			ample referred to in points II.4.5.1, I	1.4.5.2 and/or II.4.5.3 and until the end					
		of the collection period;							

# Certificate model EQUI-SEM-B-ENTRY

II.4.4. underwent the following tests, which meet at least the requirements of the relevant Chapter of the Manual	
Diagnostic Tests and Vaccines for Terrestrial Animals of the OIE, carried out in a laboratory which	
recognised by the competent authority and has the tests referred to hereinafter included in its accreditati	on
equivalent to that provided for in Article 12 of Regulation (EC) No 882/2004 <sup>(7)</sup> , as follows:	
<sup>(8)</sup> [II.4.4.1. for equine infectious anaemia (EIA), an agar-gel immuno-diffusion test (AGID or Coggins test) or	an
enzyme-linked immunosorbent assay (ELISA) for equine infectious anaemia with a negative result;	]
II.4.4.2. for equine viral arteritis (EVA),	
<sup>(5)</sup> either [II.4.4.2.1. a serum neutralisation test with a negative result at a serum dilution of one in four;]	
<sup>(5)</sup> and/or [II.4.4.2.2. a virus isolation test, polymerase chain reaction (PCR) or real-time PCR with a negati	ve
result on an aliquot of the entire semen of the donor stallion;]	
II.4.4.3. for contagious equine metritis (CEM), an agent identification test carried out on three specime	ens
(swabs) taken from the donor stallion on two occasions with an interval of not less than 7 days at lea	ast
from the penile sheath (prepuce), the urethra and the fossa glandis;	
The samples were in no case taken earlier than 7 days (systemic treatment) or 21 days (local treatment	nt)
after antimicrobial treatment of the donor stallion and were placed in transport medium with activat	
charcoal, such as Amies medium, before dispatch to the laboratory where they were subjected with	
negative result to a test for:	
<sup>(5)</sup> either [II.4.4.3.1. the isolation of <i>Taylorella equigenitalis</i> after cultivation under microaerophilic condition	ns
for a period of at least 7 days, set up within 24 hours after taking the specimens from t	
donor animal, or 48 hours where the specimens are kept cool during transport;]	
<sup>(5)</sup> and/or [II.4.4.3.2. the detection of the genome of Taylorella equigenitalis by PCR or real-time PCR, carri	ed
out within 48 hours after taking the specimens from the donor animal;]	
II.4.5. were subjected with the results specified in point II.4.4 in each case to at least one of the test programm	ies
detailed respectively in points 1.6(a), (b) and (c) of Chapter II of Annex D to Directive 92/65/EEC as follow	
<sup>(9)</sup> [II.4.5.1. The donor stallion was continuously resident on the semen collection centre for a period of at lea	
30 days prior to the date of the first collection and during the period of collection of the sem	
described in Part I, and no equidae on the semen collection centre came during that time into dire	
contact with equidae of lower health status than the donor stallion.	
The tests described in point II.4.4 were carried out on samples taken <sup>(6)</sup> from the donor stallion	at
least once a year at the beginning of the breeding season or prior to the first collection of sem	
intended for imports into the Union of fresh, chilled or frozen semen and not less than 14 da	
following the date of the commencement of the residence period of at least 30 days prior to the fi	
semen collection.]	
<sup>(9)</sup> [II.4.5.2. The donor stallion was resident on the semen collection centre for a period of at least 30 days pri-	ior
to the date of the first collection and during the period of collection of the semen described in Part	
but left the semen collection centre under the responsibility of the centre veterinarian for a continuo	
period of less than 14 days, and/or other equidae on the semen collection centre came into dire	
contact with equidae of a lower health status.	
The tests described in point II.4.4 were carried out on samples taken <sup>(6)</sup> from the donor stallion	at
least once a year at the beginning of the breeding season or prior to the date of the first collection	
semen intended for imports into the Union of fresh, chilled or frozen semen and not less than 14 da	
following the date of the commencement of the residence period of at least 30 days prior to the fi	
semen collection,	
and during the period of collection of the semen intended for imports into the Union of fresh, chilled	or
frozen semen the donor stallion was subjected to the tests described in point II.4.4, as follows:	
(a) for equine infectious anaemia, one of the tests described in point II.4.4.1 was last carried of	out
on a sample of blood taken <sup>(6)</sup> not more than 90 days prior to the collection of the sem	en
described in Part I;	
(b) for equine viral arteritis, one of the tests described	
<sup>(5)</sup> either [in point II.4.4.2 was last carried out on a sample taken <sup>(6)</sup> not more than 30 days prior to t	he
date of the collection of the semen described In Part I;]	
<sup>(5)</sup> or [in point II.4.4.2.2 was carried out on an aliquot of the entire semen of the donor stallion tak	en
<sup>(6)</sup> not more than 6 months prior to the date of the collection of the semen described in Par	τI
and a blood sample taken <sup>(6)</sup> from the donor stallion during the 6 months period reacted w	ith
a positive result in a serum neutralisation test for equine viral arteritis at a serum dilution	
more than one in four;]	
(c) for contagious equine metritis, the test described in point II.4.4.3 was last carried out on thr	ee
specimens (swabs) taken <sup>(6)</sup> not more than 60 days prior to the date of the collection of sem	
described in Part I	
<sup>(5)</sup> <i>either</i> [on two occasions;]	
 <sup>(5)</sup> or [on a single occasion and subjected to a PCR or real-time PCR.]]

### Certificate model EOUI-SEM-B-ENTRY

<sup>(9)</sup> [II.4.5.3. The donor stallion does not meet the conditions set out in points 1.6(a) and (b) of Chapter II of Annex D to Directive 92/65/EEC and the semen is collected for imports into the Union of frozen semen. The tests described in points II.4.4.1, II.4.4.2 and II.4.4.3 were carried out on samples taken <sup>(6)</sup> from the donor stallion at least once a year at the beginning of the breeding season,

the tests described in points II.4.4.1 and II.4.4.3 were carried out on samples taken <sup>(6)</sup> from the donor stallion during the storage period of the semen of a minimum period of 30 days from the date of the collection of the semen and before the semen is removed from the semen collection centre, not less than 14 days and not more than 90 days after the collection of the semen described in Part I.

<sup>(5)</sup> either [the tests for equine viral arteritis described in point II.4.4.2 were carried out on samples taken <sup>(6)</sup> during the storage period of the semen of a minimum period of 30 days from the date of the collection of the semen and before the semen is removed from the semen collection centre or used, not less than 14 days and not more than 90 days after the date of the collection of the semen described in Part I.]

 $^{(5)}or$ [the non-shedder state of a donor stallion seropositive for equine viral arteritis was confirmed by virus isolation test, PCR or real-time PCR carried out with a negative result on samples of an aliquot of the entire semen of the donor stallion taken <sup>(6)</sup> twice a year at an interval of at least 4 months and the donor stallion has reacted with a positive result at a serum dilution of at least one in four in a serum neutralisation test for equine viral arteritis.]] underwent the testing provided for in points II.3.2<sup>(5)</sup> and II.4.5 on samples taken on the following dates:

11.4.0. under weht die testing provided for in points 11.5.2 $\bigcirc$ and 11.4.5 on samples taken on the following dates.

<sup>(5)</sup> *either*[II.5. No antibiotics were added to the semen;]

 $^{(5)} or$ [II.5. The following antibiotic or combination of antibiotics was added to produce a concentration in the final diluted semen of not less than <sup>(10)</sup>:

.....

..... 

The semen described in Part I was: II.6.

- II.6.1. collected, processed, stored and transported under conditions which comply with the requirements of Chapters II(I)(1) and III(I) of Annex D to Directive 92/65/EEC;
- II.6.2. sent to the place of loading in a sealed container in accordance with point 1.4 of Chapter III(I) of Annex D to Directive 92/65/EEC and bearing the number indicated in box I.19.

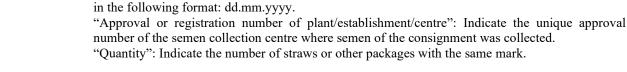

### Notes

This animal health certificate is intended for the entry into the Union of semen of equine animals, including when the Union is not the final destination of the semen.

In accordance with the Agreement on the withdrawal of the United Kingdom of Great Britain and Northern Ireland from the European Union and the European Atomic Energy Community, and in particular Article 5(4) of the Protocol on Ireland/Northern Ireland in conjunction with Annex 2 to that Protocol, references to the Union in this animal health certificate include the United Kingdom in respect of Northern Ireland.

This animal health certificate shall be completed in accordance with the notes for the completion of certificates provided for in Chapter 4 of Annex I to Commission Implementing Regulation (EU) 2020/2235.

Part I:	
Box reference I.11:	"Place of dispatch" shall correspond to the semen collection centre of the semen origin.
Box reference I.12:	"Place of destination": Indicate the address and unique registration or approval number of the establishment of destination of the consignment of semen.
	6
Box reference I.19:	Seal number shall be indicated.
Box reference I.24:	Total number of packages shall correspond to the number of containers.
Box reference I.27:	"Type": Indicate semen.
	Identification number": Indicate the identification number of each donor animal.
	"Identification mark": Indicate the mark on the straw or other packages where semen of the
	consignment is placed.
	"Date of collection/production": Indicate the date on which semen of the consignment was collected

## Part II:

Guidance for the completion of the table in point II.4.6

Abbreviations:

VS Vesicular stomatitis (VS) testing if required in accordance with point II.3.2

EIA-1 Equine infectious anaemia (EIA) testing first occasion

EIA-2 EIA testing second occasion

EVA-B1 Equine viral arteritis (EVA) testing on blood sample first occasion

EVA-B2 EVA testing on blood sample second occasion

EVA-S1 EVA testing on semen sample first occasion

EVA-S2 EVA testing on semen sample second occasion

CEM-11 Contagious equine metritis (CEM) testing first occasion first sample

CEM-12 CEM testing first occasion second sample taken 7 days after CEM-11

CEM-21 CEM testing second occasion first sample

CEM-22 CEM testing second occasion second sample taken 7 days after CEM-21

Instructions:

For each semen identified in column A of the table and indicated in box I.27, the test programme (points II.4.5.1, II.4.5.2 and/or II.4.5.3) shall be specified in column B of the table, and columns C and D of the table shall be completed with the dates required.

The dates when samples were taken for laboratory testing prior to the first collection of the semen described in Part I as required by points II.4.5.1, II.4.5.2 and II.4.5.3, shall be entered in the upper line of columns 5 to 9 of the table, this being the boxes marked with EIA-1, EVA-B1 or EVA-S1 and CEM-11 and CEM-12 in the example below.

The dates when samples were taken for repeat laboratory testing as required in accordance with point II.4.5.2 or II.4.5.3 shall be entered in the lower line of columns 5 to 9 of the table, this being the boxes EIA-2, EVA-B2 or EVA-S2 and CEM-21 and CEM-22 in the example below.

<sup>(1)</sup> Entry into the Union of equine semen is authorised from a third country or territory listed in column 1 of the table in Part 1 of Annex XII to Commission Implementing Regulation (EU) 2021/404 provided that the semen was collected in the zone detailed in column 2 of the table in Part 1 of that Annex from a donor stallion of the category of equine animals indicated in column 3 of the table in Part 1 of that Annex.

<sup>(2)</sup> Only semen collection centres listed in accordance with Article 17(3), point (b), of Directive 92/65/EEC on the Commission website: <u>https://ec.europa.eu/food/animals/semen/equine\_en</u>.

- (3) Council Directive 92/65/EEC of 13 July 1992 laying down animal health requirements governing trade in and imports into the Community of animals, semen, ova and embryos not subject to animal health requirements laid down in specific Community rules referred to in Annex A (I) to Directive 90/425/EEC (OJ L 268, 14.9.1992, p. 54).
- <sup>(4)</sup> Council Directive 2009/156/EC of 30 November 2009 on animal health conditions governing the movement and importation from third countries of equidae (OJ L 192, 23.7.2010, p. 1).

<sup>(5)</sup> Delete if not applicable.

<sup>(6)</sup> Insert date in table in point II.4.6 (follow guidance in Part II of the Notes).

(7) Regulation (EC) No 882/2004 of the European Parliament and of the Council of 29 April 2004 on official controls performed to ensure the verification of compliance with feed and food law, animal health and animal welfare rules (OJ L 165, 30.4.2004, p. 1).

<sup>(8)</sup> The agar gel immunodiffusion test (AGID or Coggins test) or the ELISA for equine infectious anaemia are not required for donor equine animals which continuously resided in Iceland since birth, provided that Iceland remained officially free of equine infectious anaemia and no equine animals and their semen, ova and embryos were introduced into Iceland from outside prior to and during the period the semen was collected.

<sup>(9)</sup> Cross out the programmes that do not apply to the consignment.

<sup>(10)</sup> Insert names and concentrations.
