Veterinary Health Certificate for Export of Swine Semen from the United States of America to Malaysia

**Veterinary Authority**

UNITED STATES DEPARTMENT OF AGRICULTURE

**Date Of Issue**

**Certificate Number**

-----  
**Certification Statements:**

I, the undersigned USDA Accredited Veterinarian, certify to the following statements:

1. The United States is free from Foot and Mouth Disease (FMD), African Swine Fever (ASF), and Classical Swine Fever (CSF) during the 12 months preceding the date of export.
2. The donor boar or boars come from farms or artificial insemination centers free from Aujeszky Disease (AD) and Transmissible Gastroenteritis (TGE) and free from infection or Brucella in swine during the 12 months preceding the date of export.
3. For the frozen semen, the donor animals were subjected to a diagnostic test for TGE with negative results at least 14 days after collection.
4. Regarding Porcine Reproductive and Respiratory Syndrome (PRRS):
  - [O] The United States is free from Porcine Reproductive and Respiratory Syndrome (PRRS) during the 12 months preceding the date of export.
  - [O] a. The donor males have not been vaccinated against PRRS;
    - b. Were kept, since birth or for at least three months prior to entry into the pre-entry isolation facility, in an establishment in which no pigs have been vaccinated against PRRS and no infection with PRRSV was detected within that period;
    - c. Showed no clinical sign of PRRS on the day of entry into the pre-entry isolation facility and were subjected to a serological test with negative results on samples collected on the same day;
    - d. Have been kept in an artificial insemination center where, at least every month, serum samples from a statistically representative number of all donor males are subjected, to an appropriate test for infection with PRRSV with negative results. (The sampling scheme should be designed to ensure that all donor males are tested every 12 months and at least once during their stay).
  - [O] a. The donor males have not been vaccinated against PRRS;
    - b. Were kept, since birth or for at least three months prior to entry into the pre-entry isolation facility, in an establishment in which no pigs have been vaccinated against PRRS and no infection with PRRSV was detected within that period;
    - c. Showed no clinical sign of PRRS on the day of entry into the pre-entry isolation facility and were subjected to a serological test with negative results on samples collected on the same day;
    - d. Have been kept in an artificial insemination center where all donor males were subjected to serological and virological examinations for infection with PRRSV, with negative results, on serum samples taken on the day of collection.

Certification Statements:

- 5. The semen is derived from an artificial insemination center which is under the supervision of the veterinary authority of the exporting country.
- 6. The semen in the consignment is derived from a boar or boars which had been kept in the artificial insemination center for at least four (4) months immediately prior to the date of collection.
- 7. The boar was kept in an artificial insemination center complying with Chapter 4.6 of the OIE Terrestrial Animal Health Code.
- 8. The donor boar came from a herd which is free from Foot and Mouth Disease (FMD), Aujeszky Disease (AD), African Swine Fever (ASF), Classical Swine Fever (CSF), Porcine Reproductive and Respiratory Syndrome (PRRS), Transmissible Gastroenteritis (TGE) and free from infection of Brucella in swine.
- 9. Prior to entry into the semen collection facilities of the artificial insemination center, boars were kept in a pre-entry isolation for at least 28 days. The animals were subjected to diagnostic test according to OIE Standards at a minimum 21 days after entering the pre-entry isolation facility, with negative results for Brucellosis, Aujeszky's Disease, TGE, and PRRS.
- 10. All animals kept at the artificial insemination center are tested at least annually with negative results for Brucellosis, Aujeszky's Disease, TGE, and PRRS.
- 11. The donor animals were not vaccinated against infection with Brucella.
- 12. The donor boars showed no clinical sign of disease on the day of collection of the semen.
- 13. The semen was collected and processed in accordance with Chapter 4.6 and 4.7 of the OIE Terrestrial Animal Health Code.
- 14. The semen to be exported was treated with a mixture of antibiotics, with a bactericidal activity at least equivalent to that of the following mixtures in each ml of frozen semen: gentamicin (250 µg), tylosin (50 µg), lincomycin-spectinomycin (150/300 µg); penicillin (500 IU), streptomycin (500 µg), lincomycin-spectinomycin (150/300 µg); or amikacin (75 µg), divekacin (25 µg).
- 15. All ampules/straws are permanently marked with the identification of donor and the date of semen collection.
