why such drugs will not be used.)

The purpose of the proposed study is to determine the mechanism of latency of herpes simplex virus. The virus is a neurotrophic virus which establishes latency in the sensory nerves (in this case, the trigeminal ganglia) of the infected dermatome, and DNA persists at the site of infection in the dermatome (in this case, the cornea). Treatment or physical manipulation of these tissues may induce reactivation and thus disturb the latent state.

IX. Write a brief description of the procedures to be utilized on the animals in your research project. Indicate any physical or physiological impairment or loss of function occurring to the animal from your procedure, i.e., diabetes, blindness, loss of motor abilities. Use additional paper if necessary and attach the methods and vertebrate animal portions from your grant proposal.

Rabbits will be given primary herpetic infections by the injection of 10⁵ pfu of HSV-1 at the midline of the alveolar mucosa. About 30 days later the corneas of rabbits will be infected with HSV-1 by intrastromal injection of 1000 plaque forming units of virus in 20 microliters or an equivalent dilution of mock antigen. Prior to injection the rabbits will be anesthetized with 25 mg/kg ketamine and 5 mg/kg xylazine and 2 drops of 0.5% proparacaine per eye. Herpetic keratitis will be allowed to develop. Thus the animals will experience reduced vision for about 15 days. The keratitis will spontaneously resolve and latency will have been established. Any animals that become blinded will be sacrificed immediately. Our past studies tell us that it will be less than 1% with this virus. Other strains of virus produce blinding complications at much higher frequency. At varying time intervals between 40 and 120 days post infection, rabbits will be sacrificed using euthanasia solution (Beuthanasia-D). Immediately following death, tissues (corneal and trigeminal ganglia) will be taken for laboratory analysis.

35R0029

CONT.

In these studies, the corneas of rabbits will be infected with the McKrae strain of herpes simplex virus type 1. Herpetic keratitis will be allowed to develop for 7 days prior to initiating therapy. During this time the rabbits will experience some pain and discomfort. The level of discomfort the animals experience is hard to quantify but they do not rub their eyes excessively, suggesting the discomfort is not severe.

It is necessary to allow the disease to develop untreated in order to mimic the human situation. Patients do not come for therapy until they become symptomatic. By this time, the immune/inflammatory response has been triggered and latent infection of the sensory nerves that serve the infected deratome have been established.

The use of topical or systemic analgesics is not a viable option in these studies because HSV is a neurotrophic virus. Any treatment that includes drugs that alter nerve function could affect the outcome of experiments designed to evaluate antiviral/anti-inflammatory therapy. Similarly, studies of viral latency could be dramatically influenced by neuroactive drugs. Initiation of antiviral therapy on the day of infection or within a day or two of infection would prevent the disease from developing, thus negating the model.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

COLUMN "E" ANIMALS

Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery or tests.

DOGS

Procedure: 5-Day Oral Exploratory Toxicity Study in Dogs

Results: The drug being evaluated caused emesis intermittently during the course of the study. Medical intervention would have introduced uncontrolled variables into the study; thereby, rendering the results uninterpretable and/or requiring the study to be repeated with additional animals.

Number with Pain or Distress: 1 Dog

Procedure: 5-Day Oral Exploratory Toxicity Study in Dogs

Results: The drug being evaluated caused decreased motor activity, emesis and salivation for a short duration following drug administration over a period of 2 to 3 days. One animal exhibited tremors on the second day of dosing during the first hour. This observation was not evident thereafter. Medical intervention would have introduced uncontrolled variables into the study; thereby, rendering the results uninterpretable and/or requiring the study to be repeated with additional animals.

Number with Pain or Distress: 10 Dogs

Total Number with Pain or Distress: 11 Dogs

IACUC APPROVED EXCEPTIONS TO THE DOG EXERCISE PLAN

None

IACUC APPROVED EXCEPTIONS TO THE NONHUMAN PRIMATE PLAN FOR ENVIRONMENTAL ENRICHMENT

RECEIVED
NOV 22 1999
BY:

23R0011

Explanation of Category E

Non-human primates and cats were injected with MPTP to induce signs of Parkinson disease. Animals received careful monitoring and supportive care, but the development of neurologic signs was a necessary feature of this animal model that is required for this research program.

Reportable IACUC – Approved Exceptions

The only IACUC – approved exception to USDA regulations and the Guide was to allow water deprivation for non-human primates on a behavioral study of cognitive/motor function. The IACUC has established written guidelines for this procedure.

13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

23R 0016

NOV 15 1999

To: [REDACTED] } (b)(6), (b)(7)(C)
From: [REDACTED]
Subject: Reduction of sites at University of Pittsburgh
Date: July 27, 1999

EY:

This is in reference to the sites for University of Pittsburgh, 23-R-0016. I am deleting 9 sites bringing the University down to four sites.

Site # 001 merges the following sites:

- #001 - Lab Animal Resources
- #004 - Forbes quad
- #005 - Crawford/ Langley Halls
- #006 - Western Psych
- #007 - Hill Building
- #013 - Lhormer Building
- #015 - Bio Science Tower
- #016 - Montefiore
- #020 - Biotech/ Bioengineering

Site #008 Merges the following sites:

- #009 - Primate Research Facility
- #010 - Primate Rearing Facility

Address : 709 New Texas Rd.
Holiday Park, Pa 15239

Site# 18 remains - RIDC Park

Address : Environmental and Occupational Health
RIDC Park
260 Kappa Dr.
Blawnox, Pa 15238

Site #022 remains - Walter Whippo Farm
Enon Valley, Pa 16120

This consolidation leaves four sites active these are #001, #008, #018 and #022.

**EXPLANATION OF PROCEDURES
FOR CATEGORY E
23-R-0018**

Fifty-seven dogs were used in oral and intravenous toxicity tests to determine the safety of new pharmaceutical entities. Studies were designed to evaluate the toxicity of administered doses of test compounds. Use of anesthetics, analgesics or tranquilizers would have complicated interpretation of study findings and may have masked potential significant toxicities.

Fifteen primates were used in oral toxicity tests to determine the safety of new pharmaceutical entities. Studies were designed to evaluate the toxicity of administered doses of test compounds. Use of anesthetics, analgesics or tranquilizers would have complicated interpretation of study findings and may have masked potential significant toxicities.

Twenty-five rabbits were used in oral or intravenous toxicity tests to determine the safety of new pharmaceutical entities. Studies were designed to evaluate the toxicity of administered doses of test compounds. Use of anesthetics, analgesics or tranquilizers would have complicated interpretation of study findings and may have masked potential significant toxicities.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

FOOTNOTE KEY

- (A) Two (2) rabbits used in skin irritation studies necessary for product safety assessment experienced severe skin irritation during the conduct of testing. A measured amount of test material was placed on the shaved skin of the rabbit to determine the effect the materials would have on the integrity of the skin. In these instances, the materials were severely irritating to the skin. In the investigator's judgment these animals may have experienced pain after dosing and were reported as such on the 1999 annual report. The Study Director did not administer any analgesics prior to testing because it was not obvious that the material would cause the severity of irritation seen during the test. Use of the analgesics after the administration of the test material could potentially inhibit or enhance the presence of any toxicological signs and would have required additional animals to act as control groups for the analgesics. Finally use of analgesics may have an adverse effect on the acceptability of the data to world wide regulatory bodies for which these studies are conducted.

In each case the animals experiencing pain and suffering were euthanized as soon as the study protocols and testing guidelines allowed.

Our test methods for this study are consistent with the following:

US EPA OPPTS : Series 870.2500: Acute Dermal Irritation
OECD Guideline 404
Japan 59 NohSan No. 4200, Primary Dermal Irritation Study
ECC Directive 92/69/EEC B.4 .

23R0046

Annual Report of Research Facility

Reg. No. 23-R-046

November 1999

Explanation of exemption for animals reported in Column E on APHIS Form 7023

The principal investigators responsible for the 1999-2000 protocol entitled "Seasonal Adjustment of Metabolism and Behavior in Lemurs, Squirrel Monkeys, and Eastern Gray Squirrels" requested, and the Committee granted, an exemption from the normal procedures for the provision of gray squirrels with food. The Committee was satisfied that the deprivation resembles that commonly experienced by gray squirrels in the wild. In addition, it is substantially less severe than periods of food deprivation that have been well tolerated by squirrels in past research. Finally, the Committee was satisfied that the principal investigators will monitor body weight, behavior and other indices of general health, and will truncate the deprivation if any of these observations suggest that subjects are approaching their limits of tolerance.

APR 19 1999

23R0046

Annual Report of Research Facility

Reg. No. 23-R-046

November 1999

Explanation of exemption for animals reported in Column E on APHIS Form 7023

The principal investigators responsible for the 1999-2000 protocol entitled "Thermoregulation and Torpor in Gray Squirrels" requested, and the Committee granted, an exemption from the normal procedures for the provision of their subjects with food. The Committee was satisfied that the deprivation proposed overlaps that commonly experienced by gray squirrels in the wild. Furthermore, the principal investigators have included in their experimental procedures several safeguards that will reduce or eliminate the possibility of extreme deprivation, in that they will (a) restrict weight loss to a level known to be sustainable from prior studies, (b) allow at least 12 weeks between periods of deprivation, and (c) extend the period of deprivation gradually (within stated limits) over the course of the project. In addition, they (d) will collect daily observations of behavior and body temperature, (e) measure body weight before and after periods of deprivation, and (f) are prepared to truncate the deprivation if any of these observations suggest that subjects are approaching their limits of tolerance.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0

11. Pigs	0	0	0	0	0
12. Other Farm Animals	0	0	0	0	0
13. Other Animals	0	0	0	0	0

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

23R0107

Column E Explanation Form

-
1. Registration Number: 23R0107
 2. Number 196 of animals used in this study.
 3. Species (common name) guinea pig of animals used in this study.
 4. Explain the procedure producing pain and/or distress.

Animals are sensitized using complete Freund's adjuvant. This results in an inflammatory response with a scab at the site of injection.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The use of Pharmaceuticals to alleviate pain or distress may interfere with the compound being tested, thereby invalidating the data collected which would in turn require repeat testing and increase the number of animals utilized..

6. What, if any, federal regulations require this procedure? (Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Notification No. 698 issued by the Director-General of the Pharmaceutical Affairs Bureau of the Japanese Ministry of Health and Welfare (MHW) on May 30, 1980 entitled "Required Data for Application for Approval to Manufacture (Import) Drugs".

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

23R0107

Column E Explanation Form

-
1. Registration Number: 23R0107
 2. Number 196 of animals used in this study.
 3. Species (common name) guinea pig of animals used in this study.
 4. Explain the procedure producing pain and/or distress.

Animals are sensitized using complete Freund's adjuvant. This results in an inflammatory response with a scab at the site of injection.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The use of Pharmaceuticals to alleviate pain or distress may interfere with the compound being tested, thereby invalidating the data collected which would in turn require repeat testing and increase the number of animals utilized..

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

Notification No. 698 issued by the Director-General of the Pharmaceutical Affairs Bureau of the Japanese Ministry of Health and Welfare (MHW) on May 30, 1980 entitled "Required Data for Application for Approval to Manufacture (Import) Drugs".

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters		30			30
8. Rabbits					
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
Rats			16		16
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	68	0	68
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	96	0	96
12. Other Farm Animals	0	0	0	0	0
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits			1110		
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs		3	124		127
5. Cats			127		127
6. Guinea Pigs		12	1		13
7. Hamsters					
8. Rabbits		101	148		249
9. Non-human Primates	10	86	1267		1353
10. Sheep			113		113
11. Pigs		16	344		360
12. Other Farm Animals					
Goats		3			3
13. Other Animals					
Ferrets			226		226
Squirrels		50			50
Bats		14			14

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

55R0002

Research Triangle Institute
1999 Annual Report to USDA

Supplementary Information on Animals Assigned to Category E

1. Nine does died due to misdirected doses (dosing tubes were inadvertently inserted into the trachea instead of the esophagus).
2. Nineteen does died or were euthanized moribund in late gestation apparently due to the toxicity of the compound under test.
3. Of animals assigned to a toxicity testing study, one doe in the control group was found dead on gestational day 30; one doe in the low-dose group was found dead on gestational day 15 and one on gestational day 29; and in the mid-dose group, one doe was found dead on gestational day 29 and one on gestational day 30. No does died in the high dose group of this particular study; therefore, the deaths in these groups may not have been related to toxicity of the compound under test.

Davie Hall

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report)	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates		4	9		13
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					
Pigeons		24			24

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by the research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

55R0109

Optional Column E Explanation Form

NOV 19 1999

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 55-R-0109

2. Number 1,984 of animals used in this study.

3. Species (common name) guinea pig of animals used in this study.

4. Explain the procedure producing pain and/or distress.

- a. Diphtheria potency - To determine the anti-diphtheria potency of intramuscular and intravenous products using neutralization methodology.
- b. Tetanus potency - To quantitate the potency of Tetanus Immune Globulin (Human) by using neutralization methodology.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

This testing is mandated by Bayer Product License Testing Requirements. Administration of anesthetic, analgesic, or tranquilizer drugs could interfere with the outcome of the test.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency FDA CFR 21 CFR 640.100

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ANNUAL REPORT OF RESEARCH FACILITYAdditional Sheet

Explanation of Part E - Explanation of animals used in experiments involving pain or distress without use of an anesthetic, analgesic, or tranquilizer.

There are no validated nonanimal alternative procedures for the following animal activities. All testing procedures were reviewed by the attending veterinarian prior to their initiation.

#4 - CaninesEfficacy of Selected Compounds on Cardiac Function in a Canine Model of Heart Disease - 2 Canines

These studies are surgically induced models of heart disease. During the surgical and post-surgical phase the animals receive appropriate amounts of anesthetics and analgesics. During the phase of the study when potential new pharmaceuticals are tested, an occasional animal will manifest symptoms of cardiac distress. The use of analgesics or anesthetics at that phase of the study would interfere with evaluation of the potential new drugs for efficacy in the treatment of heart disease.

#8 - RabbitsRabbit Eye Irritation Studies - 25 Rabbits

These investigative studies are designed to look for biomarkers associated with ocular injury that will permit the development of in vitro alternatives. It is necessary that no anesthetics or analgesics be used since their use would interfere in the evaluation of test results. Most materials cause only transient irritation and mild damage to the conjunctiva and/or cornea.

#13 - FerretsRespiratory Infection Model - 74 Ferrets

This study is designed to evaluate effective drug therapies. The animals experience no pain or mortality. They do, however, show signs of distress for several days in that they develop some malaise, inappetence with slight weight loss, and elevation in body temperature. The use of analgesics would interfere with accurate evaluation of the benefits of new drug therapies.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs		382		6	388
5. Cats					
6. Guinea Pigs		4271		8	4279
7. Hamsters		135			135
8. Rabbits	2	2317		33	2350
9. Non-human Primates					
10. Sheep					
11. Pigs		32			32

Section E.8

Thirty-three rabbits experienced very brief discomfort resulting from test article administration during preclinical toxicology testing. These animals were used on acute dermal toxicity (27 rabbits), and primary eye irritation (6 rabbits) studies. These studies are required by the U.S. EPA Hazard Evaluation Guidelines and the U.S. FDA Guidelines for development of human safety data.

For the primary eye studies, the ocular tissue is not anesthetized since inhibition of the blink and/or tear response may alter the experimental results. In addition, the local anesthetic agents may interact with the test article altering the ocular response. Some local anesthetics can also cause loss of the surface cells of the cornea and delay corneal epithelial regeneration.

The dermal toxicity studies were conducted to monitor several endpoints, including clinical effects, body weight effects, lethality and reversible toxicity. Since lethality and reversible toxicity are specific endpoints in these evaluations, administration of sedatives, tranquilizers and/or analgesics could interfere with these endpoints. If no mortality is produced by administration of a specific dose level, no further testing is required under the guidelines, thus eliminating unnecessary animal testing.

Eight guinea pigs experienced distress following test article administration and were euthanized for humane reasons. Pain-relieving drugs would have interfered with the purpose of the dermal sensitization study required by the FDA Center for Drug Evaluation and Research for development of human safety data.

Six dogs experienced brief discomfort following test substance administration. The discomfort for three of the dogs was minimal and of short duration. The remaining three dogs were euthanized for humane reasons because analgesics would have interfered with the purpose and/or results of the study. The studies were required by the FDA for development of human safety data.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 31-R-0021
2. Number 22 of animals used in this study.
3. Species (common name) guinea pig of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Twenty-two guinea pigs were used to determine the relative toxicity of cholinesterase inhibiting compounds. These animals were tested either by intramuscular injection or by inhalation of a vapor or particulate material. Animals dosed in this manner were placed in the unalleviated pain or distress category.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Anesthetics, analgesics or tranquilizers could not be used for the relief of pain in the post-exposure phase due to their ability to interfere with the physiological effects of the test article. Anesthetics, analgesics and tranquilizers may act as respiratory depressants and could potentiate the toxic action of test compounds. External stimuli and manipulation were minimized to decrease any associated anxiety. The Institutional Animal Care and Use Committee approved these studies and any subsequent protocol amendments. Experienced staff veterinarians were on site to monitor study conduct and any animal welfare concerns.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	6	6	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals	0	0	0	0	0
13. Other Animals	0	0	0	0	0

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs			95		95
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	14		23		23
5. Cats	12		20		20
6. Guinea Pigs	7	7			7
7. Hamsters					
8. Rabbits	8	8			8
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 31-R-0091
2. Number 6 of animals used in this study.
3. Species (common name) Rabbit of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Acute Eye Irritation Study

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Conducted in accordance with OPPTS Series 870 Health Effects Test Guidelines

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency EPA CFR 40 CFR Ch.1 (7-1-92)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs	0	59	115	0	174
5. Cats	0	37	214	0	251
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	0	0	0
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals	0	0	0	0	0
13. Other Animals (ferret)	0	0	1 (ferret)	0	1

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
 - 2) Each principal investigator has considered alternatives to painful procedures.
 - 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- Attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	172	0	0	172

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and if has required that exceptions to these standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the date and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

84 F 0001¹

Subject: Explanation for Animals Listed in Column E.

Registration No. 84-F-0001

Deer Mice (40)

Deer mice listed in Column E of this report were used in a studies outlined by the Office of Pesticides Programs of the EPA. The animals were used as outlined in the Standard Mouse Anticoagulant Dry Bait Laboratory Test method (OPP Designation: 1.216.

Ferrets (8)

Ferrets listed in Column E of this report were fed a bait containing difethialone, an anticoagulant, and allowed to succumb to the toxin without the use of anesthetics, analgesics, or tranquilizers. Ferrets that ingested the difethialone bait were required to conduct a part of QA-385 – “Secondary toxicity hazard assessment of difethialone in black-billed magpies (*Pica pica*) and European ferrets (*Mustela putorius furo*)”. Ferrets were offered the bait in their cages and allowed to ingest the bait. The amount of bait ingested by the ferrets needed to be equal to that normally consumed by the ferrets. Therefore, it was not desirable to bait anesthetized ferrets or provide bait to ferrets under the influence of analgesics or tranquilizers. General aspects for conducting this type of secondary hazard test are described in the following document: Urban, D. J. and N. J. Cook. 1986. Ecological Risk Assessment. EPA-540/9- 85-001, U. S. Environmental Protection Agency, Office of Pesticide Programs, Washington, DC. 20460 96 p.

Pocket Gopher(5)

Five pocket gophers were fed strychnine bait and allowed to succumb to the toxin without the use of anesthetics, analgesics, or tranquilizing drugs. Pocket gophers that had ingested strychnine bait were required to conduct a part of QA-623, "Assessing potential secondary hazards of pocket gophers following strychnine baiting". The experimental approach was to provide animals access to bait in their pens and permit them to ingest the bait. The amount of bait ingested by the pocket gopher needed to be equivalent to that normally consumed by pocket gophers. Therefore, it was considered undesirable to dose an anesthetized animal or provide bait to an animal under the influence of an anesthetic.

84 F 0001

(Continuation)

Explanation for Animals Listed in Column E

Registration No. 84-F-0001

Pocket Gopher(34)

Thirty-four pocket gophers were placed in pens under semi-natural conditions and permitted to construct burrows and nest chambers. Subsequently, the animals were baited with strychnine bait placed within their burrow systems, exactly as bait is placed during operational baiting of pocket gophers to reduce populations on forest sites. The objective of this portion of the study QA-628, "Assessing potential secondary hazards of pocket gophers following strychnine baiting", was to determine the natural fate of carcasses of pocket gophers that succumbed to strychnine bait. The amount of bait and the activity of pocket gophers post ingesting bait needed to reflect normal conditions to accurately assess carcass location. Therefore it was considered undesirable to dose an anesthetized animal or provide bait to an animal under the influence of anesthetics. Three of the 31 pocket gophers used in the study did not succumb to the bait, however, all 34 animal are listed in column E because it is possible that the three did ingest some bait and were ill for a period.

Stream Beaver(3)

Three beaver ingested zinc phosphide treated apples and subsequently died. The purpose of the study, QA-611, "Preliminary evaluation of zinc phosphide bait for reducing beaver populations", was to determine whether existing label applications would be effective to lethally remove treated beaver. It was necessary to assess the response of beaver to baits and to learn if the bait ingestion would be fatal. Therefore, it was considered undesirable to dose an anesthetized animal or provide bait to an animal under the influence of anesthetics. Eight beaver were exposed to the bait, however, five of the eight rejected the bait (none was ingested). The five that rejected the bait are listed in column C, along with two animals involved in a separate study. The three animals that ingested the bait are listed in column E.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

8 November 1999

Report to Accompany APHIS Form 7023 to support Column E listing (Unrelieved Pain or Distress)

All animal protocols were developed with input from the attending veterinary staff and reviewed by the IACUC to determine that all avenues of pain/distress relief were implemented where possible. Investigators must perform literature searches for alternatives to painful procedures, and the search strategy and results must be documented in every protocol. Those studies which required unrelieved pain were statistically designed to ensure that the least number of animals needed yield significant results were exposed to unrelieved pain or distress. Those animals experiencing unrelieved pain or distress were carefully monitored and given special husbandry provisions to provide as much comfort as possible (e.g., easy access to food and water, increased bedding). Any moribund animals were humanely euthanized as soon as possible so that they did not experience prolonged suffering.

EXPLANATION OF UNRELIEVED PAIN OR DISTRESS:

Guinea Pigs -

Protocol 1 - The study of immune response to and protective efficacy of vaccine candidates directed against *shigella* requires an accurate evaluation of the immune response raised by the administration of these vaccines. The use of analgesics, particularly opiates or narcotics, result in immunosuppression, which would invalidate the results of experiments testing immune responses as well as increasing the severity of the possible eye infection, since immunized animals frequently develop either a mild infection or no infection at all. Use of analgesics that are anti-inflammatory (e.g. aspirin) would also invalidate the model since the PI is studying a model for inflammation of epithelial cells by bacterial invasion. The eyes are scored using a system of 1 to 3. In most cases animals will be euthanized as soon as it is apparent that a score of three is reached.

Protocol 2 - This is a Refinement (3Rs/alternatives) study to use with the Sereny test. To achieve the primary objective of the study (refinement through analgesics), a minimum number of control animals must be utilized. The potential immunomodulatory effects of buprenorphine, used in conjunction with the guinea pig keratoconjunctivitis model, have yet to be evaluated. If buprenorphine is found to alter the specific immunological parameters, as measured in conjunction with the Sereny test, then alternative methods for controlling pain can be considered.

Hamsters -

The purpose of the protocol is to establish an animal model of diarrhea, therefore any discomfort due to diarrhea cannot be treated pharmacologically due to risk of interference with the symptomatology associated with the infection. Any animal developing signs of diarrhea will be immediately provided supportive fluid treatment to diminish any discomfort associated with diarrhea. Any animals demonstrating stage two diarrhea for 2 days or stage three diarrhea for 1 day will also be euthanized. In addition, hamsters will undergo the distress of a 24 hour fast. This is necessary in order to get the best dose response prior to inoculation in order to induce actual diarrhea.

Rabbits -

Following oral challenge with ETEC, rabbits may experience the discomfort of diarrhea and possible dehydration. However, the pain or distress caused by this non-surgical challenge procedure is far less than that of the more traumatic RITARD procedure. Supportive treatment will be provided (e.g. fluids provided orally, subcutaneously) however, since studies are concerned with the pathophysiology of bacterial enteritis no pharmacological agent will be used to reduce the discomfort of diarrhea due to risk of interference with symptomatology associated with the infection. The use of opiate analgesics may interfere with the diarrhea response by decreasing intestinal motility while non-opiate analgesics may interfere with the prostaglandin-mediated intestinal secretory mechanisms associate with the diarrhea response. One week after challenge, animals will be euthanized.

10 F 0002

Report to Accompany APHS Form 7023 to support Column E listing (Unrelieved Pain or Distress)
WRAIR, Washington, DC 20307-5100

Pigs -

The lethal shock that is induced by the lethal SE-challenge with the LD50 test in the positive control animals will necessarily cause pain to these animals. But positive controls are required to validate results. Analgesics would impact the physiological parameters, exacerbating the lethal shock or emesis induced by the SE and compromising analysis of collected data. If the experimental drugs proved their utility, the animals should experience relief, but should they not experience relief then that indicates failure of the drug and is necessary for that reason. In all circumstances, the animals will be under constant veterinary care and will not be subject to any unnecessary pain.

Non-human Primates -

In humans, virulent *S. flexneri 2a* 3457T induces painful abdominal cramps and tenesmus accompanied by myalgia and fatigue. In general, unless the contrary is known or established, it should be assumed that procedures that cause pain in humans also cause pain in animals. Previous studies have shown that opioid down-regulation on the immune response. The potential immunomodulatory effects of buprenorphine have not been evaluated in the NHP model. A study to evaluate buprenorphine will be conducted along with the protocol. If it is not found to alter the specific immunological parameters as measured in this study, then alternatives methods for controlling pain can be deployed. Shigellosis is usually a self-limited infection in rhesus monkeys, and spontaneous recovery is expected after 48 to 72 hours of acute disease. Animals were continually evaluated by the veterinary staff. Guidelines were established to determine progression of illness. Once a certain point had been reached, supportive therapy was initiated.

Silky Pocket Mouse		12 (D) 1 (E)			13
Plains Pocket Mouse		3 (E)			3

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL (Chief Executive Officer or Legally Responsible Institutional Official) I certify that the above is true, correct, and complete (7 U.S.C. Section 2143).

To: USGS Senior Staff Biologist
Attn: Dr. David L. Trauger

From: [REDACTED] USGS-NWHC, Madison, WI

Subject: Animal Welfare Act - APHIS Annual Animal Use Report
(justification regarding procedures producing pain or distress)

During this reporting year the 345 laboratory mice and 17 domestic ferrets were utilized in procedures producing pain and distress in which the use of anesthetic, analgetic, or tranquilizing drugs would have adversely affected the procedures or the results.

Laboratory mice were utilized for the purpose of detecting botulism toxin in research and diagnostic samples. This test relies on the visible adverse reaction of the test animal to the toxin. Mice were euthanized as soon as a positive results were confirmed. The facility utilized non animal consumptive technology whenever feasible.

Black-footed ferrets are quite sensitive and susceptible to the plague bacteria. The purpose of this research is to develop a protective vaccine for black-footed ferrets being released into the "wild" or being captive reared. Hybrid ferrets were utilized to test the efficacy of an anti-plague bacteria vaccine. The end point for the experiment is the animal developing the signs and symptoms of the disease. Animals were euthanized as soon as the signs and symptoms of an infection were observed and confirmed.

Please contact me at 608-270-2420 if you require additional information for this report.

3. Reporting Facility.

Eight research facilities in the U.S. Geological Survey (USGS) Biological Resources Division (BRD) reported use of animals covered by the Animal Welfare Act under APHIS Registration No: 10-F-0008 in Fiscal Year 1999. Seven other research centers had no reportable animal use during Fiscal Year 1999. Research with animals at BRD's Cooperative Research Units affiliated with universities throughout the United States are reported through the host universities.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 95-F-0001
2. Number 13 of animals used in this study.
3. Species (common name) guinea pigs of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Starting at one to two days of age, neonatal guinea pigs are exposed to an atmosphere of 95% oxygen and 20 ppm nitric oxide for up to five days. Exposure to hyperoxia alone often produces respiratory distress after three to five days of exposure. Exposure to the combination of hyperoxia and nitric oxide may also result in respiratory distress. It should be noted that an early endpoint is used in this study: the guinea pigs are euthanized as soon as they progress beyond mild respiratory distress to develop cyanosis, lethargy, pallor, or abnormal resting posture.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The development of lung injury was a parameter being studied. Relief of any respiratory distress would have required anesthesia and intubation, both of which would have confounded the natural course of the pulmonary effects of hyperoxia and the potential mediating effects of nitric oxide. Furthermore, intubation and mechanical ventilation would potentially introduce barotrauma as a confounding source of lung injury. Literature searches failed to reveal an alternative to the use of animals to measure the whole animal physiological functions of interest.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	6		77		77
5. Cats	0		20		20
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					
Rats	15		157		157

ASSURANCE STATEMENTS

- 1). Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2). Each principal investigator has considered alternatives to painful procedures.
- 3). This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: _____

2. Number 22 _____ of animals used in this study.

3. Species (common name) guinea pig _____ of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Twenty-two guinea pigs were used to determine the relative toxicity of cholinesterase inhibiting compounds. These animals were tested either by intramuscular injection or by inhalation of a vapor or particulate material. Animals dosed in this manner were placed in the unalleviated pain or distress category.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Anesthetics, analgesics or tranquilizers could not be used for the relief of pain in the post-exposure phase due to their ability to interfere with the physiological effects of the test article. Anesthetics, analgesics and tranquilizers may act as respiratory depressants and could potentiate the toxic action of test compounds. External stimuli and manipulation were minimized to decrease any associated anxiety. The Institutional Animal Care and Use Committee approved these studies and any subsequent protocol amendments. Experienced staff veterinarians were on site to monitor study conduct and any animal welfare concerns.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs	0	0	0	0	0
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	1,827	488	60	2,375
7. Hamsters	0	0	0	0	0
8. Rabbits	0	0	44	0	44
9. Non-human Primates	0	36	48	0	84
10. Sheep	0	0	0	0	0
11. Pigs	0	47	32	0	79
12. Other Farm Animals	0	0	0	0	0
13. Other Animals

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTER RESEARCH FACILITY OFFICIAL
(Chief Executive Officer or Legally Responsible Institutional Official)

I certify that the above is true, correct, and complete (7 USC Section 2143)

	(b)(6) (b)(7)(C)	27 Oct 99

51 F 0006

10/27/99

Protocol 1

1. A total of 45 column "E" guinea pigs were utilized in this study.

2. Painful procedure: Guinea pigs receive a convulsive dose of nerve agent which is thought (but not documented) to cause some pain and/or distress due to the intense physical activity caused by the seizure. There is a potential for the pain and/or distress to be relieved to some extent by the administration of one of the test drugs that successfully terminates the seizure.

3. Justification: Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest (Marshall and Wollman, 1985), the synthesis and release of brain neurotransmitters (Beleslin and Polak, 1965; Ngai *et al.*, 1978; Hanin, 1978), and/or the toxicity of the nerve agent (Clement, 1984) and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive.

4. No federal regulations mandate this procedure.

Protocol 2

1. A total of 9 column "E" guinea pigs were utilized in this study.
2. Painful procedure: The guinea pigs receive a dose of soman which results in seizure activity. Seizure activity may or may not be associated with motor convulsions, and if present, these convulsions will most likely bring about some degree of pain or discomfort. However, it has been suggested that animals are unresponsive during seizure activity and may not be aware of pain or distress. Thus, the worst case scenario is assumed.
3. Justification: To meet the objectives of this project, in terms of relevance to actual field conditions, it is critical that anticonvulsant drugs be evaluated in a model in which seizure activity is ongoing. The presence of anesthetics or analgesics will confound the data making it impossible to distinguish analgesic/anesthetic-induced perturbation from real differences. Thus, the administration of anesthetics or analgesics for this particular study will be counterproductive to the overall goals of the project.
4. No federal regulations mandate this procedure.

51 F 0006

10/27/99

Protocol 3

1. A total of 6 column "E" guinea pigs were utilized in this study.

2. Painful procedure: Guinea pigs will receive a convulsive dose of the nerve agent soman, which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.

3. Justification: The use of anesthetics and/or analgesics would result in misleading information regarding the role of mast cell mediated anaphylactoid reactions/mast cell degranulation in acute organophosphorous poisoning. Anesthetics/analgesics also have profound effects on brain function that can interact with the toxicity of the nerve agent and thus complicate interpretation of the results.

4. No federal regulations mandate this procedure.

51F0006

12/21/99

1. A total of 231 column "E" guinea pigs were utilized in this study.

2. Painful procedure: Both species receive a convulsive dose of nerve agent which is thought (but not documented) to cause some pain and/or distress due to the intense physical activity caused by the seizure. There is a potential for the pain and/or distress to be relieved to some extent by the administration of one of the test drugs that successfully terminates the seizure.

3. Justification: Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest (Marshall and Wollman, 1985), the synthesis and release of brain neurotransmitters (Beleslin and Polak, 1965; Ngai *et al.*, 1978; Hanin, 1978), and/or the toxicity of the nerve agent (Clement, 1984) and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive.

4. No federal regulations mandate this procedure.

DEC 21 1999

51 F0006

12/21/99

1. A total of 18 column "E" guinea pigs were utilized in this study.

2. Painful procedure: The guinea pigs receive a dose of soman which results in seizure activity. Seizure activity may or may not be associated with motor convulsions, and if present, these convulsions will most likely bring about some degree of pain or discomfort. However, it has been suggested that animals are unresponsive during seizure activity and may not be aware of pain or distress. Thus, the worst-case scenario is assumed.

3. Justification: To meet the objectives of this project, in terms of relevance to actual field conditions, it is critical that anticonvulsant drugs be evaluated in a model in which seizure activity is ongoing. The presence of anesthetics or analgesics will confound the data making it impossible to distinguish analgesic/anesthetic-induced perturbation from real differences. Thus, the administration of anesthetics or analgesics for this particular study will be counterproductive to the overall goals of the project.

4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 3

1. A total of 18 column "E" guinea pigs were utilized in this study.

2. Painful procedure: Guinea pigs will receive a convulsive dose of the nerve agent soman, which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.

3. Justification: The use of anesthetics and/or analgesics would result in misleading information regarding the role of mast cell mediated anaphylactoid reactions/mast cell degranulation in acute organophosphorous poisoning. Anesthetics/analgesics also have profound effects on brain function that can interact with the toxicity of the nerve agent and thus complicate interpretation of the results.

4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 4

1. A total of 337 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs receive a potentially convulsive dose of the nerve agents to be evaluated, and death from nerve agent intoxication is the primary endpoint of this protocol.
3. Justification: Death from nerve agent exposure is aesthetically unpleasant and probably painful to the animals due to the intense physical activity caused by the seizures. However, quantitative evaluation of nerve toxicity and the efficacy of therapeutic countermeasures requires exposure to anesthetics or analgesics to relieve pain would lead to an erroneous evaluation of the toxicity of these agents and the efficacy of pretreatment, treatment, and decontamination procedures.
4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 5

1. A total of 328 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs receive a convulsive dose of the nerve agent soman which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.
3. Justification: The pain may be relieved to some extent by administration of one of the test drugs that successfully terminates the seizure. Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest and/or the toxicity of the nerve agent and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive. Since the goal of the study is to evaluate the ability of novel anticonvulsant drugs to treat nerve agent-induced seizures, subjecting the animals to nerve agent intoxication that elicits seizures is essential.
4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 6

1. A total of 24 column "E" non-human primates were utilized in this study.
2. Painful procedure: All monkeys receive a convulsive dose of the nerve agent soman, which is thought to cause some pain and/or distress due to the intense physical activity caused by the seizure.
3. Justification: The pain may be relieved to some extent by administration of one of the test drugs that successfully terminates the seizure. Anesthetics and analgesics are known to have profound effects on brain function that can interact with the drugs of interest and/or the toxicity of the nerve agent and thus complicate interpretation of the results. This is especially so since the purpose of the study is to model the pharmacological intervention a human nerve agent casualty would receive. Since the goal of the study is to evaluate the ability of novel anticonvulsant drugs to treat nerve agent-induced seizures, subjecting the animals to nerve agent intoxication that elicits seizures is essential.
4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 7

1. A total of 12 column "E" non-human primates were utilized in this study.
2. Painful procedure: Non-human primates may experience pain or distress due to exposure to cyanide.
3. Justification: Untreated cyanide administration induces rapid unconsciousness and death. Several authors have argued that this is painless and does not induce stress, and may actually produce analgesia (Tadic, 1992), while others have suggested that it does induce pain or distress (Potter, 1950). Recovery from cyanide intoxication may induce stress. The investigators believe that pretreatment with WR242,511 will prevent death. The efficacy of WR242,511 cannot be determined unless these animals are challenged with a potentially fatal dose of cyanide. However, it is not certain that these animals will not experience pain or distress as a result of the non-fatal cyanide exposure. The investigators have no other choice but to expect that cyanide administration may be painful/distressful.
4. No federal regulations mandate this procedure.

DEC 21 1999

51F0006

12/21/99

Protocol 8

1. A total of 822 column "E" guinea pigs were utilized in this study.
2. Painful procedure: Guinea pigs are exposed to various organophosphorus (OP) compounds.
3. Justification: Anesthetics and analgesics cannot be used in any of the procedures involving OP administration and/or pretreatment and treatment with any of the medical countermeasures. These procedures require exposure to near lethal and lethal doses of OP compounds in live unanesthetized animals. One of the principal effects of OP intoxication is respiration paralysis. This is also a major side effect of anesthetics and analgesics. Conducting these experiments under anesthesia or analgesia could lead to faulty interpretation of the toxicity data and/or the effectiveness of the countermeasures because of the synergistic respiratory depressant effects of these drugs with OPs.
4. No federal regulations mandate this procedure.

Justification

Chickens, turkeys and bobwhite quail were used in studies on the pathophysiology and immunology of coccidiosis. The experimental design of these studies required that the natural course of the disease be allowed to progress; on occasion, this resulted in animals exhibiting signs of the disease for a period of one to three days. All infected animals were killed as soon as the experimental protocol allowed.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

8. Rabbits	0	0	8	0	8
9. Non-human Primates	0	0	11	0	11
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 51-F-0016
2. Number 8 of animals used in this study.
3. Species (common name) Dog of animals used in this study.
4. Explain the procedure producing pain and/or distress.

A canine model was developed to investigate the pathophysiology of and therapies of septic shock. This model is the only one which simulates the human cardiovascular abnormalities of sepsis, in which standard therapies are beneficial, and has been validated to predict outcome with novel therapies of sepsis. A live bacterial intraperitoneal infection was surgically introduced. This reliably produces sepsis and the animals become sick, weak, depressed, and 30-50% will succumb to infection. In an attempt to improve pain control, a trial blockade of afferent pain fibers originating from the visceral sympathetic nervous, a celiac plexus block, was performed. This study is listed in Column E because of the distress and discomfort associated with the systemic infection during the initial 48 hours and longer after the onset of infection.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Septic shock is the leading cause of death in medical intensive care units, and the incidence of septicemia has more than doubled in the last decade. Human septic shock has had a persistently high mortality rate despite conventional therapies; therefore, new therapies are desperately needed. Although narcotics and sedatives would potentially relieve suffering, these drugs also cause respiratory depression and worsen hypotension that could further compromise the animal's health and therefore are contraindicated for the treatment of septic shock. Furthermore, the use of narcotics and sedatives would effect survival and confound the analysis of results. Nevertheless, our protocol specifies that if at any time in the study the supervising veterinarian or principal investigator determines that an animal is enduring excessive pain and distress, we would euthanize the animal.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NO OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep			24		24

USAMRIID

23 NOV 99

(b)(6) (b)(7)(C)

51F0021

Optional Column E Explanation Form

1. Registration Number: 51-F-021
2. Number 97 of animals used in this study.
3. Species (common name) Guinea Pigs of animals used in this study.
4. Explain the procedure producing pain and/or distress.

The mission of the United States Army Institute of Infectious Diseases is to perform studies on the pathogenesis, diagnosis, prophylaxis, treatment and epidemiology of infectious diseases for medical defense against potential biological threat agents and naturally occurring infectious agents and toxins of military importance that require special containment. The animals listed in column E have all been used in some aspect of these studies. The rationale and justification for the use of animals in each of the studies performed in support of the institute's mission have been closely scrutinized by the IACUC and the Institute's leadership. The nature of most infectious diseases and toxins studied at USAMRIID involves a clinical course which includes some degree of discomfort (e.g. fever, myalgia, etc).

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The retardation or relief of clinical signs with pain relieving or anesthetic drugs result in inaccurate experimental data because these drugs interfere with certain clinical and immunological responses to biological agents by the test animal, and subsequent analysis of those responses. All studies that result in unalleviated pain or distress to experimental animals require scientific justification, in writing, explaining in detail, why the use of pain relieving drugs is not appropriate and how it would interfere with the scientific goals of the study. Each of these protocols is evaluated on a case by case basis by the IACUC.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102)

Agency N/A CFR N/A

51 F 0021

51 F0021

SUMMARY OF IACUC APPROVED EXCEPTIONS:

<u>Brief Description of Exception</u>	<u>Species of Animal</u>	<u>Number of Animal</u>
Deviation of sanitization procedures as outlined in the AWA. Animals are in a BL3 and BL4 biocontainment area that does not allow routine cage sanitizing in the cagewash facility at the required two week interval due to safety concerns and logistical constraints. Cages are sanitized in place until it is no longer possible to adequately clean them by hand at which time they are replaced with mechanically sanitized cages.	Nonhuman Primate	43
	Rabbits	12

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Laboratory Animal Project Review (LAPR) explanations for Column E entries.

LAPR# 98-01-002, "Exposure of Guinea Pigs To Oxidants". Anesthetics, analgesics or tranquilizers could change the breathing patterns of the animals, which would compromise the "Nose Only exposure inhalation studies. Instead, animals will be acclimated by placing them in the exposure tubes for 30-60 minutes on the previous day to familiarize them with the tubes. The IACUC has observed and approved these procedures. Sixty six (66) animals have been used thus far.

Addendum to APHIS FORM 7023 Concerning Category E Animals

For the 1997-1998 reporting period, 148 rats were used in experiments where the use of drugs could not be used to relieve pain or distress. These animals were all used in IACUC-approved nutrition experiments involving the trace element boron and its influence on the inflammatory response in bone joints. The purpose of the experiments was to study the relationship between boron, joint inflammation and the development of arthritis. The attached memo from Dr. Hunt explains that the use of analgesic, anesthetic, or tranquilizing drugs could mask the effects of dietary boron on the inflammatory response and interfere with the expression of arthritis. Dr. Hunt also was concerned that the use of drugs could impair the animals' ability to walk and interfere with normal eating and grooming habits.

SUBJECT: Justification for Lack of Anesthesia to Reduce Pain

TO:

[REDACTED]

FROM:

[REDACTED]

(b)(7)(C)
(b)(7)(C)

The rat represents a standard animal model for immune system function, for example, antibody production. The model develops antibodies to presented antigens very quickly so that the immune response can be followed over a period of 2-3 weeks. Mycobacterium butyricum is a well-characterized model antigen that mimics rheumatoid arthritis. There is strong indirect evidence that boron has a role in the prevention of rheumatoid arthritis which may be an autoimmune disease.

The importance of finding the cause of devastating human metabolic bone diseases such as rheumatoid arthritis is self evident. Because of the direct or strong indirect evidence that boron affects bone structure or the inflammatory response in bone joints, it is appropriate to characterize the complex interrelation between boron and the immune response in rats. Analgesic, anesthetic, or tranquilizing drugs were not used to minimize pain or distress because use of such agents would interfere with proper expression of the rheumatoid arthritis model or interfere with the ability of the animal to groom, walk, or obtain food and water.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs			0		0
5. Cats					
6. Guinea Pigs		0			0
7. Hamsters

11. Pigs		0			0
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Animals used in actual research or experimentation involving pain or distress without the use of drugs:

1. A total of one hundred eighteen (118) nonhuman primates, including those animals having multi-year assignments, were trained and their performance maintained by standard operant techniques using negative reinforcement. The use of drugs would have interfered with performance training/maintenance and the identification of any decrement in performance resulting from experimental conditions.
2. A total of thirty (30) pigs, including those animals having multi-year assignments, were trained and their performance maintained by standard operant techniques using negative reinforcement. The use of drugs would have interfered with performance training/maintenance and the identification of any decrement in performance resulting from experimental conditions.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs		55			55
7. Hamsters					
8. Rabbits					
9. Non-human Primates					
10. Sheep	0		Statement: Farm animals used at this facility		
11. Pigs			are involved in studies to increase		
12. Other Farm Animals	0		animal production.		
13. Other Animals					

ASSURANCE STATEMENTS

- 1). Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2). Each principal investigator has considered alternatives to painful procedures.
- 3). This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

E. Explanation of Procedures

Guinea Pigs, Mice

Fungal agents are administered IC into guinea pigs. Infected animals develop systemic infection. The clinical presentations are anorexia, lethargy, and finally death. Additional medications would interfere with evaluation of the efficacy of the drugs being studied.

Mice

The lifetime studies mice are allowed to die naturally without intervention to obtain valid statistical data on life spans.

Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2). Each principal investigator has considered alternatives to painful procedures.
- 3). This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	22	0	27	0	27
5. Cats	0	0	0	0	0
6. Guinea Pigs	0	0	0	0	0
7. Hamsters	0	0	0	0	0
8. Rabbits	5	3	257	0	260
9. Non-human Primates	0	0	0	0	0
10. Sheep	18	0	38	0	38
11. Pigs	2	0	17	0	17
12. Other Farm Animals					
13. Other Animals					
Mice	1630	401	425	0	826
Rats	25	1008	875	0	1883
Frogs	0	0	8	0	8

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report, in addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

BAYER ANIMAL HEALTH Registration No. 48-R-0005

The hamsters used are in accordance with 9 CFR 113.101, 113.102, 113.103 and 113.104 to release USDA licensed product containing leptospira organisms. The hamsters listed in the pain not relieved by anesthesia category were either used for passage of the challenge culture or as negative control animals which were challenged with viable organisms.

The rabbits used are in accordance with 9 CFR 113.109 to release USDA licensed product containing clostridal organisms.

The guinea pigs used are in accordance with 9 CFR 113.106 and 113.107 to release USDA licensed product containing clostridial organisms. The guinea pigs listed in the pain not relieved by anesthesia were used as controls which were not vaccinated but were challenges with viable organisms. Guinea pigs were also used in accordance with 9 CFR 113.451 to release USDA licensed product containing tetanus antitoxin.

The canines used in accordance with 9 CFR 113.202 and 113.204 to release USDA licensed product. The canines listed in the pain not relieved by anesthesia category were used in the qualification of a reference vaccine.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 41-R-0005
2. Number 370 of animals used in this study.
3. Species (common name) rabbit of animals used in this study.
4. Explain the procedure producing pain and/or distress.

This laboratory studies staphylococcal, streptococcal, and enterococcal factors that lead to production of toxic shock syndromes or endocarditis. Toxic shock syndromes by definition require hypotension/shock to be present for diagnosis, and thus, for our studies, we must allow progression to at least that point. The end point is failure of rabbits to exhibit escape behavior combined with inability to right themselves. This is particularly important to assess the protective ability of toxoid vaccines we have developed. At that time the animals are euthanized.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

There have been many published studies indicating pain relieving medications are in fact risk factors for development of toxic shock syndromes. Although the exact mechanism underlying the increased risk is unclear, there is evidence to suggest that the toxins have significant effects on the host nervous system, and thus may synergize with pain relieving medications. It is for this reason that we do not administer such medications in certain experiments.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Attachment A for APHIS form 7023

1.0 Column E, Line 4, Animal – Dogs

1.1 Forty dogs were used in studies for development of a preventative vaccine for a dog disease endemic in the United States. The development studies for this vaccine require challenge of dogs with this virulent agent in order to evaluate the vaccines efficacy and potency. This testing is required by the USDA for licensing of this product as stated in 9 CFR 113.209. Thirty-five dogs experienced neurological symptoms and/or death. Anesthetics, analgesics, and tranquilizing drugs are not appropriate treatment for this agent and would interfere with the evaluation of this vaccine.

1.2 Seventy-two dogs were used in studies for development of a preventative vaccine for a dog disease endemic in the United States. The development studies for this vaccine require challenge of dogs with this virulent agent in order to evaluate the vaccines efficacy and potency. This testing is required by the USDA for licensing of this product as stated in 9 CFR 113.317. Fifty-five dogs experienced neurological symptoms and/or death. Anesthetics, analgesics, and tranquilizing drugs are not appropriate treatment for this agent and would interfere with the evaluation of this vaccine.

2.0 Column E, Line 7, Animal – Hamsters

2.1 Seven thousand six hundred forty-five hamsters were used in testing bacterin prior to release for sale as required by 9 CFR 113.101 – 113.105. This testing requires challenging hamsters with the virulent agent in order to evaluate bacterin efficacy and potency. Two thousand two hundred ninety-four hamsters experienced weight loss, debilitation and/or death. Anesthetics, analgesics and tranquilizing drugs are not appropriate treatment for this agent and would interfere with the evaluation of this bacterin.

3.0 Column E, Line 13B, Animal – Ferrets

3.1 One hundred twenty-five ferrets were used in studies for development of a preventative vaccine for a ferret disease endemic in the United States. The development studies for this vaccine require challenge of ferrets with this virulent agent in order to evaluate the vaccines efficacy and potency. This testing is required by the USDA for licensing of this product as stated in 9 CFR 113.306. 86 ferrets experienced neurological symptoms and/or death. Anesthetics, analgesics, and tranquilizing drugs are not appropriate treatment for this agent and would interfere with the evaluation of this vaccine.

Wild birds		262	308		570

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 58-R-0007
2. Number of animals used in this study. 40
3. Species (common name) Watanabe Rabbits of animals used in this study.
4. Explain the procedure producing pain and/or distress.

The effect of stress on the development of atherosclerosis in a model prone to this disease is being studied. Male rabbits are placed together in the same cage for up to a week to evoke a stressful situation as a result of threat posturing and other aggressive behaviors.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The Stress is the trigger which induces physiologic changes in the animal that is expected to alter the disease process. Relief of stress in this instance would negatively influence the outcome of the study.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102): *none.*

Agency _____ CFR _____

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. **Registration Number:** 58-R-0007
2. **Number of animals used in this study.** 4
3. **Species (common name)** Rabbits **of animals used in this study.**
4. **Explain the procedure producing pain and/or distress.**

The PI is studying the mechanism by which sound damages the hair cells in the cochlea of the ear. The Rabbit is an established model for this type of work. Animals are exposed to 105-db noise for 4 hr periods/day for several days. The noise is about the same as being near a "lawn mower" and produces irreparable damage to hair cells.

5. **Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)**

Animals are not given sedatives or analgesics as it is thought that these agents will interfere and/or protect the cells from acoustic injury. PI states that animals exposed to such noise show no outward signs of distress during the exposure period.

6. **What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):** *None.*

Summary of exception to the regulation or standards:

None

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: **55-R-0005**
2. Number _____99_____ of animals used in this study
3. Species (common name) _____Rabbit_____ of animals used in this study
4. Explain the procedure producing pain and/or distress.

Under proparacaine-induced topical anesthesia, one eye of rabbits is intravitreally injected with a test reagent (LPS; 10ng in 10-50 μ l) approximately 3 mm posterior to the limbus, an area containing very few nerve endings. Injections are made with a 30-gauge needle attached to a glass Hamilton syringe. In some cases, at the time an experimental agent may be instilled or intravitreally injected (total volume of 50 μ l). Animals are monitored for evidence of inflammation at various time intervals with a slit lamp (scores based on iridal hyperemia and aqueous flare) to determine the appropriate time for termination (up to 48 hours). Animals are terminated by exposure to a saturated CO₂ atmosphere, eyes removed, ocular fluids aspirated, and tissues processed for histologic/molecular analyses.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

The use of opioid analgesics might alter the course of inflammation that we are studying. The use of additional animals to evaluate these substances would need to be included as controls. Investigators in the literature utilizing this same animal model do not use opioid analgesics in their studies. The use of anti-inflammatory drugs such as corticosteroids and nonsteroidal drugs would negate our studies, since the purpose of our research is to study the inflammatory response in the eye. Also, the dose of endotoxin that we inject (10 ng) is low compared to most reports in the literature (10-100mg), and induces a moderate inflammatory response. The animals continue to eat and do not become photophobic.

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ N/A _____ CFR _____ N/A _____

Optional Column E Explanation Form

55R0005

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 55-R-0005
2. Number 4 of animals used in this study
3. Species (common name) Pigs of animals used in this study
4. Explain the procedure producing pain and/or distress.

4 pigs were experimentally infected with either Salmonella typhi or Salmonella choleraesuis. Those infected with S. choleraesuis (3) developed signs of salmonellosis. Those infected with S. typhi showed no signs of distress.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

Experimental infections were employed to better understand a disease process in a normal animal. This included signs of infection and disease. Consequently we could not alleviate pain or distress without jeopardizing understanding. Also, the action of some analgesics would alter the normal course of the actual infection. By examining relatively few animals for signs of infection, we were able to draw very confident conclusions as to the sustainability of pigs for modeling disease caused by S. typhi.

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency N/A CFR N/A

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: **55-R-0005**
2. Number 79 of animals used in this study
3. Species (common name) Pigs of animals used in this study
4. Explain the procedure producing pain and/or distress.

Piglets were infected in utero with the common viral swine pathogen: Porcine Reproductive Respiratory Syndrome Virus. These piglets were all born infected with the virus as confirmed by virus isolation upon their serum. Their dams were infected by spraying a virus solution into their noses, the piglets were naturally infected during their mother's viremia.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

This study was performed to determine the effects of in utero infection by PRRSV on piglets immune cell populations and their function. Administration of analgesics would directly alter potentially important immune responses in the study pigs via anti-prostaglandin mechanisms, etc. Any piglets which were off feed for greater than 12 hours were euthanized. They were given antibiotics as clinically needed to combat secondary bacterial infections.

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency N/A CFR N/A

Optional Column E Explanation Form

55R0005

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 55-R-0005
2. Number _____ 96 _____ of animals used in this study
3. Species (common name) _____ Pigs _____ of animals used in this study
4. Explain the procedure producing pain and/or distress.

Pigs were infected at 6 days of age with 10^7 rotavirus particles by oral gavage.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

Induced infective diarrhea will cause distress to infected piglets; the main objective of this study is to treat, eliminate or alleviate diarrheal stress. We do not use analgesia because this is not typical treatment for neonatal diarrhea which we are attempting to mimic, and we do not wish to risk interfering with gut motility and enterocyte metabolism which can occur with certain drugs. Hopefully, the oral rehydration solution and other nutritional agents will reduce the length of the stress period. Furthermore, our viral dose has been titrated to a level resulting in minimal mortality.

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ N/A _____ CFR _____ N/A _____

Optional Column E Explanation Form

55R0005

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: **55-R-0005**
2. Number 2 of animals used in this study
3. Species (common name) Dogs of animals used in this study
4. Explain the procedure producing pain and/or distress.

Infection with Babesia canis and Babesia gibsoni

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

Animals used to provide infected blood for preparation of antigens used to diagnose infection in other dogs. Dogs were euthanized prior to developing severe clinical signs.

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency N/A CFR N/A

Optional Column E Explanation Form

55R0005

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Name, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 55-R-0005
2. Number _____ 20 _____ of animals used in this study
3. Species (common name) _____ Bovine –neonatal calves _____ of animals used in this study
4. Explain the procedure producing pain and/or distress.

Neonatal calves are orally inoculated with 10 oocysts of Cryptosporidium parvum in order to produce a mild diarrhea to study specific treatments to enhance repair of the intestinal damage done by this organism.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results (For Federally mandated testing, see question 6 below)

C. parvum is the most common cause of diarrhea in the neonatal bovine worldwide and is a major cause of mortality in young calves. In order to evaluate the affects of our treatments in reducing diarrhea and the damage to ileal tissue, no therapeutic agents should be given to the animal to alleviate pain, which if present, is minimal. This would obscure the purpose of this study by altering the disease state significantly and may in fact increase the severity of the disease..

6. What, if any, Federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Fifty guinea pigs were used in studies to evaluate the effectiveness of potential antibacterial agents against an experimental lung infection caused by Legionella pneumophila. Guinea pigs are susceptible to lung infection with L. pneumophila and have been used for evaluation of antibacterial agents as well as for epidemiological studies on L. pneumophila. The experimental infection in guinea pigs closely resembles the infection seen in humans and is reproducible. Analgesics could not be administered since they possess properties, which would hinder the natural infection and inflammatory processes necessary to thoroughly evaluate the novel antibacterial agents. Animals that exhibited difficulty in breathing, weight loss, anorexia, and/or an unthrifty appearance were euthanatized immediately.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

Wayne State University, Registration No. 34-R-0014

Fifty One Guinea Pigs Reported Under Reporting Code E:

Guinea pigs are utilized to evaluate the efficacy and toxicity of new investigational antifungal agents for the treatment of pulmonary aspergillosis. The advent of sophisticated life saving medical procedures, such as organ transplantation, intensive cytotoxic chemotherapy against cancer, and the prevalence of HIV infection in recent years have dramatically altered the immune status of the patient population during the past ten years. Consequently, the incidence of Aspergillus infection has increased significantly among cancer patients, organ transplant recipients and AIDS patients. Although fungal infection due to A. fumigatus has emerged as a serious clinical problem in immunocompromised patients, the choice of antifungal agents highly effective against A. fumigatus is unfortunately very limited. In this guinea pig model, a variety of novel antifungal agents are evaluated in the treatment of pulmonary aspergillosis. Clinical symptoms of this infection are treated with antifungal agents (except in control animals) and both dietary and fluid supplementation. Animals which do not respond to treatment (and control animals) are euthanized at the onset of anorexia, fever, dyspnea, or body weight loss greater than 20%.

31R0089

USDA ANNUAL REPORT-

REPORTING PERIOD: OCTOBER 1, 1998 THRU SEPTEMBER 30, 1999

FACILITY REGISTRATION NUMBER: 31-R-0089

Category E.- Dogs/Rabbits:

Pain and/or distress for which no anesthetic, analgesic or tranquilizing drug(s) were used:

The use of analgesics or nonsteroidal anti-inflammatory agents are neither scientifically acceptable nor is their use acceptable to the governing agencies involved.

One of 22 dogs on a dose range-finding study is believed to have experienced pain and/or distress. The purpose of the study was to evaluate the lethality and short term toxicity of the test articles and to establish dosages on a longer-term subchronic study. The study was conducted in compliance with the U.S. FDA (Food and Drug Administration) Good Laboratory Practice Regulations, 21 CFR Part 58. The clinical observations for this dog were intermittent and continual monitoring was therefore necessary.

One of 72 rabbits in a dose range-finding developmental toxicity study is believed to have experienced distress. The purpose of the study was to determine dose levels for a definitive developmental toxicity study. The study was conducted in accordance with the U.S. EPA Good Laboratory Practice Regulations, 40 CFR Parts 160 and 792. The onset of this animal's clinical signs was very sudden.

Two of 110 rabbits in a prenatal developmental toxicity study are believed to have experienced pain and/or distress. The purpose of the study was to determine the potential of the test article to induce development toxicity after maternal exposure during the critical period of organogenesis, to characterize maternal toxicity at the exposure levels tested and to determine a NOEL for maternal toxicity and development toxicity. The study was conducted in accordance with the United States Environmental Protection Agency (EPA) Health Effects Test Guidelines OPPTS 870.3700, Prenatal Developmental Toxicity Study, August 1998. The clinical observations of these two animals were intermittent and continued observation was necessary to elucidate a potential pattern of symptoms.

One of 108 rabbits in a study on embryo/fetal development is believed to have experienced pain and/or distress. The purpose of the study was to determine the potential of the test article to induce development toxicity after maternal exposure during the critical period of organogenesis, to characterize maternal toxicity at the exposure levels tested and to determine a NOEL for maternal toxicity and development toxicity. The study was conducted in accordance with the International Conference on Harmonization (ICH) Tripartite Guideline on Detection of Toxicity to Reproduction for Medicinal Products, Federal Register, September 22, 1999, Section 4.1.3. The study was also conducted in accordance with the U.S. FDA Good Laboratory Practice Standards (21 CFR Part 58). The onset of the clinical observations was sudden.

Two of 45 rabbits in a dose range-finding developmental study were believed to have experienced pain and/or distress. The onset of this animals' clinical signs was very sudden and timely intervention could not be accomplished. The purpose of the study was to determine dose levels for a definitive developmental toxicity study. The study was conducted in accordance with the U.S. EPA Good Laboratory Practice Regulations, 40 CFR Parts 160 and 792.

31R0089

USDA ANNUAL REPORT-**REPORTING PERIOD: OCTOBER 1, 1998 THRU SEPTEMBER 30, 1999****FACILITY REGISTRATION NUMBER: 31-R-0089****Category E.- Dogs/Rabbits (continued):****Pain and/or distress for which no anesthetic, analgesic or tranquilizing drug(s) were used:**

Two of 44 rabbits in a tolerability and toxicokinetic study were believed to have experienced pain and/or distress. The purpose of the study was to assess the toxicity following repeated dosing in order to determine dose levels for a dose range-finding embryo/fetal development study. The study was conducted in accordance with the U.S. EPA Good Laboratory Practice Regulations, 40 CFR Parts 160 and 792.

One of 170 rabbits in a prenatal developmental toxicity study was believed to have experienced pain and/or distress. The purpose of the study was to determine the potential of the test article to induce development toxicity after maternal exposure during the critical period of organogenesis, to characterize maternal toxicity at the exposure levels tested and to determine a NOEL for maternal toxicity and development toxicity. The study was conducted in accordance with The EPA Federal Insecticide, Fungicide and Rodenticide Act (FIFRA) Pesticide Assessment Guidelines (Subdivision F; series 83-3), the EPA Toxic Substances Control Act (TSCA) Health Effects Test Guidelines, 40 CFR 798.4900, the OECD (Organization for Economic Cooperation and Development) Guidelines for Testing of Chemicals, Health Effects Test Guidelines, Section 414, adopted May 12, 1981, the EPA Health Effects Test Guidelines OPPTS 870.3700, Prenatal Developmental Toxicity Study, August 1998, and the Japanese Agricultural Chemicals Laws and Regulations Testing Guidelines for Toxicology Studies (59 NohSan No. 4200) published by the Society of Agricultural Chemical Industry, issued January 28, 1985, under the auspices of MAFF (Ministry of Agriculture, Forestry and Fisheries). The study was also conducted in compliance with the U.S. EPA, 40 CFR Part 160, the OECD, [C(97) 186/Final], and the Japanese MAFF Good Laboratory Practice Regulations, 59 NohSan No. 3850, August 10, 1984.

REPORTABLE EXCEPTIONS TO ANIMAL WELFARE ACT-

The Attending Veterinarian exempted one male dog on a subchronic toxicity study for one day's exercise period (10/28/98) due to its favoring of the right hindlimb. The Veterinarian rechecked the animal after this exempted day and from then on was returned to the normal exercise and socialization regimen for this study.

The 38 dogs on a chronic toxicity study were exempted from exercise and socialization during the week of December 14, 1998 due the collection of clinical pathology and ECG parameters on December 14, 1998 and subsequent study termination on December 15 & December 16, 1998.

One male dog on a subchronic toxicity study was exempted, by the Attending Veterinarian, from group exercise and socialization for one week due to left rear limb lameness. This dog was afforded individual exercise periods for 15 minutes to one ½ hour on the regular exercise schedule. This dog was rechecked by the Attending Veterinarian and cleared for group exercise and socialization on December 29, 1999.

On January 3, 1999 the animals (48/28/44) on three studies (2 chronic and 1 subchronic studies) for the same client were exempted from exercise and socialization period due to inclement weather which caused a shortage of personnel to perform these duties. It was opted that due to the personnel shortage it was important to provide the animal care

31R0089

USDA ANNUAL REPORT-**REPORTING PERIOD: OCTOBER 1, 1998 THRU SEPTEMBER 30, 1999****FACILITY REGISTRATION NUMBER: 31-R-0089****REPORTABLE EXCEPTIONS TO ANIMAL WELFARE ACT (continued)-**

(feeding, cage cleaning, etc.). These three studies were on the same exercise and socialization regimen for a period of approximately 30 minutes seven days per week.

The Attending Veterinarian exempted one male dog on a subchronic toxicity study from exercise on March 4, 1999 due to an ocular discharge. The animal, upon re-examination by the Veterinarian after March 4, 1999, was allowed to return to the normal exercise/socialization regimen for this study.

The Attending Veterinarian exempted one male dog on a chronic toxicity study for one day's exercise period (2/7/99) due to a swollen right hind paw. The Veterinarian rechecked the animal after this exempted day and was then returned to the normal exercise and socialization regiment for this study.

The 36 dogs on a one-week reproductive toxicology study were exempted from exercise/socialization for three days after blood collection after pre-study blood parameters were collected. The purpose of this study was to investigate the reproductive system toxicology when given to mature beagle dogs for up to one week. The study was conducted in compliance with the U.S. FDA Good Laboratory Practice Standards, 21 CFR Part 58, with the exception of the hormone analyses and the histological processing of the hypothalami and pituitary glands.

Eight male and eight female beagle dogs were used in a FDA-regulated 14-Day Inhalation Range-Finding Study. The purpose of the study was to evaluate the possible toxic effects of the test article when administered via nose-only inhalation to dogs for 14 days and to provide information to guide dose selection for a 90-day study. The dogs were given regular opportunity for exercise/socialization during the 20-day acclimation/pretreatment period. The animals were exempted from exercise during the 14-day exposure period due to the nature of the test article, which is known to cause large increases in heart rate. The exemptions were approved to minimize the excess risk and distress to the animals. The animals were given a great deal of human attention every day to reduce the potential for stress.

ANIMAL WELFARE ACT COMPLIANCE STATEMENT

(This statement is included in all animal study protocols)

This study will comply with all applicable sections of the Final Rules of the Animal Welfare Act regulations (9CFR). The Sponsor should make particular note of the following:

1. The Sponsor signature on this protocol documents for the Study Director the Sponsor's assurance that the study described in this protocol does not unnecessarily duplicate previous experiments.
2. Whenever possible, procedures used in this study have been designed to avoid or minimize discomfort, distress or pain to animals. All methods are described in this study protocol or in written laboratory Standard Operating Procedures.

31R0089

USDA ANNUAL REPORT-

REPORTING PERIOD: OCTOBER 1, 1998 THRU SEPTEMBER 30, 1999

FACILITY REGISTRATION NUMBER: 31-R-0089

ANIMAL WELFARE ACT COMPLIANCE STATEMENT- (continued)

- 3. **Animals that experience severe or chronic pain or distress that cannot be relieved will be painlessly euthanized as deemed appropriate by the veterinary staff and Study Director. The Sponsor will be advised by the Study Director of all circumstances which could lead to this action in as timely manner as possible.**

- 4. **Methods of euthanasia used during this study are in conformance with the above-referenced regulation.**

Optional Column E Explanation Form

NOV 29 1999

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 16-R-0029
2. Number See attached of animals used in this study.
3. Species (common name) Attached of animals used in this study.
4. Explain the procedure producing pain and/or distress.

See attached

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

See attached

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

NOV 29 1999

16R0029

E4

The 67 dogs assigned to column E of this report were included in toxicology or safety assessment procedures in which, to meet Food and Drug Administration requirements under Good Laboratory Practice regulations (21 CFR 58.120, 43 CFR 60013) a limited number of animals must be exposed to test compound dose levels toxic to the animal. Clinical signs produced by some test compounds at toxic dose levels may be distressful or painful to the animal, if only transiently. To intercede prematurely would invalidate the procedure, requiring its repetition and the consequent use of more animals.

NOV 29 1999

16R0029

The 491 guinea pigs assigned to column E of this report were included in toxicology or safety assessment procedures in which, to meet Food and Drug Administration requirements under Good Laboratory Practice regulations (21 CFR 58.120, 43 CFR 60013) positive control animals must be sensitized, then challenged by intradermal injection resulting in a transient inflammatory response, which may be distressful or painful to the animals albeit for a strictly limited period. To intercede prematurely would invalidate the procedure, requiring its repetition and the consequent use of more animals.

NOV 29 1999

16R0029

E8

The 38 rabbits assigned to column E of this report were used for hyperimmunization procedures in which adjuvant associated with the antigen of interest produced localized discomfort typical of a subacute inflammatory reaction. The lesions were treated topically to minimize discomfort, and in all cases the least irritating adjuvant was employed that would not have necessitated the use of additional animals. The use of systemic anti-inflammatory drugs would have been counter productive to the objective of antibody production and necessitated the use of more animals.

NOV 29 1999

16-K-0029
16R0029

Primates assigned to column E of this report were used in various toxicology/safety assessment procedures, pharmacologic studies of the inflammatory response or evaluation of the immunomodulatory effects of test compounds.

153 primates (cynomolgus macaques and squirrel monkeys) were employed as models for immune mechanisms or of inflammation when other species (rodents, swine) proved inappropriate. The animals were studied during the early stages of the syndrome before clinical signs become severe. Discomfort is attenuated through the use of analgesic drugs but, because an inflammatory condition is induced and clinical signs may appear, it is anticipated that the monkeys may potentially experience the discomfort which human beings feel during the analogous condition.

78 primates (rhesus macaques) were included in toxicology or safety assessment procedures in which, to meet Food and Drug Administration requirements under Good Laboratory Practice regulations (21 CFR 58.120, 43 CFR 60013) a limited number of animals must be exposed to test compound at dose levels toxic to the animal. Clinical signs produced by some test compounds at toxic levels may be distressful or painful to the animal, if only transiently. To intercede prematurely would invalidate the procedure under the cited regulations, requiring repetition of the study and the consequent use of more animals.

NOV 29 1999

16-R-0029

16R0029

E13

The 3767 rats assigned to column E of this report were included in toxicology/safety assessment procedures or evaluations of the immunologic effects of compounds.

1326 rats were included in toxicology or safety assessment procedures in which, to meet Food and Drug Administration requirements under Good Laboratory Practice regulations (21 CFR 58.120, 43 CFR 60013) a defined number of animals must be exposed to test compound at dose levels toxic to the animal. Clinical signs produced by some test compounds at toxic levels may be distressful or painful to the animal, if only transiently. To intercede prematurely would invalidate the procedure under the cited regulations, requiring repetition of the study and the consequent use of more animals.

2441 rats were used to evaluate the immunologic activity of the test compounds. Animals in test or positive control groups experience, associated with the immune response, inflammation that could be painful or uncomfortable yet cannot be relieved with drugs that could interfere with the phenomena being evaluated. Such discomfort was alleviated as soon as could be scientifically justified without invalidating the results of the procedure.

NOV 29 1999

16-R-0029
16R0029

E13

Mice assigned to Column E of this report were used in various toxicology/safety assessment procedures, pharmacologic studies of inflammatory response or evaluation of the immunologic effects of compounds.

1396 mice were included in toxicology or safety assessment procedures in which to meet Food and Drug Administration requirements under Good Laboratory Practice regulations (21 CFR 58.120, 43 CFR 60013) a defined number of animals must be exposed to test compound at dose levels toxic to the animal. Clinical signs produced by some test compounds at toxic levels may be distressful or painful to the animal, if only transiently. To intercede prematurely would invalidate the procedure under the cited regulations, requiring repetition of the study and the consequent use of more animals.

20,849 mice were used in experimental procedures designed to assess the various immunologic effects of test compounds. Animals in the test or positive control groups experience, associated with the various immune responses, manifestations of the inflammatory response which could be painful or uncomfortable yet could not be relieved with drugs that could interfere with the phenomena being evaluated. Such discomfort was alleviated as soon as could be scientifically justified without invalidating the results of the procedure.

25 mice were used for the production of immune proteins or inflammatory cells which are essential reagents of several in vitro tests, which are used to screen compounds for activity or to evaluate mechanisms and which replace live animals.

PAIN NOT ALLEVIATED JUSTIFICATION
(RAT, MOUSE, RABBIT)

Two hundred (200) rats were used to test a militarily unique compound via the inhalation route to establish relative importance of exposure concentration and duration on the probability of toxic and lethal responses. Historically, in studies designed to generate lethal dose-response curves, it has been assumed that approximately half of the exposed animals would be expected to die and that this level of response may potentially be associated with pain, discomfort, and/or distress. For this study, the use of anesthetic/analgesic drugs during exposure may compromise the results of the proposed studies due to the fact that this class of compound may alter the respiratory minute volume and thus the dose of test compound that the animal receives. In addition, the expression of toxic signs may be altered by such treatment. Clement and Coperman (1984) suggest that chemical agent-induced convulsion and death are not necessarily associated with pain. Clement and Coperman (1984) have reported that Soman and Sarin induce a long-lasting naloxone-reversible analgesia in mice, which was not due to physical incapacitation.

Twenty-six (26) mice and 71 rabbits were tested with a previously untested chemical of military interest. The material was tested intravenously in mice and both intravenously and dermally in rabbits. The animals either died or suffered convulsive seizures during the test. These severe toxic signs could not be alleviated so that accurate test data could be collected. The data collected were important for several reasons: 1) to establish the toxicological profile of the chemical; 2) establish data to be used for human estimates; 3) establish data from which therapy/prophylaxis could be established; and 4) data would be included in material safety data sheets as a warning to potential users or in support to chemical staff in case of accidental exposures.

PAIN ALLEVIATED JUSTIFICATION
(RAT, MOUSE, RABBIT, FERRET)

The U.S. Army Edgewood Chemical Biological Center conducts a quality control/quality assurance program to ensure that rodents are free of adventitious murine viruses. The animals (36 rats, 14 mice, and 8 rabbits) were used for the health-monitoring program. These animals were anesthetized prior to bleeding and necropsy. Eleven (11) ferrets were anesthetized; anesthesia was required because animals need to be immobilized for testing.

NOV 29 1999

This report is required by law (7 USC 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided in Section 2150.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment and use of animals, including appropriate use of anesthetic and tranquilizing drugs prior to, during and following actual research, teaching, testing, surgery or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (ACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 51-F-0016

2. Number 30 of animals used in this study.

3. Species (common name) Guinea Pig of animals used in this study.

4. Explain the procedure producing pain and/or distress.

Herpes simplex virus 1 and 2 (HSV 1 and HSV 2) are pathogens of human oral or genital herpes. Infection of humans by HSV 1 and HSV 2 results in local virus replication at the inoculation site (eye, oral or genital); then it spreads through sensory nerves to the regional ganglia (trigeminal or dorsal root ganglia) where the virus establishes a latent infection. Those viruses in ganglia can reactivate to cause recurrent outbreaks of disease over the course of a person's life. Both viral and host factors are thought to play a role in the maintenance of HSV 1 or HSV 2 in the latent state, and these factors may also influence rates of reactivation.

The mechanism of HSV latent infection and reactivation are poorly understood. Specific viral genes appear to be involved in the establishment, maintenance and reactivation of latency.

The animal model is essential for the study of HSV pathogenesis and latency due to the poorly understood interaction between virus and host that allow latency to occur, and is necessary for the study of vaccines, antiviral drugs or passive protection of antibody before clinical testing. No computer simulation or cell culture model has successfully mimicked the above processes.

This study is designed to evaluate the effects of mutations in different regions of the virus genome on the course of latent infection. The guinea pig is the only model for HSV2 acute infection and spontaneous recurrent disease. Spontaneous recurrent disease must occur in order to assess the effects of the mutations made in the virus genome. Smaller animals such as the mouse can be latently infected with HSV2, but they do not experience spontaneous recurrent disease.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.

There are six possible routes of infection used to study herpes simplex virus pathogenesis in animal models. Virus can be given via the skin, ear, vagina, eye, footpad or systemically. Herpes infection at any of these sites can spread to central nervous system tissue and lead to death of the

NOV 29 1999

animal from HSV-induced neuritis. We use the vaginal route of infection because we are most interested in viral latency and the regional ganglia serving these tissues are most amenable to study.

HSV infection may cause no lesion, vesicle formation, or ulceration. Animals may experience pain during the acute phase of infection with HSV2 depending on the severity of infection. The acute infection lasts 15 days after which the virus is latent. During this latent phase, although animals have spontaneous recurrences, the lesions are milder--from a reddening of an area to a small vesicle--and are not believed to be painful.

Animals are carefully observed and scored daily for the development and location of lesions post-inoculation.

Scoring of Lesions

Score 0	No lesion
Score 1	Focal redness and few small vesicles
Score 2	Several vesicles
Score 3	Progressive vesicle formation
Score 4	Ulceration and maceration and/or hindlimb paralysis

Acute infections must be permitted to occur and resolve in order to study latency and spontaneous recurrence. Lesions of the severity of a score 3 or 4 are only seen in the acute phase of the infection. Scores of 3 and 4 are believed to be painful for approximately 5 to 7 days after they develop. Hindlimb paralysis and/or bacterial superinfection of the genital ulcers may also develop during this time. Both genital lesions and hindlimb paralysis usually resolve within 2 to 10 days after onset. The lesions may then recur with recurrences usually lasting 2-3 days. Between recurrences, animals are asymptomatic. With time, recurrences become less frequent.

Anesthetic or analgesic agents cannot be used, as these agents would attenuate the immune response, interfering with disease pathogenesis and/or reactivation of latent infection.

Up to 60% of infected animals develop lesions warranting a score of 3 or 4. Of these, approximately 10% develop persistent macerations in the genital area that do not resolve after 10 days. If the genital macerations have not resolved by the 11th day, or one hindlimb is paralyzed for 11 days, the animal is euthanized.

The investigator must inform the veterinary staff of the commencement of studies which include animals that will experience pain or distress. When animals are placed on studies in which morbidity is anticipated, the experimental endpoint must be clearly indicated on the cage card and contact information for investigators MUST be provided to the veterinary staff. This will allow the veterinary staff to ensure appropriate monitoring of animals which are expected to exhibit more than minimal or transient morbidity prior to the experimental endpoint. In animals that are showing signs of paresis or paralysis, the urinary bladder will be monitored for urinary retention. The urinary bladder will be expressed at least once a day in animals experiencing

NOV 29 1999

urinary retention.

In the event that animal care personnel identify animals that appear to be succumbing to infection (persistent maceration, progressive paralysis, paralysis of both hindlimbs, moribundity), the investigator performing the experiment is notified in order to collect fresh tissues and the animals are euthanized. The animals will be euthanized by the close of business on the day of investigator notification, unless an exception is approved by the facility veterinarian .

In accordance with animal health monitoring Standard Operating Procedures animal health observations will be conducted by veterinary personnel twice daily on week days and once daily on weekends and holidays. The institutional guideline, Endpoints in Animal Protocols, requires that animals showing signs of morbidity be observed twice daily 365 days a year unless an exception is granted by the IACUC. To assist investigators with compliance with the guideline, the following procedure is employed: If an animal shows signs of morbidity on a Friday afternoon (hunched, not eating, persistent or progressive ulceration and maceration), the veterinary staff will notify the investigator conducting the experiment on Friday afternoon in order to either make arrangements for the investigator to euthanize the animal and collect tissues by close of business Friday, or for the investigator to perform afternoon observations on the animal(s) on weekends and holidays. The names of personnel to do weekend/holiday monitoring will be clearly posted on the cage cards as Investigator 2.

Over the past year, thirteen animals experienced pain due to development of lesions warranting a score of 3 or 4 and/or distress due to hind limb paralysis. Based on this experience we do not expect that more than 30 animals will develop painful lesions during the coming year.

Raleigh, NC 27606
Reference: USDA Annual Report (Registration No.: 14-F-0009)

Dear Dr. Goldentyer:

The enclosed documents represent the U.S.D.A. Human Nutrition Research Center on Aging at Tufts University's "Annual Report of Research Facilities" for the Federal fiscal year, October 1, 1998 through September 30, 1999. Aspects of this report that require comment are:

1) Animals reported under Category E:

- a) Inflammatory Bowel Disease (IBD) was induced in two hundred (200) mice to refine an animal model analogous to the human disease so that therapeutic interventions could be evaluated in future studies. Animals that developed IBD experienced pain/distress analogous to the human rheumatoid arthritis situation.
- b) Pre-malignant cell growth was induced in the colon of fifty-five (55) mice. Although there was no pain associated with these pre-malignant changes, the use of the carcinogen may have been associated with some discomfort related to anorexia.
- c) Mild arthritis was induced in forty (40) rats as an animal model of arthritis. Body composition, cytokine production and measurements of physiological aging were made before, during and after the development of the inflammatory process. Animals that developed arthritis experienced pain/distress analogous to the human rheumatoid arthritis situation.

Should you have any questions regarding the report, please do not hesitate to contact me.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 51-F-0001

NOV 17 1999

2. Number 12 of animals used in this study.

3. Species Guinea Pig of animals used in this study.

4. Explain the procedure producing pain and/or distress. Sereny Test

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.

The value of the Sereny test lies in the fact it is an immunocompetent, live animal model for Shigella invasion, multiplication and spread. Analgesics are immunosuppressive. The immunocompromised nature of the animal after analgesic treatment can alter progression of the inflammation, which is, provoked by the bacterial challenge and compromise the validity of the test.

The use of analgesic agents actually has an adverse effect on the health of the animals if reduced weight gain, lethargy and suppression of the self-grooming behavior are considered as indicators. The general lethargy of the animals, which leads to a decrease in their normal grooming behavior, has a significant impact on the Sereny test. Opioid sedation of the animals and decreased grooming behavior causes a significant buildup of exudate around the eye during the course of a positive reaction. These effect seals the eye shut, and the animal can no longer voluntarily open the eye, it is impossible for the investigator to visually assess the extent of conjunctivitis. In order to do so the eye must be physically opened by the investigator to examine the infected cornea and conjunctiva.

42F0008

November 30, 1999

Annual report of the Center for Veterinary Biologics - Laboratory (CVB-L) for the period of October 1, 1998, through September 30, 1999.

1. Statement of reasons for not using drugs in experiments involving pain and distress:

The CVB-L's main function is the testing of veterinary biologicals for safety, efficacy, and purity. Drugs to alleviate pain and distress produced by the infectious disease agents are contraindicated as they suppress the immune system causing the disease to be more severe and run a longer course. Most cases are also not allowed according to the requirements found in the 9 CFR, Chapter 113. Making sick animals comfortable and disturbing them as little as possible provides better treatment to these animals and quicker recovery than occurs by administering pain relievers. Euthanasia or curative treatments are employed as soon as allowed by the Animal Care and Use Committee approved animal use procedure.

2. Exceptions to adherence to the standards and regulations under the Act: None

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report).	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs					
5. Cats					
6. Guinea Pigs	2	26		8	34
7. Hamsters					
8. Rabbits			92		92
9. Non-human Primates					
10. Sheep		528			528
11. Pigs		100			100
12. Other Farm Animals Horses/Ponies		6	1		7
13. Other Animals Cattle		11			11

ASSURANCE STATEMENTS

- 1). Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2). Each principal investigator has considered alternatives to painful procedures.
- 3). This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4). The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

11-30-99

42F 0004

November 30, 1999

Annual report of the National Veterinary Services Laboratories (NVSL) for the period of October 1, 1998, through September 30, 1999.

1. Statement of reasons for not using drugs in experiments involving pain and distress:

The NVSL's main function is the diagnosis of animal diseases. Drugs to alleviate pain and distress produced by the infectious disease agents used, are contraindicated as they suppress the immune system causing the disease to be more severe and run a longer course. Making the animals comfortable and disturbing them as little as possible provides better treatment to these animals and quicker recovery than occurs by administering pain relievers. The use of drugs such as anesthetics, tranquilizers, or analgesics could also interfere with the expression of the clinical signs, gross pathology, histopathology, and other assay for the diseases. Misdiagnosis could result in the use of more animals to repeat the testing. Euthanasia or curative treatments are employed as soon as allowed by the Animal Care and Use Committee approved animal use procedure.

2. Exceptions to adherence to the standards and regulations under the Act: None

42 F0004

FY99

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 42-F-0004
2. Number 8 of animals used in this study.
3. Species (common name) Guinea pigs of animal used in this study.
4. Explain the procedure producing pain and/or distress.

Guinea pigs were given Mycobacterium isolates from submitted diagnostic cases for isolate identification and pathogenically testing. These isolates were from suspected tuberculosis cases in animals. Eight animal became sick from the testing.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

The disease must be allowed to manifest itself for diagnostic purposes.
Pain-alleviating drugs would interfere with the primary production of disease and present a biosafety hazard to personnel.

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

1999 - Explanation of animals reported in Section E

1. Eight (8) Dogs - Pacemakers were implanted in these animals in order to pace the heart so that the animals would develop heart failure. Some of these animals experienced some distress in the later stages of heart failure development. Any distress encountered is usually a direct result of physiologic changes that are part of the disease process in its later stages. The use of anaesthetic, analgesic or tranquilizing agents was not necessary. These animals could not be treated with pharmacologic means to modify the disease because previous experience had shown that use of these drugs is not possible in later stages of heart failure development due to the sensitivity of the animals to such agents. Many of the available agents have modifying effects on autonomic nervous system activity (which is the dependent variable in our studies), compromise the animals hemodynamic status which may lead to death, or create other unacceptable changes in the animals physiology which cannot be controlled appropriately. Any animal that showed signs of significant discomfort that could not be ameliorated by medications such as lasex was used in acute experiments or was euthanized.

2. Four (4) Rabbits - Because TiterMax with antigen did not elicit a satisfactory antibody response, four rabbits were given an injection of antigen in complete Freund's adjuvant. The rabbits were inoculated in the axilla and groin (0.25 ml/site). None of the animals showed gross evidence of pain or discomfort following the injection or during the first week after the injection. One would anticipate that the animals would chew at the injection site if it were uncomfortable; this did not happen. In the past giving procaine with the initial injection made no difference in the reactions of the rabbits.

"Item E" of the APHIS Form 7023 states; Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or test. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report.)

The five animals listed under item E of the USDA "Animal Report of Research Facility", were used on Protocols where the Rabbits were injected with Freund's complete adjuvant only on the first injection for antibody production to small amounts of isolated peptides/proteins that are weakly antigenic. The Protocols covering these animals are:

VAMC SLC Protocol # 98/1 "Pathogenesis of Emphysema" 2 Rabbits

VAMC SLC Protocol # 98/7 "Regulation of the cAMP-Specific Phosphodiesterase" 3 Rabbits

In order to achieve antibody production it is essential to use small amounts of Freund's adjuvant for the initial injection only. The Animal Protocols have been reviewed and approved by the Salt Lake City VAMC IACUC and by National VA Veterinary Officer review as part of the Merit Review Process.

Attachment to APHIS Form 7023

Pain Category "E" Justification

Protocol 1- 12 Canines

Nausea, retching and vomiting are associated with acute, but not chronic, gastrointestinal distress during the response to the cytoprotective agent or radiation. In order to determine whether we can alleviate it with said 5-HT₃ receptor antagonist anti-emetics, we must determine the degree to which it appears under control conditions. Some analgesics have been shown to interfere with radiation-induced emesis but further may influence the immune system. The latter would confound future work in irradiated animals. Opioids and sedatives are typically anti-emetic and will thus interfere with the response we are studying or confound the anti-emetic properties of Kytril®. Likewise, these compounds can interfere with neutrophil function, which would also confound any future radiation studies. There may be some discomfort associated with the cardiovascular hypotension, if it occurs. However, since the hypotensive effects of Amifostine® are unclear and may be integrally linked with the nausea and vomiting, we also cannot relieve this symptom.

Protocol 2- 8 Canines

Analgesics would interfere with the identification of clinical signs, hematological parameters, and survivability and therefore will not be administered. For example, analgesics may influence the immune system, which is one of the major targets of radiation.

Sedatives and opiates are also known to affect neutrophil functions. Since neutrophils are affected by irradiation, use of sedatives could introduce a possible confounding effect on neutrophil function, a marker in this study; and therefore, sedatives will not be used.

The effects of analgesics on prostaglandins are known. Iloprost and misoprostol are two prostaglandin analogues used as protective drugs. In fact, it has been shown in mice that the individual toxicity's of iloprost and misoprostol are annulled by mixing them together as will be done in this study.

Protocol 3- 882 Mice

We are looking for neurological signs as an endpoint in this protocol. We cannot use drugs that will mimic or mask these signs or interfere with the immune response.

Opiates are reported to be associated with histamine release and they may cause CNS side effects that can confound the results of this particular study.

Glucorticoids lower seizure threshold and alter mood and behavior and at higher doses can alter the immune system and mask clinical signs of infection.

Non-Steroidal Anti-inflammatory Drugs (NSAIDs) may result in neurological toxicity as one of their adverse effects.

Protocol 4- 17 Guinea Pigs

These experiments will set up a model which may prove useful for future studies that explore countermeasures and treatment on the effects of radiation on EEG and of the possible interactive effects of radiation, nerve agents, and sleep deprivation.

Protocol 5- 3706 Mice

These tests are designed to access the change in the response of mice to the effects of ionizing radiation and bacterial infection. Radiation causes complex, adverse changes in many tissues. The drugs to be tested are intended to alleviate these adverse effects of radiation and infections. Many pathogenic bacteria cause common responses and disease process in animals, which cannot be mimicked readily by substitutes.

Protocol 6- 68 Mice

Analgesics adversely affect undamaged hematopoietic cells and interfere with NADPH oxidase, an important phagocytic enzyme.

Opioid analgesics are known to cause immunomodulation.

Non-narcotic analgesics are anti-inflammatory and would interfere with the inflammatory responses of the normal tissue to *Shigella* and irradiation.

Protocol 7- 206 Mice

Analgesics will not be used because of their adverse effects on undamaged immune system cells, which would interfere with the end results of this study.

Protocol 8- 322 Mice

The Pro-Neuron compounds have already been tested in cell culture and final testing must be performed in intact animals.

Pro-Neuron has evidence that the pain relievers that would be expected to exert any analgesic effect in mice might also affect the activity of the compound in such a way as to confuse the experimental results of bone marrow transplantation and irradiation. The studies which uncovered this evidence were performed at Pro-Neuron and are proprietary in nature. Therefore, pain relievers will not be given, as this would ultimately result in a waste of animals and effort.

Protocol 9- 299 Mice

Analgesic compounds cause adverse effects on undamaged hematopoietic cells and interferes with NADPH oxidase, a key polymorphonuclear leukocyte involved in the ability of these cells to phagocytize and kill bacteria.

Opioid analgesics are immunomodulatory.

Protocol 10- 3978 Mice

Opioid analgesics are immunomodulatory non-narcotic analgesics with anti-inflammatory efficacy. These would interfere with the inflammatory responses of the hemopoietic tissues to infections and, therefore, cause adverse effects on undamaged hematopoietic cells. As a result, opioid analgesics would interfere with NADPH oxidase, a key polymorphonuclear leukocyte enzyme that is involved in the ability of these polymorphonuclear leukocyte cells to phagocytize and kill bacteria.

Protocol 11- 372 Mice; 44 Guinea pigs

The doses of ionizing radiation to be used are sub-lethal and will not cause pain or distress, however we can presume that infection will cause discomfort. In vaccination and therapeutic experiments we can presume that the majority of the vaccinated and a portion of the drug-treated animals will be protected and pain-free. However we will be testing efficacy following the unknown effects of radiation on immunity thus we will assume that all animals that receive radiation and bacterial challenge will be in the un-alleviated pain or distress category.

Protocol 12-401 Mice

All animals will receive a local anesthetic for pellet placement, however the drug delivery system being tested in this protocol involves subcutaneous release requiring the biological interactions at the tissue

RECEIVED

NOV 8 1964

51 F0003

level which would not be achievable in non-animal models. The implanted drugs may have a pain/distress alleviating action. Other drugs with known pharmacokinetic actions will mask the efficacy of these drugs and render the study invalid; so they should not be used.

The rats reported here as Category E are under one protocol. The protocol details a model for Experimental Allergic Neuritis. This model is an immune mediated peripheral neuropathy which over the space of 20 days results in a hind limb paralysis from which recovery occurs. During this time rats receive supportive care but no analgesics because they may interfere with the progression of the disease state through immune modification. Although much unrelieved pain is probably not involved, the partially paralytic state probably does cause a degree of distress.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL
(Chief Executive Officer or Legally Responsible Institutional Official)

I certify that the above is true, correct, and complete (7 USC Section 2143).

---	--	-------------------------

Justification for Column E entries:

Tests which may cause pain or distress and for which the use of anesthetic, analgesic, or tranquilizing drugs would have adversely affected the animals, procedures, results, or interpretation:

Note: All of the following procedures are outlined in the approved animal care and use protocol and were discussed and approved by the Ames Research Center Institutional Animal Care and Use Committee.

The ultimate goal of the experiments with gerbils is to increase the understanding of the adaptive or compensatory processes that, from a clinical perspective, allow individuals to adjust to the loss of inner ear function following injury or disease, and from a space medicine perspective, allow astronauts to operate effectively after several days in a new gravitational environment. The information obtained from this and future studies will contribute to the development of treatments to facilitate the compensatory or adaptation process so that it will occur more rapidly, thus decreasing the period of dysfunction in patients and astronauts. A total of 25 gerbils were used in each procedure.

Centrifugation: 25

The gerbil is a standard model for neurophysiological and morphological/histochemical studies of how the vestibular system, including the gravity sensors, functions, because the sensors and their neural connections to the brain are easily accessible to surgical manipulation in the gerbil, but not the rat or the mouse. Gerbils were previously used in altered G experiments to confirm that normal gerbils will adapt readily to hyper G and show modification in vestibular reflexes following hyper G exposure. Further, it was previously confirmed that animal well-being was not compromised by the standard hyper G exposure paradigm. In order to investigate the vestibular system reaction to hyper G, it was necessary to centrifuge animals at 1.5G for several days.

While initial exposure to centrifugation may be stressful and cause some slight discomfort, previous studies demonstrate that after 2 to 4 days of exposure to hyper G, gerbils begin to gain weight and return to normal levels of activity, feeding and drinking, and other signs of stress disappear. The mild stress at the beginning of exposure is thought to be an integral part of adaptation and associated with the initiation of the process. Analgesia or anesthesia during exposure to centrifugation would invalidate the study because it would impact the voluntary movements of the animals required for normal sensory-motor adaptation, and normal neural function during this process of adaptation. Animals were observed, handled, and weighed daily and if the well-being of any animal was compromised, i.e. unexpected weight loss, inability to move around the cage, or failure to thrive, it would have been removed from the study. All of the gerbils did adapt within two to four days of initiation of centrifugation.

Swimming Test: Species: Gerbil Number: 25

Swimming was used as an indicator of vestibular function and as part of selection criteria for centrifugation. Only animals showing normal swimming behavior were chosen for centrifugation.

Any stress caused by swimming is minimized because water in the swim tank is maintained near body temperature (35 - 37°C) and the duration of swimming is brief (<20 sec). Furthermore, swimming is a part of the normal behavioral repertoire of the rodent. The use of tranquilizers would impact vestibular and neuromuscular circuitry, invalidating the testing and potentially endangering the well-being of the subjects .

CERTIFICATION BY HEADQUARTERS RESEARCH FACILITY OFFICIAL
(Chief Executive Officer or Legally Responsible Institutional Official)

I certify that the above is true, correct, and complete (7 USC Section 2143)

(b)(6) (b)(7)(C)

	NAME & TITLE OF C.E.O. OR INSTITUTIONAL OFFICIAL (Type or Print)	DATE SIGNED
	(b)(6) (b)(7)(C)	11/4/99

During fiscal year 1999, two animal research protocols utilizing 90 animals each were active. Both of these studies tested the efficacy of novel treatment strategies in the prevention of experimental Gram positive soft tissue infection, specifically those infections caused by *Clostridium perfringens* and *Streptococcus pyogenes*. Infection with these viable organisms produces progressive infection which was associated with pain. No analgesics were administered since their presence alters the natural course of the infection under study. [See reference: [REDACTED] Could nonsteroidal antiinflammatory drugs (NSAIDs) enhance the progression of bacterial infections to toxic shock syndrome? Clin Infect Dis 1995;32:977-80]. In addition, although Tylenol would serve to reduce pain, its ability to also reduce fever suggested it would alter other host responses to infection.

RABBITS

The model of doxorubicin cardiotoxicity caused rabbits to experience discomfort. Drugs that reduce the discomfort have been reported to interfere with the changes in molecular markers during the development of doxorubicin cardiotoxicity. Since we were testing doxorubicin cardiotoxicity, those drugs were not administered.

Species: Rabbit
affected: 6
Col. E

MICE

Injections of cisplatin and GPX-325 caused discomfort in the mice. Four days after the injections of cisplatin and GPX-325, blood was collected from the mice for measuring creatinine and blood urea nitrogen to identify the cisplatin induced nephrotoxicity and its reversal by GPX-325.

Compounds that might lessen the discomfort and pain may alter the effect of GPX-325. Therefore, these compounds were not injected.

Species: Mice
affected: 126
Col. E

(b)(6)
(b)(7)(C)

October 25, 1999

82V0001

Our laboratory developed a chronic rabbit model of doxorubicin cardiotoxicity to investigate the mechanisms of cardiac lesions produced by doxorubicin. This entailed injecting 1 mg/kg doxorubicin i.v. twice/week for 8 consecutive weeks. In addition to development of cardiotoxicity, this chronic regimen of doxorubicin administration was associated with a variable (no change to moderate) amount weight loss and appetite suppression. Also, there was a transient hair loss in some rabbits that was reversible. There were no attempts to reverse the hair loss or appetite suppression. It is unclear whether anabolic steroids would prevent weight loss in doxorubicin treated rabbits. Anabolic steroids may, however, confound or mask analysis of cardiac lesions produced by doxorubicin and invalidate the study design. Other therapeutic possibilities such as vitamin B complex have unproven efficacy to prevent weight loss or appetite suppression in chronic models of doxorubicin administration.

(b)(7)(C)

Species: NZW Rabbit

Number affected: 5 from column E and 10 from column B

October 27, 1999

Dear Sir or Madam:

We use rats for chronic anthracycline cardiotoxicity studies. They develop cardiac dysfunction and also renal pathology. The anthracycline toxicity causes anorexia and weight loss. There is no treatment available that can counteract these problems, unfortunately. We use the lowest possible dose of anthracycline to avoid even greater weight loss. We do not think the animals suffer physical pain requiring analgesics.

We also include rats in single dose anthracycline pharmacokinetic studies. This protocol does not cause significant distress to the animals.

Sincerely,

(b)(6), (b)(7)(C)

To Whom it May Concern,

The following is a more in depth explanation of the procedures producing pain or distress to animals listed in the E category:

Six canines were used to determine the cardiovascular effects of test article in conscious animals. Animals were anesthetized and instrumented with catheters to measure venous and arterial pressures, a flow probe to measure cardiac output, and ECG leads to measure cardiac rhythm. The animals recovered following the instrumentation surgery, and were studied in the conscious state, since conscious animals are more representative of the responses, which might be observed in conscious humans. All surgical studies were conducted under sterile conditions with anesthesia.

Forty canines were used in a toxicity study. No concurrent medicines were allowed due to interference with the test article in the study.

Seven canines were used to evaluate the feasibility of intraprostatic electroporation. This was conducted under sterile conditions with anesthesia.

All 89 swine were used in a sterile surgical study that involved recovery of the animals. Analgesics were administered throughout the study.

All animals were placed in this category due to unknown effects of the novel test articles being used, and were under supervision of a veterinarian throughout the studies.

Please contact me if there are any further questions.

Sincerely,

bb, b7c

November 29, 1999

Dear Dr. Gibbens:

Northview Pacific Laboratories, Inc. is an AAALAC accredited animal facility dedicated to the humane care and use of laboratory animals.

Northview's Institutional Animal Care and Use Committee (IACUC) meets two-to-four times per year in order to review ongoing experimental procedures involving animals and to vote on any new proposals for procedures involving animals. Twice a year, at six month intervals, the IACUC audits the company's animal care program for compliance with the Animal Welfare Act, and conducts an inspection of the company's animal facility. The IACUC submits a report to the company's Institutional Official noting any changes to the company's animal care program, any areas of noncompliance with AWA regulations, any problems or deficiencies that require corrective action, as well as any suggestions for future consideration.

Northview's IACUC assures that our program is in compliance both with the AWA and the NIH Guide for the Care and Use of Laboratory Animals.

71R0014

Attachment to 1999 USDA Annual Report of Research Facility
GTC Redfield Laboratories
Registration Number 71-R-014

Redfield Laboratories is a division of Genzyme Transgenics Corporation (GTC). Redfield Laboratories is a general toxicology facility and one of the five GTC pre-clinical toxicology testing laboratories in the United States with the toxicology testing expertise needed to meet EPA, OECD, FDA, and Japanese regulatory requirements. Redfield Laboratories performs toxicology and pharmacology testing of drugs, medical devices, consumer products, agricultural and industrial chemicals, veterinary products, petrochemicals, and phytochemicals.

Individual research projects were classified in Column E on the accompanying report. These studies involved the administration of test articles to animals by a variety of routes. Under the procedures specified in each of the research protocols, many of the animals probably have been subjected to more than momentary or slight pain and distress since these studies were performed to determine the potential toxicity of test articles. All of these protocols were approved by Redfield Laboratories' Institutional Animal Care and Use Committee (IACUC) and no anesthetic, analgesic, or tranquilizing drugs were used during the conduct of the studies since these drugs could potentially adversely affect the results and/or interpretation of the studies. However, to prevent unnecessary pain and suffering, animals were closely monitored by the attending veterinarian, technical and animal care staff, and animals determined to be severely compromised and/or moribund were humanely euthanized.

Explanation of procedures resulting in a Column E classification:

Individual research studies were conducted with the animals in column E. These studies involved the administration of test articles to animals by various routes of exposure: oral (capsule or gavage), intradermal, subcutaneous or intravenous injection, dermal or ocular application. Under the procedures specified in the research protocols, animals were probably subjected to more than momentary or slight pain and distress, since these studies were performed to determine the potential toxicity of test articles. The use of drugs to relieve pain or distress would compromise these studies for the following reasons: 1) signs elicited by exposure to the test article could not be masked since the study objectives were to obtain and document toxic responses; 2) an analgesic drug may affect the metabolism or other actions of the material under test and thereby affect the research results; 3) it was not practicable to treat only affected animals because such treatment may affect response to the test material in unforeseen ways and preclude comparison with other, non-treated animals. To prevent unnecessary pain and suffering, any animals determined to be severely compromised and/or moribund were humanely euthanized upon approval of the Study Director or the attending veterinarian. All of the studies were conducted for clients/sponsors with reported results and conclusions to be submitted to various regulatory agencies to support applications for product approval.

Briefly listed are the **Column E** studies involving the animal species covered by the Animal Welfare Act (AWA) which were conducted during the period of October 1 through September 30 at Redfield Laboratories. See attached:

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets if necessary or use APHS FORM 7023A)					
A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress in these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NO. OF ANIMALS (Cols. C + D + E)
4. Dogs	5				0
5. Cats	0				0
6. Guinea Pigs	0				0
7. Hamsters	0				0
8. Rabbits	0				0
9. Non-human Primates	64				0
10. Sheep	0				0
11. Pigs	0				0
12. Other Farm Animals	0				0
13. Other Animals	0				0

- ASSURANCE STATEMENTS**
- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
 - 2) Each principal investigator has considered alternatives to painful procedures
 - 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC) A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
 - 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

TUFTS UNIVERSITY
School of Veterinary Medicine

Division of Laboratory Animal Medicine

Tufts University School of Veterinary Medicine
200 Westboro Road, North Grafton, MA
1999 Annual Report of Research Facility
Registration No. 14-R-0065

Explanation for the "number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests."

Twenty-four calves were used to produce large numbers of *Cryptosporidium parvum* oocysts for use in several research programs. Cell culture techniques do not produce significant numbers of organisms necessitating the *in vivo* model for propagation. Four days after oral inoculation, the calf develops diarrhea and begins to shed oocysts. For approximately 10 days during collection of oocysts, the calf may experience some discomfort or distress caused by the self-limiting diarrhea. During this time, the calf is closely monitored at least 3 times daily and usually maintains normal appetite, activity level, and hydration status. Calves are euthanized approximately 10 days after the onset of clinical signs as the level of oocyst shedding declines. Since shedding of large numbers of oocysts is dependent on the development of diarrhea, antidiarrheal agents and motility modifiers cannot be administered to the calves. Although not expected, calves developing significant signs of distress, including dehydration, depression, or anorexia are euthanized immediately.

Two hundred and twelve piglets were used to study various enteric pathogens including cryptosporidia, microsporidia, *Escherichia coli*, *Clostridium difficile*, and *Candida albicans*. Piglets may develop moderate diarrhea after oral inoculation and may experience some discomfort or distress caused by the diarrhea for the duration of the 7-21 day experimental infection. Antidiarrheal treatments cannot be administered in order to study the progression of the disease. Piglets are closely monitored at least 3 times daily and those developing significant signs of distress, including dehydration, depression, or anorexia are euthanized immediately.

*These animals are used in a safety test as outlined in the CFR 21.610.11.

The material injected subcutaneously has (b)(4) and must be heated to approximately 40°—45° C to facilitate injection into the test animal. This temperature causes discomfort to the animal for the first 24 hours. As requested by the FDA, the use of analgesics or tranquilizers are not allowed to be used because of the possibility of interfering with the results.

11/9/99

33R0090

TOX MONITOR LABORATORIES, INC.
33 West Chicago Avenue
Oak Park, Illinois 60302

November 15, 1999

As per Section 2.36 (a), (1), (2), and (3), the following assurance are made.

Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, surgery, or experimentation were followed by this laboratory. All animals use protocols were reviewed by the Institutional Animal Care and Use Committee (IACUC) to ensure that professionally acceptable standards are included. The attending veterinarian has reviewed these as a member of IACUC.

The study director has considered all possible alternatives to painful procedures.

The laboratory adheres to the standards and regulations set forth under the Animal Welfare Act (Act). Any exceptions to the standard and regulations must be specified and explained by the principal investigator and approved by the IACUC. Included below is an explanation to procedures conducted that may have produced some distress in which anesthetic, analgesic, or tranquilizing drugs were not used and the reasons these drugs could not be used.

As per Section 2.36 (b), (4), the location of animal facilities are at the reporting site only.

Description of procedures in which anesthetic, analgesic, or tranquilizing drugs are not used that may have produced some distress and the reasons such drugs were not used.

144 rabbits were used in (b)(4) where some limited pain or distress may have been involved. This would have occurred as a consequence of exposure, not during the dosing procedure. All animals were euthanized immediately after the study was completed. Since pharmacotoxic observations are a vital part of the study, pain relieving medications and anesthetics would compromise the results.

NOV 22 1999
E.Y. -----

Eli Lilly and Company
Indianapolis, IN 46285

Registration No. 32-R-003

Animals upon which experiments, research, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests.

Species	Number of Animals	Explanation
Monkeys	2	<p>Toxicology</p> <p>These animals were used in the toxicological evaluation of drug candidates. In these studies the degree of toxicity was unexpectedly severe. In the case of one of these monkeys, test compound administration was suspended and supportive veterinary care was provided. The second animal was part of a group wherein compound administration was continued at a reduced dose. Despite careful study design, supportive care, and adjustments to study protocols, animals in toxicology studies used in the evaluation of new drug candidates may experience unanticipated events. These studies are required by U.S. and O.U.S. regulations and guidelines for animal studies to support human clinical trials; specifically CFR Volume 62, #227 and ICH M3.</p>
Dogs	31	<p>Diabetes Research</p> <p>These dogs were used in studies of insulin formulations, insulin like analogs, and or other experimental compounds in development as potential therapies for diabetes.</p> <p>(b) (4)</p> <p>In the course of the experimentation the dogs' basal blood sugar is measured at intervals over a total time course of thirty hours. The dogs are not fed for twelve hours prior to the experiment and for the duration of the experiment itself for a total time period of up to 30 hours. These activities have been reviewed and approved by the Institutional Animal Care and Use Committee and have been observed by the veterinary staff. The dogs are under constant observation during the procedure, are given free access to water and their blood sugar is augmented by</p>

32R 0003

intravenous dextrose injections if needed. The animals do not show clinical indications of 'distress'. They are reported here as required by Policy #11. There are no alternative models or experimental paradigms that replace measurement of basal blood glucose levels in higher mammals over time. Pharmaceutical intervention with sedatives, tranquilizers or analgesics would have no effect on the animals' well being but would invalidate the experimental objectives.

Dogs

1

Toxicology

This dog was used in the early toxicological evaluation of drug candidates. In these studies the degree of toxicity was unexpectedly severe. Test compound administration was suspended and the animal was provided with symptomatic veterinary care. Despite careful study design, supportive care, and adjustments to study protocols, animals in toxicology studies used in the evaluation of new drug candidates may experience unanticipated events. These studies are required by U.S. and O.U.S. regulations and guidelines for animal studies to support human clinical trials; specifically CFR Volume 62, #227 and ICH M3.

Rabbits

37

Cardiovascular Research

Rabbits are used in studies of compounds that have antithrombotic activity previously observed in *in vitro* test systems. In studies where agents are evaluated for oral bioavailability, the animal must be fasted for a period long enough to assure that the stomach is empty and that there would be no interference between ingesta and the absorption of the compound. In the rabbit this period has been determined to be up to forty six hours. These activities have been reviewed and approved by the Institutional Animal Care and Use Committee and have been observed by the veterinary staff. The animals do not show clinical indications of 'distress'. They are reported here as is required by Policy #11. There are no alternative models or experimental paradigms that replace normal gastric emptying time in the rabbit. Pharmaceutical intervention with sedatives, tranquilizers or analgesics would have no effect on the animals' well being but would invalidate the experimental objectives as they have effects on gastrointestinal activity.

Gerbils

353

Cardiovascular Research

These gerbils were used as an animal model of (b)(4) infarction (stroke) in search of therapies that could remedy the condition in man. The end point of the experimentation is histological changes (b)(4) and their modulation with experimental drug therapies. Some of the animals may exhibit subtle changes in behavior which are presumed to be associated with some degree of distress. Anesthetics, analgesics, tranquilizers or other drugs would mask, exacerbate, or otherwise alter neurological assessment and/or test compound effect and thus would adversely affect interpretation of the data.

32R0003

Gerbils

106

Infectious Disease Research

Gerbils were used in evaluating potential therapies for bacterial otitis media. In these short term studies animals may experience febrile responses and/or middle ear discomfort. All compounds used in this experimentation are first tested in one or more *in vitro* systems and only those showing potential efficacy are used in animal models. The anatomy of gerbil ear drainage channels closely mimics the anatomy of the human ear making the animal uniquely suited to the study of this disease. Anesthetics, analgesics, tranquilizers or other drugs would mask, exacerbate, or otherwise alter behavioral assessment and/or test compound effect and thus would adversely affect interpretation of the data.

Exceptions to the Regulations and Standards

Eli Lilly and Company
Indianapolis, IN 46285

NOV 2 1999

Registration No. 32-R-003

1. Identify the IACUC approved exception to the standards

Withholding of food (but not water) from animals for a period in excess of 24 hours.
(Reference: 9 CFR3.54 (a))

2. Describe the IACUC approved exception to the standards

Dogs:

These dogs were used in studies of insulin formulations, insulin like analogs, and or other experimental compounds in development as potential therapies for diabetes. The compounds in question are intended to regulate blood sugar over longer periods of time than the now currently marketed therapies. In the course of the experimentation the dogs' basal blood sugar is measured at intervals over a total time course of thirty hours. The dogs are not fed for twelve hours prior to the experiment and for the duration of the experiment itself for a total time period of up to 30 hours. These activities have been reviewed and approved by the Institutional Animal Care and Use Committee and have been observed by the veterinary staff. The dogs are under constant observation during the procedure, are given free access to water and their blood sugar is augmented by intravenous dextrose injections if needed. The animals do not show clinical indications of 'distress'.

Rabbits

Rabbits are used in studies of compounds that have antithrombotic activity previously observed in *in vitro* test systems. In studies where agents are evaluated for oral bioavailability, the animal must be fasted for a period long enough to assure that the stomach is empty and that there would be no interference between ingesta and the absorption of the compound. In the rabbit this period has been determined to be up to forty six hours. These activities have been reviewed and approved by the Institutional Animal Care and Use Committee and have been observed by the veterinary staff. The animals do not show clinical indications of 'distress'.

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility
- 2) Each principal investigator has considered alternatives to painful procedures
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use

Summary of IACUC Approved Exceptions Permitted By the Standards and Regulations
For The 1998-1999 Annual Report of Research Facility, #21-R-0088
Pfizer Central Research Division
Groton, CT

Pain/Distress Exceptions

Each of the following Animal Care and Use Procedures (ACUP) involved studies in which animals could have experienced pain and/or distress. *The test substances being evaluated are novel compounds; consequently, data on how these compounds react in the animal model and with other chemical entities is very limited or non-existent. Therefore, the use of analgesics or other pain-relieving agents could defeat the objectives of the research by directly interfering with the end point parameter being measured. This interference could give results that are not reliable which would lead to repeating the studies, thus requiring the need to use more animals* For this reason, an exception was granted by the Institutional Animal Care and Use Committee (IACUC) for each. Any incident of pain or distress was limited in duration to that scientifically necessary. In actual practice, many animals involved in such studies were not observed by the investigator to experience pain and/or distress.

ACUP #1223, 1263 Species: Dogs

(b)(4) → This ACUP used 42 animals of which 20 animals showed signs of pain and /or distress based on investigator observations.

ACUP #1292 Species: Dogs

(b)(4) → This ACUP used 28 animals of which 14 animals showed signs of pain and /or distress based on investigator observations.

ACUP #10008 Species: Dogs

(b)(4) → This ACUP used 96 animals of which 30 animals showed signs of pain and /or distress based on investigator observations.

ACUP #1250: Species: Guinea pigs

(b)(4) → This ACUP used 205 animals of which all showed signs of pain and/or distress based on investigator observations.

ACUP #1126 Species: Hamsters

(b)(4) → This ACUP used 35 animals of which 14 animals showed signs of pain and /or distress based on investigator observations.

ACUP #1093, 10215 Species: Hamsters

(b)(4) → This ACUP used 905 animals of which 633 animals showed signs of pain and /or distress based on investigator observations.

Facility #21-R-0088
IACUC Exceptions
1998-1999
Attachment 1

NOV 19 1999

ACUP #1179: Species: Ferrets

(b)(4) → This ACUP used 53 animals of which all animals showed signs of pain and /or distress based on investigator observations.

ACUP #10158: Species: Ferrets

(b)(4) → This ACUP used 54 animals of which all animals showed signs of distress based on investigator observations.

Other Exemptions

ACUP #0361 Species: Dogs

(b)(4) → During this reporting period, this ACUP used 67 animals.

ACUP #0374 Species: Dogs

(b)(4) → During this reporting period, this ACUP used eight animals.

Explanation For Animals Listed In Category E - APHIS Form 7023
For The 1998-1999 Annual Report Of Research Facility, #21-R-0088
Pfizer Central Research Division
Groton, CT

Testing of proprietary compounds is conducted in animals to discover new human therapeutics and in response to federal regulatory requirements for safety evaluation of pharmaceuticals prior to human clinical trials. There are similar requirements prior to clinical trials of animal health products in food animals and companion animals. On occasion, the proprietary compounds cause unexpected pain or distress which can not be foreseen, but which is nevertheless considered during the IACUC's review/approval process. Frequently, the use of pain relieving drugs is not scientifically appropriate in product safety assessment. These studies are designed in accordance with the safety testing guidelines described in the following publications: the Code of Federal Regulations (CFR, 1988), Title 16, Subchapter C [Federal Hazardous Substances Act (FHSA) Regulations], Part 1500 (Hazardous Substances and Articles: Administration and Enforcement Regulations); and the Code of Federal Regulations (CFR, 1992), Title 49, Parts 173.136 (Test for Corrosive Materials) and 173.132 (Test for Toxicity by Skin Absorption) for the testing of materials according to the Department of Transportation (DOT) regulations; the Code of Federal Regulations (CFR, 1995), Title 21, Chapter I, Part 58 (Good Laboratory Practices for Nonclinical Laboratory Studies). There are also occasions when pain relieving drugs cannot be used in drug discovery studies. In the following cases, pain relieving drugs were not used because they would have adversely affected the scientific validity of the study. Any incident of pain or distress was limited in duration to that scientifically necessary. The numbers provided below reflect animals that experienced unrelieved pain and/or distress and were identified in the ACUP exceptions described in Attachment 1. Also identified below with *, are animals that experienced pain/distress due to an unexpected compound or procedure reaction.

<u>Species</u>	<u>Number Affected</u>	<u>Incident</u>
1. Dogs	1	Compound Reaction/Systemic*
2. Dogs	2	Compound Reaction/Central Nervous System*
3. Dogs	3	Compound Reaction/Emesis*
4. Dogs	14	Procedure Reaction/Arthritis
5. Dogs	30	Procedure Reaction/Gastroenteritis
6. Dogs	20	Procedure Reaction/Anxiety-Distress
7. Cats	3	Procedure Reaction/Cardiovascular*
8. Guinea pigs	205	Procedure Reaction/Anxiety-Distress
9. Guinea pigs	7	Compound Reaction/Musculoskeletal*
10. Hamsters	633	Procedure Reaction/Infectious Disease Model
11. Hamsters	14	Procedure Reaction/Respiratory
12. Non-human primates	70	Compound Reaction/Emesis*
13. Rabbits	8	Compound Reaction/Central Nervous System*
14. Rabbits	8	Compound Reaction/Systemic*
15. Ferrets	107	Compound Reaction/Emesis

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 14-R-0035

2. Number 470 of animals used in this study.

3. Species (common name) guinea pigs of animals used in this study.

4. Explain the procedure producing pain and/or distress.
The challenge of vaccinated animals with unattenuated toxins of tetanus, diphtheria and pertussin to prove that vaccinations are effective. The challenge procedure necessarily results in the death of a positive control and higher dose groups. The use of other agents during this critical period of assessments might alter animal responses, thereby obscuring the true end-point, and in turn, might falsely affect the final determination of vaccine potency. The criteria for the tests are requirements of the U.S. Food and Drug Administration for establishing the safety and efficacy of vaccines prior to release for therapeutic use in humans.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

Federally-mandated Testing

6. What, if any, federal regulations require this procedure? Cite the Agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency FDA CFR 21 CFR 620.1-620.4

- °FR Doc. 79-11451
- °FDA Docket No. 78D-0438
- °Minimum requirements, Division of Biologics Standards, NIH, 8/25/53; 4th Revisions 3/1/47 and 12/15/52; Amendment No. 1, 11/28/56

ADDENDUM #2

The animals listed in Column E were utilized for safety or potency testing of this firm's products as specified in the following 9 CFR sections:

9 CFR	113.109(c)	<u>Clostridium botulinum</u>
	113.204(b)	Mink enteritis virus
	113.302(c)*	Mink distemper virus
	113.38	Guinea pig safety test

In addition, animal vaccination/challenge testing was performed for the following studies:

1. b4
2. Testing of b4 , as specified in 9 CFR or our Outline for Production and approved by APHIS-CVB.
3. Testing of b4 , as required by the 9 CFR and approved by APHIS-CVB.

Agencies that regulate the testing of biologics generally insist that these tests run their course without interference. In some instances, such as distemper efficacy tests, the symptoms may become protracted. In these cases, we do administer a euthanasia solution at an appropriate state to reduce pain and distress.

b6, b7c

* 113.302(c) applies to mink and ferrets

This report is required by law (7 USC 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2143.

See reverse side for additional information.

TOTAL P. 07

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

-
1. Registration Number: 21-R-0114
 2. Number 1 of animals used in this study.
 3. Species (common name) Rhesus of animals used in this study.
 4. Explain the procedure producing pain and/or distress.

SEE ATTACHED

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

SEE ATTACHED

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency _____ CFR _____

21R0114

Weill Medical College of Cornell University
"Column E Explanations"

#4. The animals will be placed on a water restriction regime during the on-control periods of research. Although a detailed method of evaluation has been successfully employed since the inception of the protocol, it is possible that the animals could become dehydrated during the on-control periods. If the animal becomes dehydrated, the animal will be treated appropriately with rehydrating fluids. In addition, visual behavior experiments require that the monkey be restrained for several hours a day in a primate chair. The restraint could be distressful. Precautions are taken to prevent the animal from experiencing pain or distress while in the primate chair. Excessive grimacing, vocalizations or squirming may be signs that the animal is uncomfortable in the chair. If these behaviors are displayed during a recording session, the experiment for that day will be terminated and the animal returned to its cage.

#5. Pain or distress will be relieved by rehydrating the monkey in the case of dehydration and removal from the primate chair if the animal displays signs of discomfort or pain. Although appropriate action would be taken immediately, the animals were placed in category E because both of these situations may occur.

This report is required by law (7 USC 2142). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

ATTACHMENT 2

Page 1 of 1

Attachment to USDA Annual Report 1999
Explanation regarding animals listed in category E

Rabbits:	75	Skin Irritation/Toxicity Studies
	<u>200</u>	Ocular Irritation Studies
	275	Total rabbits in category E
Guinea Pigs:	7	Antigenicity Studies
	<u>941</u>	Dermal Sensitization and Maximization Studies
	948	Total guinea pigs in category E

b4

All of the above listed animals in category E were used on studies going to regulatory agencies regarding product safety or toxicity testing. These tests are required of our clients by state, federal, or other regulatory agencies. During the conduct of these studies, it was imperative that the animals receive no drugs that might interfere with the testing in order to assure study validity. These activities and procedures of conduct for the studies were reviewed and approved by the Institutional Animal Care and Use committee.

The regulations that may require these procedures include 21 CFR 58 (FDA), 40 CFR 160 (EPA-FIFRA), 40 CFR 792 (EPA-TSCA), ENV/MC/CHEM(98)17, Revised 1997, Issued 1998 (OECD), 59 NohSan No. 3850 (Japanese MAFF), and Ordinance 21 (Japanese MOHW).

Summary of Exceptions
Annual Report of Research Facility
G. D. Searle & CO., Inc.
4901 Searle Parkway, Skokie, IL 60077
USDA Registration Number: 33-R-0028

Fourteen dogs were exempted from exercise for ten days while being used on an IACUC-approved protocol permitting dosing of radioactive compounds that were subsequently excreted in the urine and feces. This exemption was granted to prevent contamination of animal room, research and husbandry personnel as well as exposing animals of different dosing groups to metabolic waste from other dose group animals.

Explanation for Column E (Annual Report of Research Facility)

The guinea pigs counted in this column were used in quality control tests to evaluate protection provided by a human vaccine against diphtheria and tetanus. The tests are routinely carried out according to FDA requirements for batch release of product intended for human use.

We perform this test according to our Protocol No. 1200. A copy of page 1 of this protocol is attached for information.

A literature search has been carried out to evaluate alternative procedures. The results of this search are available as an appendix to Protocol No. 1200. One result of the search has been to justify reduction in the number of animals used per assay.

Our Protocol No. 1200 is available for inspection and has been inspected by USDA inspectors on several visits to our facility.

This report is required by law (7 USC 2143). Failure to report according to the regulations can result in an order to cease and desist and to be subject to penalties as provided for in Section 2150.

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 42-R-0020
2. Number of animals used in this study.
3. Species (common name) hamster of animals used in this study.
4. Explain the procedure producing pain and/or distress.

Refer to number 6 below.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency USDA, APHIS, VS, CVB CFR

Optional Column E Explanation Form

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 42-R-0020
2. Number 2 of animals used in this study.
3. Species (common name) guinea pig of animals used in this study.
4. Explain the procedure producing pain and/or distress.

The procedure is potency test for Clostridium tetani antitoxin in which 2 control animals are ~~lethal dose~~^{not} given a lethal dose of Tetanus toxin. By definition, the control animals must be down and unable to rise or stand under their own power.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see question 6 below)

This is a required potency release test - see 9CFR 113.451

6. What, if any, federal regulations require this procedure? Cite the agency, the Code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Unrelieved Pain/Distress

NOV 29 1999
21 R0051

Title: Evaluation of Toxicity of New Imaging Agents
Protocol Number: PMY22074N
Approved Animal Use: Rabbits and Rats

Description of procedures: Rabbits

Per test article

Acute study: control group 4 animals
experimental groups - 3 groups @ different dose concentrations, 4 animals
per group = 12 animals

Subchronic study: control group = 7 animals
experimental group = 7 animals

Animals are injected IV with a test article or control article in the same vehicle.
maximum dose used is 2 ml/kg.

Acute study - animals are dosed individually with a single injection, dose calculated from their weight and according to group in an up/down fashion. This allows for a lower concentration to be administered if the higher concentration is toxic. This approach focuses in on the LD50 with the minimum use of animals.

Subchronic study - animals are dosed at approximately 1,000X the expected human dose of the drug. The animals are dosed Monday-Friday for two weeks. Each animal is dosed individually with a single daily injection calculated from the animal's weight.

The acute study allows for at least a week of conditioning before any injections are given. The animal weights are recorded during this time to monitor weight gain before injections. The single injection is given on day 0. Only one group of four animals is injected at a time, which allows for the adjustment, in an up/down fashion, of the dosage of the next group. The animals are monitored for acute signs of toxicity, with all observations recorded. Animal weights are monitored for 2 weeks to note any weight loss or food consumption changes. Clinical observations are made regarding behavioral changes or tissue changes at the injection site. Fourteen days after injection, the surviving animals are euthanized. (Actual study time = 14 days).

The subchronic study allows for a week of conditioning before any injections are given. Animal weights are recorded. Injections are given Monday-Friday for two weeks. Animal weights are monitored for two weeks during the injection period and for the following two weeks to note any weight loss or food consumption changes. Clinical observations are made regarding behavioral changes or tissue changes at injection site. two after final injection animals are euthanized. (Actual study time = 25 days).

NOV 29 1999

21R0051

Justification

Toxicity studies are requirements for FDA approval for the administration of newly developed drugs in humans. The purpose of the studies is to elicit potential toxic effects of candidate drugs which will ultimately be used in humans. Both production of toxicity and relative reversibility of those signs need to be demonstrated and observed. If adverse events occur it is necessary not to interfere as recovery is often possible. This is critical in the testing of new drugs to estimate the permanence or reversibility of adverse effects. In seriously affected animals, death usually occurs within minutes of dosing, thus limiting the period of discomfort. Two species have been selected (rabbits and rats), since they usually respond at different dose levels and can elicit different effects than the other and allows for the maximum information with a minimum number of animals used. This provides added assurance of picking up possible drug side effects which could result upon the administration of the drug in humans.

Forty-four (44) dogs were involved in testing procedures that involved pain and/or distress.

Twenty-four (24) dogs were used for testing (b)(4)

(b)(4)
These tests were done in accordance with 9CFR (b)(4) the procedures in the Immunogenicity Study approved by USDA/APHIS on June 6, 1989, and the Immunogenicity Study, (b)(4) submitted to the USDA/APHIS on August 28, 1998. The (b)(4) host animal vaccination-challenge was performed at the recommendation of (b)(4) Veterinarian - Veterinary Biologics, Biotechnology, Biologics, and Environmental Protection) in a letter dated January 22, 1996.

Twenty (20) dogs were used in studies for the production of an (b)(4) vaccine, (b)(4) (b)(4) These studies included the development of a challenge model and maintenance of seed stock.

Any pain and/or distress experienced by the dog was kept to a minimum limited only by the definition of the testing.

A total of fifty-five (55) cats were involved in testing procedures that involved pain and/or distress.

Eight (8) cats were used for testing done in accordance with 9 CFR MAFF for the *in vivo* potency testing of

b4

Vaccines. These tests were and SOP 21-430-00 filed with products.

Forty-seven (47) cats were used in the production of a letter from

b4

Pre-immunogenicity Studies for As stated in the - Veterinary Biologics, b4

Biotechnology, Biologics, and Environmental Protection) dated January 13, 1994, b4
b7c at the National Veterinary Services Laboratories (NVSL) has a virulent challenge virus that produces severe disease upon a single exposure...we strongly recommend that data be presented for our review from a single challenge with your firm's challenge virus and/or the NVSL challenge along with any other challenge models you propose. This data should be submitted for comment to our office before initiating any efficacy study." Although a certain degree of pain and/or distress was necessary for the expression of symptomatology, it was kept to a minimum and the option of euthanasia was used, when deemed appropriate, by the attending staff veterinarian.

Any pain and/or distress experienced by the cat was kept to a minimum limited only by the definition of the testing.
