

Summary of Studies Supporting USDA Product Licensure

| Establishment Name | Zoetis Inc. |
|---|--|
| USDA Vet Biologics Establishment Number | 190 |
| Product Code | 4560.24 |
| True Name | Bovine Rhinotracheitis-Virus Diarrhea-Parainfluenza 3 Vaccine, Modified Live Virus, Campylobacter Fetus- Leptospira Canicola-Grippotyphosa-Hardjo- Icterohaemorrhagiae-Pomona Bacterin |
| Tradename(s) / Distributor or Subsidiary (if different from manufacturer) | PregGuard GOLD FP 10 - No distributor specified |
| Date of Compilation Summary | February 16, 2023 |

Disclaimer: Do not use the following studies to compare one product to another. Slight differences in study design and execution can render the comparisons meaningless.

190 4560.24 Page 1 of 53

| Study Type | Efficacy | | | | | | |
|-------------------------------|---|--|--|--|--|--|--|
| Pertaining to | Bovine Viral Diarrhea Virus, type 1 (BVDV1) | | | | | | |
| Study Purpose | Demonstrate efficacious against persistently infected calves caused by BVDV1 | | | | | | |
| Product Administration | | | | | | | |
| Study Animals | | | | | | | |
| Challenge Description | Non-cytopathic BVDV1 strain 816317(b) | | | | | | |
| Interval observed after | | | | | | | |
| challenge | | | | | | | |
| Results | Study data were evaluated by USDA-APHIS prior to product licensure and met regulatory standards for acceptance at the time of submission. No data are published because this study was submitted to USDA-APHIS prior to January 1, 2007, and APHIS only requires publication of data submitted after that date. | | | | | | |
| USDA Approval Date | 02/06/2002 | | | | | | |

| | BVDV1 |
| Product Administration | |
| Study Animals | |
| Challenge Description | Non-cytopathic BVDV1b NY-1 |
| Interval observed after | |
| challenge | |
| Results | Study data were evaluated by USDA-APHIS prior to product licensure and met regulatory standards for acceptance at the time of submission. No data are published because this study was submitted to USDA-APHIS prior to January 1, 2007, and APHIS only requires publication of data submitted after that date. |
| USDA Approval Date | 06/27/2005 |

190 4560.24 Page 4 of 53

| Study Type | Efficacy |
|-----------------------------------|--|
| Pertaining to | Bovine Virus Diarrhea (BVD) Type 1 |
| Study Purpose | To demonstrate fetal protection against persistent infection of calves |
| Product Administration | One dose administered intramuscularly (IM) 35 days prior to breeding to heifers |
| Study Animals | 20 IM vaccinated, and 10 control heifers, 13–17 months of age, seronegative to BVD1 and BVD2 (serum neutralizing antibody titers < 2) and negative for BVD persistent infection (ear notch immunohistochemistry). |
| Challenge Description | BVD1b (non-cytopathic) seeder calf challenge 124-138 days post vaccination |
| Interval observed after challenge | Dams were observed daily up to 83 days after challenge. Fetuses were assessed for persistent infection on or after 150 days of gestation |
| Results | Fetuses were considered persistently infected if the they were seropositive for BVD (serum neutralizing antibody titers ≥ 3) and/or tissues examined (fetal thymus, spleen, liver, lung, kidney, ear notch samples) were positive for BVD antigen (immunohistochemistry, virus isolation, and/or ELISA). Aborted fetuses were considered persistently infected. Number of BVD persistently infected calves: Controls: 10/10 Vaccinates (IM): 3/20 |
| USDA Approval Date | 03/07/2019 |

⁰⁼ Normal animal: no clinical signs. 1= Nonspecific clinical signs: clinical signs are not specific for acute BVDV infection. Clinical signs may include nasal discharge, abnormal respiration and mild lethargy. 2= Acute BVDV clinical disease: Clinical signs are moderate in degree and specific for acute BVDV infection. Clinical signs may include nasal discharge, abnormal respiration, lethargy, gauntness, ocular discharge, hypersalivation, diarrhea, dehydration, lameness and/or reluctance to move.

190 4560.24 Page 20 of 53

| Study Type | Efficacy |
|-------------------------------|--|
| Pertaining to | Herpesvirus, bovine (IBR) |
| Study Purpose | Demonstrate efficacy against respiratory disease caused by |
| - | infectious bovine rhinotracheitis |
| Product Administration | One dose administered intramuscularly (IM) |
| Study Animals | 20 IM vaccinates and 10 control calves, 6–8 months of age and |
| - | seronegative to IBR (serum neutralizing antibody titer < 1:2). |
| | The study was conducted per 9 CFR 113.310. |
| Challenge Description | IBR virus administered on day 35 |
| Interval observed after | Animals were observed daily for 14 days |
| challenge | |
| Results | Animals were considered to have IBR disease if a clinical sign |
| | was observed/detected on at least one day post-challenge to |
| | include depression, nasal discharge, rectal temperature, or |
| | increased respiratory effort. |
| | |
| | Number of animals affected (IBR disease): |
| | Controls: 10/10 (100%) |
| | IM vaccinates: 4/20 (20%) |
| | |
| | |
| | |

| Study Type | Efficacy |
|-------------------------------|---|
| Pertaining to | Herpesvirus, bovine [Infectious Bovine Rhinotracheitis (IBR)] |
| Study Purpose | Demonstrate efficacy against respiratory disease caused by IBR |
| Product Administration | |
| Study Animals | Bovine |
| Challenge Description | |
| Interval observed after | |
| challenge | |
| Results | Study data were evaluated by USDA-APHIS prior to product licensure and met regulatory standards for acceptance at the time of submission. No data are published because this study was submitted to USDA-APHIS prior to January 1, 2007, and APHIS only requires publication of data submitted after that date. |
| USDA Approval Date | 01/08/2001 |

| Study Type | Efficacy |
|-------------------------------|--|
| Pertaining to | Leptospira interrogans serovar pomona (L. pomona) |
| Study Purpose | Demonstration of efficacy against leptospirosis caused by <i>L</i> . |
| , I | Pomona |
| Product Administration | One dose |
| Study Animals | 15 Calves; 10 vaccinates and 5 controls. All animals were |
| | seronegative for Leptospira grippotyphosa, hardjo, pomona. |
| Challenge Description | Animals were challenged 5 weeks following vaccination. |
| Interval observed after | Animals were observed for 8 days post challenge. Body |
| challenge | temperatures and blood samples were collected daily. |
| Results | Leptospira Isolation Results in Blood: |
| | Controls: 5/5 (100%) positive |
| | Vaccinates: 0/10 (0%) positive |
| | |
| | Temperature Results: |
| | Controls: 5/5 (100%) positive |
| | Vaccinates: 0/10 (0%) positive |
| | |
| | |
