*\*If additional data is necessary, an enclosed list must contain the above data with signature and seal of the official veterinarian and be inseparably attached to the health certificate.*

### **VIII. CERTIFICATION STATEMENTS:**

1. In the United States Tularemia, myxomatosis, rabbit hemorrhagic disease and rabies are notifiable diseases as reported to WOAHA.
2. Requirements are based on size of consignment:  
(Note: only the section that apply need be contained in the final health certificate)
  - A. The quantity of the rabbit(s) is five or more in the consignment:
    1. The raising place or establishment shall be disinfected regularly by the owner. Sanitary and raising records shall be kept.
    2. The equipment in the raising place or establishment shall be examined regularly by the owner, and the owner shall confirm the raising place or establishment is able to prohibit animal invasion.
    3. The rabbit(s) have been kept in the US since birth. If the rabbit(s) are not born in the US, the rabbit(s) shall be raised in the US for more than ninety days prior to the shipment.
    4. The veterinarian registered or licensed by the competent authority of exporting country shall be responsible for disease diagnosis and reporting the notifiable diseases.
    5. Rabies, rabbit hemorrhagic disease and myxomatosis have not occurred in raising place or establishment in the previous year.
    6. The rabbit(s) shall be subjected to at least fifteen days pre-export quarantine in quarantine premises which have been approved by the USDA accredited veterinarian, from \_\_\_\_\_ (date) to \_\_\_\_\_ (date), and were examined and found to be in a healthy condition without any clinical signs of contagious diseases.
    7. The rabbit(s) shall be treated for internal and external parasites not less than five days and not more than fifteen days prior to shipment. Medication and dose used \_\_\_\_\_ and \_\_\_\_\_ (date).
    8. The rabbit(s) have been inspected within three (3) days of issuance and found in good health condition and fit for shipment. The rabbit(s) also have been free from clinical evidence of any communicable disease and infestation of external parasites.
  - B. The quantity of the rabbit(s) is four or less in the consignment:
    1. The rabbit(s) have been kept in the US since birth. If the rabbit(s) are not born in the US, the rabbit(s) shall be raised in the US for more than ninety days prior to the shipment.

- 2. Rabies, rabbit hemorrhagic disease and myxomatosis have not occurred in raising place in the previous year.
- 3. The rabbit(s) shall be subjected to at least fifteen days pre-export quarantine in raising place or in quarantine premises which have been approved by the USDA accredited veterinarian, from \_\_\_\_\_ (date) to \_\_\_\_\_ (date), and were examined and found to be in a healthy condition without any clinical signs of contagious diseases.
- 4. The rabbit(s) shall be treated for internal and external parasites not less than five days and not more than fifteen days prior to shipment. Medication and dose used \_\_\_\_\_ and \_\_\_\_\_ (date).
- 5. The rabbit(s) have been inspected within three (3) days of issuance and found in good health condition and fit for shipment. The rabbit(s) also have been free from clinical evidence of any communicable disease and infestation of external parasites.

**X. OTHER INFORMATION:**

- 1. The rabbit(s) shall be transported with clean containers and vehicles disinfected with disinfectant approved by competent authority of exporting country.
- 2. No feed, fodder, bedding or other animals shall be supplementary loaded during the transportation.
- 3. The transportation and transition shall be pursuant to Terrestrial Animal Health Code of the World Organization for Animal Health (WOAH) and regulations of International Air Transport Association (IATA).
