

Guidelines for Preparation of Certificates for Export of Animal-Origin Products to GB [Great Britain (England, Wales, and Scotland), Channel Islands, and Isle of Man]: Materials Not Intended for Human Consumption

The guidance contains APHIS' best understanding of the proper formatting. APHIS does not confirm prior to endorsement that the majority of the information in Part I of the certificates is completed as required by relevant Border Control Post (BCP) in GB. **Prior to shipment from the U.S. facility, the exporter should always ensure that they have required certificate endorsed by APHIS (with a date on or before the date of shipment), and have their importer confirm with the specific BCP through which the consignment will enter GB that the certificate is completed in an acceptable fashion for the specific consignment.**

The certificate must be dated by APHIS prior to the shipment of products from the Facility Listed in Section I.11 of the certificate.

Special note regarding “intermediate products”:

Some of contents of this document do apply to the “Declaration for the import of intermediate products to be used for the manufacture of medicinal products, veterinary medicinal products, medical devices for medical and veterinary purposes, active implantable medical devices, in vitro diagnostics medical devices for medical and veterinary purposes, laboratory reagents and cosmetic products [GBHC144X]” which is not signed by any entity in the United States (it is signed by the UK importer).

Requirement for capitalization:

The text that is utilized to “fill out” the certificate must be all capitalized (all letters in all words).

Part I: Details of Dispatched Consignment

I.1 Enter full name, address, and telephone number of consignor (entity in the U.S. exporting the product). This entity is not necessarily the facility from which the consignment ships from the United States.

I.2 The exporter should leave this box blank- the endorsing APHIS Office will insert a certificate number prior to endorsement on each side of each page of the certificate.

I.2.a Leave lined-out.

I.3 Enter “APHIS-VS”. (This text is pre-entered on most GB IREGS certificates on the IREGS.)

I.4 Enter VS APHIS Office endorsing certificate, “VS-XX”, where XX is the State in which the endorsing office is located. (For example, enter “VS-VA” if the certificate is going to be endorsed by the VS APHIS Office in Virginia.)

I.5 Consignee/Importer

- Consignments to GB: Enter full name, address, and telephone number of consignee (entity receiving the product in GB).
- Consignments transiting GB: Enter full name, address, and telephone number of consignee (entity receiving the product after it has transited GB). The postal code is only required if it is part of the address of the consignee (some countries do not yet have postal codes as part of addresses).

The certificate may not be revised just to amend this section: If the information in Section I.5 changes after the certificate is endorsed, the operator responsible for the consignment in GB must notify the BCP of the change. However, the certificate may not be “amended” (re-issued) if this is the only change. No documentation from APHIS should be issued regarding changes in this information. No alterations may be made to the certificate after endorsement by the APHIS Office.

I.6 Operator responsible for the consignment

- Consignments to GB: Enter a single diagonal line. (This line is pre-entered on most GB IREGS certificates.)
- Consignments transiting GB: Enter full name, address, telephone number, and postal code of person taking responsibility for the consignment in GB. This is the person who makes the declarations related to the shipment to the BCP.

I.7 This text is pre-entered on most GB IREGS certificates:

- Country of origin: USA
- ISO: US

I.8 Draw a single diagonal line through the box. (This line is pre-entered on most GB IREGS certificates.) (There are some exceptions for some poultry commodities, but in these cases the section is pre-filled out on the IREGS certificates.)

I.9

- Consignments to GB: This text is pre-entered on most GB IREGS certificates
 - Country of destination: UNITED KINGDOM
 - ISO: GB

- Consignments transiting GB: Enter the name and 2 letter ISO code of the destination country of the consignment [For EU countries: Austria AT; Belgium BE; Bulgaria BG; Cyprus CY; Czech Republic CZ; Denmark DK; Estonia EE; Finland FI; France FR; Germany DE; Greece GR; Hungary HU; Ireland IE; Italy IT; Latvia LV; Lithuania LT; Luxembourg LU; Malta MT; Netherlands NL; Poland PL; Portugal PT; Romania RO; Slovakia SK, Slovenia SL, Spain ES; Sweden SE].

I.10 Draw a single diagonal line through the box. (This line is pre-entered on most GB IREGS certificates.)

I.11 Enter the following information for the APHIS-listed facility from which the consignment is shipped to GB: Establishment name, APHIS Reference Number, and address.

Please note the APHIS reference number must appear exactly as it is in APHIS' system. This number is available from the facility's local endorsing APHIS Office . A zero ("0") is not the same as the letter "O". Consignments may be rejected if consignments are received with an "O" noted on the certificate where a zero "0" is actually in the APHIS reference number (which is notified to GB authorities after a facility is listed by APHIS). The same applies to other inconsistencies like a letter "I" where it should be a digit "1", or vice versa.

Please remember that all APHIS reference numbers related to product exports to GB follow the following format only:

LL-LLV-#### where:

- L is always a letter
- # is always a numeral
- V is usually a zero, but in some cases may be letter, e.g. C , **but may never be a letter "O"**.

Note: On the GB certificates equivalent to the following EU certificates, the facility listed in section I.11 must be the same as the facility listed in section I.28: 3F (unprocessed animal byproducts for the manufacture of pet food), 5A (fresh or chilled hides), and 8 (animal by-products for purposes outside the feed chain). For those certificates, the same facility must be listed in section I.11 and section I.28.

I.12

- Consignments to GB: Enter a single diagonal line. (This line is pre-entered on most GB IREGS certificates.)
- Consignments transiting GB (without storage in GB): Enter a single diagonal line.
- Consignments stored in GB while transiting GB: Enter the name, address, postal code, and approval number (assigned by GB authorities) of the warehouse or the ship supplier where the consignment will be stored while in GB. The GB

individual listed in block I.6 should be able to obtain this number for the exporter. APHIS will not confirm these numbers prior to endorsement. Exporters should have the person listed in block I.6 confirm whether the “Custom warehouse” box should be selected.

I.13 Enter port of exit from the U.S. (place of loading onto the ship or plane).

I.14 Enter date of expected shipment departure from the U.S. This should be the date the shipment will depart from the port of exit, but may be the date the consignment departs the warehouse for the port of exit. **This date may not be before the date of the certificate.**

The certificate may not be revised just to amend this section: If the information in Section I.14 changes after the certificate is endorsed, the operator responsible for the consignment in GB must notify the BCP of the change. However, the certificate may not be “amended” (re-issued) if this is the only change. No documentation from APHIS should be issued regarding changes in this information. No alterations may be made to the certificate after endorsement by the APHIS Office.

I.15 Select the method utilized to transport the shipment from the U.S. to GB. Only one method may be selected.

- Identification:
 - For consignments shipped via sea, list the name of the ship (vessel);
 - For consignments shipped via air, list the flight number.

BCP’s in GB are believed to require the identification of the specific ship or flight number in this section. If the exporter chooses to not include this information, then they must line-out this section (enter dashes in the relevant space) and submit a “shipping at your own risk” agreement to the APHIS Office. While APHIS would not refuse to endorse a certificate simply because this section is lined-out, the “shipping at your own risk” agreement is required because the consignment may be rejected if this section is not completed with the vessel name or flight number.

- “Documentation references”/“Documentary references”: APHIS believes that some BCPs may be willing to accept certificates with this space lined out, however, we recommend the number of one of the following commercial documents instead be placed into this space (the referenced document must be available to the BCP but does not become part of the certificate and is not verified or endorsed by APHIS):

- Airway bill number
- Bill of lading number

The certificate may not be revised just to amend this section: If the information in Section I.15 changes after the certificate is endorsed, the operator responsible for the consignment in GB must notify the BCP of the change. However, the certificate may not be “amended” (re-issued) if this is the only change. No documentation from APHIS should be issued regarding changes in this information. No alterations may be made to the certificate after endorsement by the APHIS Office.

I.16 Enter the name of the BCP that is the port of first arrival to GB. Alternatively, the BCP code assigned by IPAFFS may be utilized. The exporter must work with their importer to relevant BCP name or code is utilized. APHIS does not verify this information.

The certificate may not be revised just to amend this section: If the information in Section I.16 changes after the certificate is endorsed, the operator responsible for the consignment in GB must notify the BCP of the change. However, the certificate may not be “amended” (re-issued) if this is the only change. No documentation from APHIS should be issued regarding changes in this information. No alterations may be made to the certificate after endorsement by the APHIS Office.

I.17 If a CITES document is required for the consignment, enter the CITES document number here. Enter a single diagonal line through the box if no CITES document is required. (Some certificates have this line pre-printed- in these cases no CITES document is believed to be required.) For more information on when CITES documents are required, and how to obtain them, exporters should contact the [U.S. Fish & Wildlife Service](#). Exporters should have their importers confirm with the BCP prior to shipment whether or not a CITES document is required.

I.18 Include a general description of the exported materials, e.g. canned pet food. The information should correspond to the HS code entered in block I.19. The species of origin of the materials may not be included in this section if it is also in section I.28. No “quality” type statements may appear any place on the certificate, not even in this section. No statement indicating product has been processed/treated or tested may appear in any part of section I (they may only appear in Part II [declarations] and only when required on the published certificate).

I.19 Sometimes the HS codes which may be utilized is pre-printed on the certificate on the IREGS, either in section I.19 or in the notes at the end of the certificate. Enter the relevant code if it is not pre-printed in section I.19. The exporter should work with the

importer to confirm that the appropriate code is utilized, and that the BCP will allow the use of the certificate with the code. If a code or codes are pre-printed on the certificate (in section I.19 or in the notes at the bottom of the certificate) and a different code is utilized entered by the exporter in Section I.19, the consignment could be rejected, and the exporter would have to provide a “shipping at your own risk” letter to the endorsing APHIS Office for that office to consider endorsement. Even with such a letter, certificate endorsement would not be possible if the presented certificate is clearly not required by GB for the materials intended for export).

I.20 Include both the total Gross Weight AND the total Net Weight of the consignment in **kilograms**:

- Total net weight: the weight of the certified animal byproducts* shipped not including packaging (not even inner most packaging)
- Total gross weight: Weight of the certified animal byproducts* plus packaging but excluding the transport (shipping) container/transport equipment. For example, the weight of cardboard boxes would be included, but the weight of a large metal shipping container would not be.

*certified animal byproducts: Only the weight of the certified materials – those materials included in section I.28 of the certificate may be included. If for instance, non-animal origin materials are also included in the same shipment, they are not covered by the certificate, and therefore do not contribute to the weight listed in section I.20.

If section I.28 of the certificate includes a column for net weight, the total of the weights entered in section I.28 must equal the net weight noted in section I.20.

I.21 Select the appropriate box.

I.22

- For consignments shipped in bulk (e.g. when the only packaging is a shipping container [with or without a liner]) in a single shipping container: Enter dashes through the space.
- For consignments not shipped in bulk: Enter the total number of packages of certified animal byproducts* in the consignment.

*certified animal byproducts: Only include in the number of packages of the certified materials. Only those materials included in section I.28 of the certificate may be included. If for instance, non-animal origin materials are also included in the same shipment, they are not covered by the certificate, and therefore do not contribute to the weight listed in section I.20.

If section I.28 of the certificate includes a column for “number of packages”, the total of the numbers entered in that column in section I.28 must be the number entered into section I.20.

Any number entered into section I.22 must be the number of the packages named in section I.24. E.g. if “XX” is entered into section I.24, the number of “XX” packages of certified animal byproducts* would be entered into section I.22.

I.23 **Generally** the container number is only required for consignments shipped in bulk. Generally, the seal number is only required when the certificate indicates that the materials are in “sealed” containers. However, prior to shipping a consignment accompanied by a certificate without a seal number included in section I.23, exporters should have their importers confirm with the BCP prior to shipment that the consignment will be allowed entry into (or transit through) GB, unless Section I.23 is pre-lined out on the certificate on the GB IREGS. In most cases, if the consignment is shipping parcel post, no seal number would be required.

If a seal number is not included, the space in this section must be filled with dashes (lined-out). Also, in the following cases, if a seal number is not included in section I.23, in addition to filling the relevant space with dashes, the exporter must provide to the endorsing APHIS office a “shipping at your own risk” agreement:

- Materials shipped in commercial shipping containers; and/or
- Where the certificate declarations indicate that the materials are in “sealed” containers.

I.24 While the EU has specific terminology for different types of packaging, e.g. “bag, paper, multi-wall”, GB does not appear to require the use of this exact terminology. The exporter should work with the importer to confirm that the terminology utilized in this section is acceptable. A reference list of known terms acceptable to the EU for “types of packaging” is included at the end of this document, but GB has not verified the terms on the list to their BCPs. While this list includes specific terminology for different types of packaging, e.g. “bag, paper, multi-wall”, GB has not verified the acceptability of these terms.

I.25 Select the appropriate option. In cases where it will not be obvious which option to select, additional guidance may be available on the relevant IREG page regarding which option is appropriate in which cases.

I.26

- Consignments to GB: Enter a single diagonal line. (This line is pre-entered on most GB IREGS certificates.)
- Consignments transiting GB: Select the box (it is normally pre-selected on the IREG version), and enter the name and ISO code of the country of destination from section I.9.

I.27

- Consignments to GB: Select the box. (This is already done on most GB IREGS certificates.)
- Consignments transiting GB: Enter a single diagonal line. (This line is pre-entered on most GB IREGS certificates.) Do not select the box.

I.28 Required information varies depending on the certificate. Most certificates have requirements to list the following 4 items:

1. Species (Scientific name): The exporter should include the names of the species of origin of the materials being exported (this may not include references to humans). Requirements for terminology for “scientific names” vary by certificate. The information included must be consistent with any guidance given in the “notes” section of the particular certificate, plus also the relevant terminology included on the facility’s listing (for the EU) in the APHIS internal system (this terminology will be provided to the facility by their APHIS office when they are listed for the EU). Exporters should have their importers confirm (prior to preparation of certificates) that the terminology on the certificate is acceptable to the importing port.
2. “Approval number of establishments-Manufacturing Plant”: This must be the reference number granted by APHIS to the facility listed for export to the EU under Regulation (EU) 142/2011 (as amended). [Special note for the 4(A) Certificate: For “whole blood” or blood cells, the “Approval number of establishments-Manufacturing Plant” included in section I.28 must be the number of the facility where the source blood was originally collected from the actual equidae animal.] Please see the information [included above in section I.11] regarding the importance of not interchanging digits and numbers.

Note: On the GB certificates equivalent to the following EU certificates, the facility number listed in section I.28 must be the same as the facility number listed in section I.11: 3F (unprocessed animal byproducts for the manufacture of pet food), 5A (fresh or chilled hides), and 8 (animal by-products for purposes outside the feed chain). For those certificates, the same facility must be listed in section I.11 and section I.28.

Special exception for trade samples: Exception: If the “Model health certificate for animal by-products to be used for purposes outside the feed chain or for trade samples” (i.e, the “GBHC098X”) is utilized for trade samples, similar the EU Chapter 8, a U.S. facility number is not utilized. Instead, “Approval number of establishments/Manufacturing plant” must be changed to “Approval number of establishments/~~Manufacturing plant~~ Plant of Destination”, and the number inserted into that column must be the number of the importing facility in GB (or in the case of consignments transiting GB to the EU, the importing facility in the EU). This number should correspond with the number listed in the “special permission” granted by the Ministry of Animal Health in the importing country.

3. Batch number: This is the lot number(s) of actual materials in consignment.

4. Various other columns are included in section I.28 of the certificates. In all cases, the information inserted may not be contradicted by the information inserted in other sections of the certificate. Exporters should discuss any questions with their local APHIS office the certificate is to be submitted to.

Any unused spaces in Section I.28 must be lined out with a single diagonal line. If the exporter cannot do this prior to submission of the certificate, they should include a request with their submission to APHIS for the APHIS office to add the line at the time of endorsement.

Part II: Certification

II.a The exporter should leave this blank- the APHIS Office will insert the certificate number from I.2 prior to endorsement.

II.b Enter a single diagonal line. (This line is pre-entered on most GB IREG certificates.)

The exporter should leave **the rest of Part II** blank with the following exceptions.

1. When preparing the certificate the exporter must include all text from the certificate on the IREGS. The exporter may not electronically or otherwise delete these items. Where there is an “and/or” statement, the exporter must line-out the selections that are not appropriate. Line-outs for common scenarios are demonstrated on the pertinent IREGS. If they are not, they should be pre-lined out consistent with the relevant EU IREG. Prior to endorsement, the VS APHIS Office will confirm that the line-outs were verified by inspection of the production facility, and are consistent with the relevant lined-out IREG version. The exporter should make every effort to prepare the certificate with the appropriate line-outs prior to printing. If line-outs are added prior to printing (if the lines on the actual printed certificate match the actual print/font/color of the certificate text), the endorsing APHIS office may not initial or emboss the line-out. If the line-outs do not match the print (including print/font/color) of the certificate, **each individual line-out must be initialed and endorsed by the APHIS signatory.** This scenario could result in delays of certificate endorsement, and should be avoided. The exporter should consult with the APHIS Office endorsing the certificate for more information on which options should be lined-out.
2. Some certificates have blanks for the addition of certain addition information such as processing parameters. In these cases, the exporter should enter the missing information into the blanks, and the APHIS Office will confirm prior to endorsement.
3. When submitting the certificate to the APHIS Office, if the certificate is an amendment or replacement for a previous certificate, the exporter must identify the situation, the number and date of the previous certificate, a summary of why the reissue is needed (e.g. what exactly has changed), and the original hard copy

of the certificate being replaced or amended (or a summary of where the hard copy is and why it cannot be returned).

Additional steps:

1. Major items that the APHIS Office will check prior to preparing the certificate for endorsement include, but are not limited to, that:
 - a. Any U.S. facility listed in the certificate in section I.11 and I.28 have the required current listing with APHIS;
 - b. The certificate is identical to the version from the GB IREGS and properly lined-out for the certified commodities consistent with the facility's listing, the products certified, and the relevant IREGS guidance;
 - c. A single diagonal line is drawn through any unused space on the certificate [APHIS Offices will print the certificates duplexed on VS Security Paper prior to endorsement. If the number of pages in the certificate is an "odd" number, a page should be added with a single diagonal line so that no side of the VS Security Paper is printed blank]; and
 - d. Any required laboratory test reports are included for each lot/batch listed on the certificate (required testing is any testing referenced in the certifications). The laboratory reports do not become part of the certificate and should not accompany the shipment. APHIS should retain copies of the report with the office copy of the certificate.
2. The certificate is not transferred to any letterhead.
3. Each side of each page of the certificate is numbered as "Page X of Y".
4. The APHIS Office will add the following to the certificate prior to endorsement. Exporters should check the certificate when they receive it from the endorsing office to ensure the below has been added:
 - a. Certificate number on each side of each page
 - b. Full name of endorsing APHIS veterinarian (in "Official veterinarian" box)
 - c. Date (in "Official veterinarian" box)
 - d. Official title of endorsing APHIS veterinarian (in "Official veterinarian" box)
 - e. Full signature of APHIS veterinarian: Each side of each page must be signed (not just initialed) by the endorsing APHIS veterinarian (in "Official veterinarian" box)
 - f. Colorless raised embossment: Each side of each page must be embossed over the signature; and
 - g. In the case of certificates where there are line-outs where the "color/print/font" of the line out does not match the color/print/font of the text being lined out, the endorsing APHIS veterinarian has initialed (and embossed over the initialing) each line-out.

No additional pages may be included with the certificate except in the case of consignments transiting GB, where the additional pages is the certificate required

by the country of final destination and have been appropriately prepared and verified consistent with the relevant APHIS policies.

Please contact the VS APHIS Office serving the APHIS in which you are located with any additional questions.

Please note it is the responsibility of the exporter to have their importer confirm prior to shipment with the BCP that all requirements have been met. This includes (but is not limited to) ensuring: that the certificate that has been endorsed is acceptable to the BCP, that the consignee has all necessary approvals from their government to receive the consignment for the intended purpose, that all labeling requirements necessary for release of the shipment have been met, and that all listing requirements (in the GB system as well as the APHIS system) are current.

Regarding the following list of “**EU Packaging Types**”: This list is included as a potential reference for terms for Section I.24. However, while this list includes specific terminology for different types of packaging, e.g. “bag, paper, multi-wall”, GB has not verified the acceptability of these terms.

EU Packaging Types

Name
Aerosol
Ampoule, non-protected
