Veterinary Health Certificate for Export of Swine Semen from the United States of America to the Republic of Kenya

Veterinary Authority:

UNITED STATES DEPARTMENT OF AGRICULTURE

Date Of Issue:

Certificate Number:

Certification Statements:

1. The semen originates from the United States, which is free of Foot-and-Mouth Disease (FMD), swine vesicular disease, and classical swine fever (CSF), all without vaccination.
2. The semen originates from semen collection centers approved annually by a USDA, APHIS, Veterinary Services Veterinarian, and is under control of a USDA Accredited Veterinarian.
3. The donor animals showed no clinical signs of Aujeszky's disease (AD, or pseudorabies) on the day of semen collection, and:
 - a. Originate from premises where there have been no cases of AD for the six months prior to the donor animals entering the semen collection center;
 - b. Were kept for at least 60 days prior to the collection of semen for export at the semen collection center that is free of AD, and where all donor boars are regularly subjected to testing with negative results for AD every four months;
 - c. Were test negative for AD within four months of collection of semen for export.
4. The donor animals were kept in an African Swine Fever (ASF) free country or compartment since birth, or for at least 40 days prior to semen collection, and showed no clinical signs of ASF on the day of semen collection, and for the 30 days following collection.
5. The donors showed no clinical signs of porcine brucellosis on the day of semen collection, and:
 - a. The donor animals were not vaccinated against infection with brucella, and:
 - b. The donor animals EITHER:
 - i. Were kept in a semen collection center complying with OIE Terrestrial Animal Health Code Chapter 4.6, and the semen was collected and processed in accordance with Chapter 4.7; OR
 - ii. Were kept in a herd free from infection with brucellosis, and tested every six (6) months for infection with brucella with negative results, and the semen was collected, processed and stored in accordance with Articles 4.6.3 to 4.6.5 and Articles 4.7.5 to 4.7.7 of the Code.
6. The donors showed no clinical signs of transmissible gastroenteritis (TGE) on the day of semen collection, and:
 - a. Were kept for at least 60 days prior to the collection of semen for export at the semen collection center that has been free of clinical cases of TGE for the 12 months prior to collection;
 - b. Were test negative for TGE at least 14 days after collection of semen for export.
7. The semen is collected, processed and stored in conformity with the provisions of Chapters 4.6 and 4.7 of the OIE Terrestrial Animal Health Code.
8. Each straw of semen is sealed and code marked in line with the international standards of the International Committee for Animal Recording (ICAR), to include the identification of the donor animal, identification of the collection center, and the date of collection.
9. The semen straws must be packaged hygienically in shipping containers that are either new or were cleaned and disinfected.
