January 2025	40	0	26620

There were 8 surveillance inspections conducted at 7 different sites for a total of 40 fish sampled this month. Samples are targeted to moribund and fresh mortalities. The water temperatures continued to decrease in response to colder air temperatures. Routine harvest continued. One site remained classified as Category 2b, and is conducting biweekly surveillance. All other sites with fish in the water remained Category 1 and were scheduled for monthly sampling.
