National Bovine Brucellosis and Tuberculosis Updates

Q4 (July- September 2023) Report
Fiscal Year 2023

U.S. Department of Agriculture - Animal and Plant Health Inspection Service
Veterinary Services
Strategy and Policy - Ruminant Health Center
Cattle Health Center
Table of Contents

**Brucellosis** *(B. abortus)*
- Affected herds map and updates
- National slaughter surveillance samples

**Tuberculosis** *(M. bovis)*
- Affected herds map and updates
- Bovine TB cases found through routine slaughter
- TB terms and definitions
Brucellosis (*B. abortus*)

FY23 Q4 (July-Sept. 2023) Updates
Affected herds are mapped to the center of their county.
Brucellosis Affected Herds Under Quarantine Q4 (July- Sept.2023)

Brucellosis Affected Herds Under Quarantine Q4 (July-Sept. 2023)

• **WY 23A** → Identified through routine slaughter surveillance
  - First WHT completed June 2023 and revealed 7 reactors with 6 out of 7 being culture positive
  - Second WHT completed August 2023 and revealed 1 reactor
  - Herd elected to depopulate remaining intact cattle
  - Herd is outside of the DSA and the epidemiologic investigation is ongoing

• **ID 23A** → Identified through market testing
  - Reactor found through routine market testing was culture positive September 2023
  - Traced to a herd in the DSA and whole herd test is scheduled for Fall 2023
• The orange line represents our annual 350,000 surveillance sample target to detect disease with 95% confidence at a 0.001 percent or higher prevalence.
Tuberculosis *(M. bovis)*

FY23 Q4 (July-Sept.) Updates
Affected herds are mapped to the center of their county.

* These herds are under the same ownership
TB Affected Herds Under Quarantine Q4 (July-Sept. 2023)

- **TX 19A**: Removal test (11th) completed July 2023
  - Cultures pending
- **NM 22B**: still conducting WHTs of herds within complex
  - Confirmed July 2022
  - Test-and-Remove Model completed by CEAH
    - Removal test (5th) Sept. 2023
    - Removal test (6th) planned for Dec. 2023
TB Affected Herds Under Quarantine Q4 (July-Sept. 2023)

- TX 22A ➔ Still conducting WHTs of herds within complex
  - Confirmed July 2022
  - Test-and-Remove Model completed by CEAH
  - Epidemiologically linked to NM 22B
  - Removal test (5th) Sept. 2023
  - Removal test (6th) planned for Dec. 2023

Tuberculosis (*M. bovis*)

Terms and Definitions
Designation of Herds as “Quarantined”

• Affected herds are considered “quarantined” due to a formal quarantine order of the entire herd or informal hold order for subgroups of exposed animals.

• Herds under quarantine due to tracing investigations are generally excluded from this report due to the temporary nature of their restrictions.

• Quarantined herds are removed from this report once the quarantine or hold order is removed, typically after verification testing.
TB Test-and-Removal Protocol – VS Memo 552.47

• Consist of 3 stages:
  1) Removal Testing
  2) Verification Testing
  3) Assurance Testing

• To release a herd from quarantine:
  • Two consecutive removal tests must be completed without evidence of M.bovis infection.
  • 2nd removal test must achieve a 95% or greater confidence level the herd is TB-free.
  • Verification test must be conducted and achieve a confidence level of 95% or greater that the herd is TB-free.
Methods of Detection of TB-Affected Herds

• **Area surveillance**: Surveillance in a defined area such as counties in or bordering the modified accredited zone in Michigan.

• **Assurance test**: Herds identified during the assurance testing phase of a test and remove herd plan.

• **Epi investigation**: Herds identified as part of epidemiologic investigations associated with TB-affected animals or TB-affected herds.

• **Movement test**: Herds identified through testing of animals for routine movements, e.g., export and interstate commerce.

• **Slaughter trace**: Herds identified as the source of animals with suspicious lesions during routine slaughter surveillance. Also called “6-35 traces”
Definitions and Acronyms

• **6-35 Trace**: Tracing of the source of a suspected or confirmed case of TB that was identified during slaughter surveillance and reported on a VS 6-35 form; known otherwise as a “slaughter trace.”

• **DSA**: Designated Surveillance Area

• **IFG**: Interferon gamma

• **M. bovis**: *Mycobacterium bovis*, known as bovine or zoonotic tuberculosis

• **NGL**: No gross lesions on postmortem examination

• **NVSL**: National Veterinary Services Laboratories

• **PCR**: Polymerase Chain Reaction; A molecular biology method of assessing for presence of segments of generic material, i.e., DNA and RNA

• **WGS**: Whole Genome Sequencing of TB bacterial DNA; used to assess relatedness among TB bacterial strains
Definitions and Acronyms

• **WHT**: Whole herd test
• **Q Released**: Quarantine released
