I. EXECUTIVE SUMMARY

This three-year plan outlines how Texas Animal Health Commission (TAHC) proposes to continue to develop and advance animal disease traceability under the federal ADT program.

The continued collaboration and cooperative relationship between TAHC and USDA/APHIS/VS are vital to the success of this program. To help support the health and sustainability of the extensive animal agriculture industry in Texas, continued funding and support from USDA is needed to maintain successful management of the animal disease traceability program in Texas.

TAHC’s projected approach and anticipated timeline include the following elements:

- **April 2024**
  - FY2024 cooperative agreement
  - Continue LID/PIN assignments
  - Continue tag distribution process
  - Continue data collection and reporting
  - Continued integration of legacy data
  - Outreach and marketing efforts
  - Continue development of a system for electronic capture of CVI data
  - Promote the use of electronic data capture and electronic records
  - Compliance and enforcement actions
  - Continue to provide a limited supply of RFID readers to accredited veterinarians
  - Projected Cost: $1,975,000

- **April 2025**
  - FY2025 cooperative agreement
  - Continue LID/PIN assignments
  - Continue tag distribution process
  - Continue to provide a limited supply of RFID readers to accredited veterinarians
  - Continue data collection and reporting
  - Continued integration of legacy data
  - Outreach and marketing efforts
  - Enhancement of an electronic data capture system of CVI data
  - Implementation of transition to electronic identification
  - Compliance and enforcement actions
  - Projected Cost: $2,050,000

- **April 2026**
  - FY2026 cooperative agreement
  - Continue LID/PIN assignments
  - Continue tag distribution process
  - Continue data collection and reporting
  - Continued integration of legacy data
- Outreach and marketing efforts
- Enhancement of an electronic data capture system of CVI data
- Implementation of advancement activities to support a standardized electronic system for traceability data and uniform official ID
- Compliance and enforcement actions
- Continue to provide a limited supply of RFID readers to accredited veterinarians
- Projected Cost: $2,125,000

II. CURRENT TRACEABILITY SITUATION

2.1 Who are we?

TAHC was founded by the Texas Legislature in 1893 and is charged with protecting Texas’ livestock and poultry “from all contagious or infectious diseases of a malignant character.” Today, TAHC remains true to this charge while evolving with the times to protect the health and marketability of all Texas livestock and poultry.

TAHC has legislative authority to make and enforce regulations to prevent, control, and eradicate specific infectious animal diseases which endanger livestock and poultry. TAHC regulations are made and adopted by 13 governor-appointed commissioners who represent the general public, various livestock industries, and professions. The commissioners serve staggered six-year terms and meet as needed to study the regulatory needs of the agency, review public comments on proposed regulation changes, and adopt new rules when necessary.

TAHC’s headquarters are in Austin with six region offices strategically located across the state so the staff can work more effectively with ranchers, livestock markets and slaughter plant personnel, and other livestock industry representatives across Texas’ 254 counties.

Texas has unique risks associated with its size and extensive borders. In addition to the four US states that border Texas, the Texas-Mexico border spans approximately 1,248 miles. Texas also has multiple land ports, seaports, and international airports.

In addition to TAHC’s animal health specialists, who have expertise in the Texas animal agriculture industry, to help develop the most efficient animal disease traceability program, TAHC uses various animal disease traceability working groups, which meet on an as-needed basis. These groups bring together representatives and experts from various industries to provide species specific valuable guidance and on the continued development and implementation of traceability efforts in Texas.
Where are we now?

Texas has successfully completed four previous ADT Road Maps. The first Texas ADT Road Map plans established the initial development and implementation of a basic traceability system and rules during FY2012, FY2013, and FY2014. Building on the previous successes the Texas ADT Road Map 2 for FY2015, FY2016, and FY2017, continued implementation of traceability activities and began development of a system for electronic capture of ICVI data. For FY2018, FY2019, and FY2020, the Texas ADT Road Map 3 focused on improving the availability and retrieval of traceability information, as well as the evaluation of visual versus electronic traceability devices and documents. With the success of the previous four ADT Road maps FY2021, FY2022, and FY2023 concentrated on the continued transition to electronic traceability devices and encourage paperless reporting.

TAHC continues to work with the animal disease traceability cattle working group and other industries to find workable solutions and to help develop short and long-term plans for the future of animal identification and disease traceability in Texas.

Premises Registration Systems

TAHC has continued voluntary premises registration to support the administration of location identifiers that adhere to the federal standards. ADT staff manages the various premises registration systems, including issuing premises identification numbers (PIN)s, location identification numbers (LID)s, and scrapie flock identification numbers. Each number is nationally unique and recognized.

A national premises identification number (PIN) is a unique number, permanently assigned to a physical address where agricultural animals are located. Texas utilizes the USDA-APHIS provided Premise Management System (PM) to obtain a PIN from the federal allocator. A PIN consists of seven alphanumeric characters, beginning with two leading zeros. To obtain a PIN, producers may contact TAHC’s ADT department. The owner’s contact and premises information is entered, maintained, and stored electronically in PM and hard copy files on-site.

Texas has a state system and process for issuing a location identification number (LID). A LID is assigned to an owner’s contact and operation information, which are stored in a state administered CoreOne database (TexCore). Only the LID number itself is reported to the federal repository system as a valid number. All LIDs start with the state postal abbreviation (TX) followed by six random alphanumeric characters, which makes the LIDs nationally unique. In most cases, a LID may be used in lieu of a PIN. To obtain a LID, producers may contact their local TAHC region office or
ADT department.

Additionally, ADT staff administers the Scrapie program for sheep and goats. They collect producer and flock information over the telephone, assign a Scrapie flock identification number, enter the information into SCS-SCR, and maintain a scanned file copy of the registration/order form.

**Administration of Official Identification Devices**

The proper administration of official identification devices and reporting is key for capturing accurate information needed to achieve successful animal disease traceability. The most commonly used forms of official ID are USDA approved Animal Identification Number (AIN) “840” series Radio Frequency Identification tags (RFID) and National Uniform Eartagging System (NUES) identification metal eartags. Brucellosis calfhood vaccination tags, Swine PIN tags, Scrapie tags, and breed registration tattoos/brands (uniquely identifying the animal and accompanied by the breed registration paperwork) are also acceptable as official ID. A complete list of acceptable official identification devices/methods is posted on TAHC’s website and updated regularly. Producers are encouraged to contact their veterinarian or TAHC to determine which method of tagging will be best for their operation.

**AIN - RFID tags**

AIN device manufacturers and managers may distribute approved AIN devices to producers and are responsible for entering tag distribution records into the Animal Identification Management System (AIMS). All recipients of AIN devices must first have a LID or PIN and provide that number to the distributor for proper reporting. ADT staff are available to register premises, process address exceptions, and issue the allocated PINs and/or LIDs. Additionally, TAHC region office staff can register premises and issue LIDs. Producers with a valid PIN or LID are encouraged to purchase official identification from an USDA approved tagging manufacturer or supplier. TAHC will provide or direct producers to the complete list of approved AIN devices and tag manufacturers’ information maintained on the USDA traceability website.

TAHC will continue to promote and support the use of electronic identification. By the end of FY2019, TAHC successfully transitioned to only using electronic identification for regulatory and disease program work by all TAHC field personnel. TAHC may use ADT cooperative agreement funds to purchase additional AIN RFID tags and RFID device applicators. In addition, TAHC may supply AIN RFID tags to producers with a valid PIN or LID, if supplies are available and only on a case-by-case basis. TAHC’s ADT department is responsible for overseeing the management of all official ID devices distributed and/or applied by the agency. TAHC region office staff will collect all official ID allocation...
records from field staff, enter the data into TexCore, and report official ID distributions to TAHC’s ADT department. Tag distribution records for official AIN devices are entered and maintained in AIMS by ADT staff.

After RFID tags are applied to the animals, the RFID devices can be scanned and read by standard ISO compliant readers. Electronic readers are available for purchase by animal health agencies, markets, operations, and producers from the manufacturers. TAHC field personnel regularly use handheld readers, wands, and stationary readers paired with handheld PDAs and laptops to electronically capture the animal identification numbers and upload the data into the appropriate systems using MIMS; while conducting testing, disease response, trace work, and assisting with livestock identification. Funds will be used to purchase electronic readers with accessories for TAHC field personnel and accredited vets, as part of our technology equipment refresh and to increase infrastructure.

Accredited Veterinarians and Cattle Producers
In order to expand the use of RFID devices, USDA will offer free AIN-840 low frequency RFID white and orange OCV tags to states for accredited veterinarians and cattle producers for use on replacement breeding cattle. The complimentary RFID tags are used as an alternative to silver metal “Brite” tags and orange metal Official Calfhood Vaccination (OCV) tags. Though the metal clip tags have served a valuable purpose in disease control and eradication programs, RFID devices provide state animal health officials and the cattle industries increased ability to accurately and quickly trace animals exposed to or infected with potentially devastating diseases before they can do substantial damage to the U.S. livestock and consumer markets.

Texas accredited veterinarians and cattle producers that are interested in receiving official RFID tags at no-cost may submit their requests to TAHC’s ADT department. TAHC will fill the requests for these devices from the supply given by USDA. The tags will be distributed to field offices, accredited vets, producers, or operations that are eligible to receive these official id devices at no-cost. These no-cost official id devices will be shipped directly from TAHC supply. The shipping costs for devices redistributed from TAHC will be paid for with cooperative funds, any overages will be covered by state funding.

Accredited Veterinarians are required to maintain records and report all official ID devices distributed and/or applied, using one of the following methods: record and submit identification data on an official animal health record (test record, vaccination chart, or ICVI) for data entry into
TexCore; vets who are AIN Device Managers may enter AIN distribution records directly into AIMS; or report official ID distribution records to TAHC’s ADT department for data entry into AIMS.

Livestock Marketing Facilities
TAHC recommends that producers/buyers contact their local livestock market/auction barn to determine current requirements and available options for livestock identification. Some animals may be required to be officially identified prior to or after purchase to comply with the ADT, disease program, or regulatory requirements.

Livestock marketing facilities are not required to report tag distribution records for livestock tagged at the market. As part of a separate TAHC rule, livestock marketing facilities are required to keep certain dealer records for a minimum of five years and to make the records available for inspection by TAHC representatives. TAHC Market Inspectors report all tag sequence allocations to region offices, which are then entered into TexCore. Dealer records are to include records of individual animal identification numbers, plus consignor and consignee contact information for animals sold.

Approved Tagging Sites
All facilities such as livestock markets receiving certain classes of livestock without official identification must be designated as an approved tagging site by agreement. The purpose of this agreement is to maintain integrity and control of application of official eartags at an approved tagging site, where livestock may be officially identified on behalf of the owner or person in possession, care or control of the animals when they are brought to the facility. Animals requiring official identification may be moved to these sites without prior official identification, provided the site can maintain the individual identity of animals until they are officially identified.

Approved Tagging Sites can order RFID tags in increments of 100 by contacting TAHC’s ADT department. RFID tags will be used to officially identify all animals in accordance with 9 CFR 86 and 4 TAC §50.2, including:
• Officially identify animals required to be identified before commingling with animals from different premises or use a backtag or other method to accurately maintain the animal's identity until the official ear tag is applied. The official identification can then be correlated to the person responsible for shipping the animal.
• Only apply official eartags to animals not already officially identified, (except as provided in 9 CFR 86.4(c)); and
• Do not remove official identification devices unless authorized by an animal health official.

Approved Tagging Sites must submit records of tag application within
30 days if requested by TAHC personnel. The report must include, at a minimum: The name, physical address, city, state and zip code of the owner or person responsible for animals tagged; the official identification numbers of the tags applied associated with the owner or person responsible for the animals; and the date the official identification eartags were applied.

Approved Tagging Sites must maintain records of official identification eartags received and applied for a minimum of five years. Also, maintain an accurate inventory of official eartags and application records in a secure place accessible only to tag applicator personnel. Any lost or stolen tags must be immediately reported to Texas animal health officials.

Swine PIN tags
Producers requesting Swine PIN tags must first have a premises ID number (PIN), as the PIN is imprinted on the tags. ADT staff will register the premises over the phone and provide the allocated PIN number. The Swine PIN tags are available for purchase from an USDA approved tagging manufacturer or supplier. TAHC will provide or direct producers to the list of official PIN tags for slaughter swine and their approved tag manufacturers’ information maintained on the USDA traceability website.

TAHC will use ADT cooperative agreement funds to purchase Swine PIN tags and applicators for animal disease regulatory work. These tags will be registered to and imprinted with the PIN for TAHC’s central office. These tags are only distributed to TAHC region offices to be used by TAHC field staff when conducting swine testing. The initial tag distributions from the central office to the region offices are entered and maintained in TexCore. When applied to the animal, the tag allocations are reported on the swine test charts and submitted to TAHC region offices for data entry.

Scrapie tags
USDA-APHIS announced nationwide identification and recordkeeping requirements for sheep and goats on March 25, 2019 as part of the National Scrapie Eradication Program. USDA-APHIS believes the final rule will result in a more effective disease eradication program. The rule provides a more flexible approach to disease investigations and affected flock management, and more consistent animal identification and recordkeeping requirements between sheep and goats. Under this rule, all sheep and goats must have official identification (I.D.) when moving off their premises of origin, unless specifically exempt.

Acceptable forms of official identification include plastic or metal Scrapie flock ID tags, Scrapie 840 RFID ear tags, and plastic or metal serial tags. Registered tattoos and 840 electronic implants are accepted.
as official ID with the exception of sheep and goats that are in slaughter channels or moving through a livestock market or buying station.

The national Scrapie Program hotline forwards the phone calls of Texas breeders, dealers, and livestock markets to TAHC’s ADT department. ADT staff will register the flocks/operations for a Scrapie flock identification number or verify their existing Scrapie flock ID number. TAHC will provide the caller with the information on how to purchase the official ID devices. For producers, dealers, and markets eligible to receive free tags, TAHC will place the order into AIMS. Scrapie flock and serial tags ordered through AIMS will be shipped directly to the recipient and the tag allocation entered into AIMS by the tagging manufacturers.

TAHC will order Scrapie serial tags and applicators for the ADT department and region offices. TAHC may supply a very limited amount of these Scrapie serial tags to producers with a valid Scrapie flock ID number, if supplies are available and, on a case-by-case basis. The most common reason for TAHC to issue Scrapie serial tags is for sheep or goats going to a show or out of state within the two weeks, in other words, needed sooner than the time it takes for flock ID tags to be ordered, produced, and shipped. ADT staff will enter these tag allocations into AIMS.

**Animal Health and Movement Records**

TAHC maintains various other traceability data sources by continuing to collect and store identification data required for testing, movement, change of ownership, and other applicable animal health disease programs. These include but are not limited to data collected and/or stored from interstate and intrastate certificates of veterinary inspection (ICVIs), bovine brucellosis and tuberculosis test charts, brucellosis vaccination records, scrapie tag distribution, and interstate permits.

As outlined in the previous Road Maps, TAHC has continued to focus on the electronic data capture, the promotion and transition from paper to electronic documentation. During FY2014, TAHC IT Development Team completed the development of a TAHC eCVI and put a link to a new application on TAHC’s website. The application enables Texas veterinarians to purchase eCVIs online. The Health Certificate webpage on the agency’s website, displays all the ICVI purchasing options (electronic and paper). TAHC’s eCVI online application continues to work as expected and veterinarians are successfully utilizing the tool. TAHC staff is continuing to monitor all CVIs and eCVIs for data quality and compliance. Starting in FY2016, TAHC contracted with Trace First to utilize StateVet.com for the data entry and upload of ICVI data into SCS, for cattle with official identification moving interstate. Additionally, at the end of the FY2016 cooperative year, TAHC Program Records and ADT staff started using document management
software, Square 9, to begin scanning all paper and electronic interstate CVIs, for all species with or without official identification, into an electronically searchable system. The emphasis placed on transitioning from a primarily paper-based system to electronic capture of CVI data has resulted in significant improvements in traceability and completion of trace performance exercises.

During FY2019 and FY2020, TAHC worked with VS and Palantir staff to implement use of DIS-AHER, including establishing access, user training for staff, identification of data sources, verifying compatibility, initiating electronic information sharing of summary data, and pilot testing DIS for FY2020 ADT Cooperative Agreement work plans and quarterly reporting.

ADT data collected in Texas is entered and stored in a mixture of state and USDA maintained standardized animal health systems. Federal systems utilized: AHER for data searches, SCR for Scrapie Flock IDs, EMRS2 for NPTs and Response records. MIMS for electronic data captured in field, Premise Management for Premises IDs, AIMS for AIN and Scrapie official ID distributions. Texcore for issuing LIDs, including StateVet for official ID distribution, regulatory program and movement records. These systems are already connected to AHER and electronically accessible to TAHC and USDA animal health officials. State systems utilized: TAHC Tag Application for NUES tag field distributions and Square9 for electronic document storage.

During FY2021, TAHC implemented our state procured private CoreOne system for Texas, TexCore. TAHC transition from CoreOne-SCS to CoreOne-TexCore as our primary system, including StateVet, for all LIDs, official ID distributions, animal disease programs and movement records. TexCore is aligned with established data and communication interfaces to ensure continued compatibility. TAHC will continue to share the summary data to AHER through the standard connection between the AHER system and TexCore. Additionally, TAHC is available during normal business hours for sharing of data (not included in AHER) with other state & federal Animal Health Officials, law enforcement, and open records requests.

During FY2022, TAHC continued the transition into TexCore. Modifications and updates were done to increase the usability of this system. USDA supplied tags were distributed to producers and accredited veterinarians for use in replacement cattle.

During FY2023, CVI Central was added. CVI Central provides a single web-based portal for managing CVI workflows. It is used for both paper and electronic certificates. TexCore continued to be updated and USDA supplied tag distribution continued.

TAHC is dedicated to data security and the protection of Texas producers’ personal information. Therefore, TAHC staff are required to complete
information systems and data security training annually.

TAHC will continue to monitor and report on the administration of official identification devices, animal health and movement records in our ADT cooperative agreements, quarterly and final accomplishment reports.

The process must be supported and funded by USDA to ensure successful compliance by the regulated industries in an equitable and cost-effective fashion, and to ensure the successful management and enforcement of the same traceability process by the responsible state animal health agencies.

2.3 Strengths and Weaknesses

The Texas Animal Health Commission has a long history of working productively with the animal agriculture industries in Texas, and in finding practical solutions and applying pragmatic regulations. As such, the major strength of TAHC is its existing working relationship with those industries and people who will be affected by traceability regulations. Secondly, TAHC has a well-trained work force with capable field inspectors, a committed ADT team, and in-house database development IT management personnel. TAHC staff are actively working through the best traceability solution for Texas and are equipped to come up with a workable solution in partnership with animal agriculture and other interested partners.

Regarding challenges, TAHC faces a continuing challenge to develop efficient systems to electronically capture and upload searchable traceability data. This includes all records of interstate movement, test charts, as well as data migration from existing federal ID databases and integration of extensive state-level data. Another challenge exists in the need to educate the producers and industries of Texas regarding the new disease traceability approach and ID requirements. Due to Texas’ large variety of livestock producers and management practices, a major obstacle is to get everyone on the same page and agree to one system. Lastly, TAHC is experiencing a number of varied animal health issues which has redirected resources and caused personnel to delay or halt regular job duties (including ADT work) to assist with the responses.

2.4 Opportunities and Threats

Texas has a history of significant animal health issues, whether disease or natural disaster related. Until August 2011, TAHC maintained extensive first point testing ear tag records and drew on these records routinely for disease tracing purposes, and for linkage of cattle to owners in natural disasters or for law enforcement purposes. There is no doubt that Texas and its partners in animal agriculture commerce need an efficient and reliable animal traceability system. Without a traceability system, disease tracing and natural disaster recovery would become much more difficult and, in many cases, unreliable or impossible. Assurance of and linkage of animal ID to cases
involving animal ownership change and movement are made possible by standardized identification and recordation methods.

There are many opportunities to improve and advance our traceability systems in Texas. Emerging new technologies which allow for a variety of easier, faster, and more effective ways to manage electronically identified animals and animal health records throughout all sectors of the livestock industry. Additionally, we have opportunities to increase the acceptance and use of electronic identification devices, whether it is the availability of no-cost low frequency tags to vets, the use of ultra-high frequency devices at markets, or simply beginning to use electronic official ID tags at all the Cattle Fever Tick dipping vats. TAHC is encouraged to hear that some of the most reluctant members of the industry are showing increased interest in the benefits of traceability.

TAHC is the state-level organization for foreign animal disease response, a responsibility that is not directly shared with any other agency or organization. The Governor added TAHC to the State Emergency Management Council in 2001, to the Homeland Security Council in 2005, and the Critical Infrastructure/Key Resources (CI/KR) Committee in 2006. Because of the agency’s expertise in animal health, the chief of the Texas Division of Emergency Management designated TAHC as the state’s lead agency for all animal issues in emergencies. With the largest animal agriculture industries in the nation, Texas needs disease traceability to avoid potentially catastrophic animal and economic loss.

2.5 Inventory of existing infrastructure and suitability assessment

- **Human Resources**
  In fiscal year 2023, TAHC employed five (5) full-time employees in the ADT department: (1) ADT Coordinator, (1) ADT Technical Inspector, and (3) Customer Service Representatives. Cooperative funding help support these positions. The ADT coordinator is responsible for overseeing and coordinating all ADT program activities and projects, in the office and in the field, and serves as a signatory official for the ADT cooperative agreement and quarterly reports. The coordinator also promotes traceability programs across the state at meetings and conferences. The ADT Technical Inspector works with field staff and accredited veterinarians to perform herd testing, research and pilot project management, disease outbreak and trace work, and training on the use of ADT equipment such as wands, PDAs, RFID tags, etc. The customer service representatives register premises, answer incoming phone calls, answer questions about the ADT program, manage tag allocations, perform official ID traces, conduct the daily business within the office, assist in trainings, equipment demonstrations, and support in the field.
Technology and Equipment

TAHC’s Information Technology Services department manages TAHC’s resources for connectivity between the offices and the field and ensures agency access to USDA animal disease traceability and animal health information databases. TAHC maintains all previously purchased hardware, including computers (desktops, laptops, & handhelds), printers, scanners, RFID wand readers, cell phones, and wireless internet access, and software, including, premises location mapping software, such as ArcGIS and Google Earth software. ITS also employs a robust database development team and provides advice on best practices regarding data management.

Animal Health Information Resources

TAHC Program Records department processes all certificates of veterinary inspection and issues and monitors Texas entry permit programs for domestic and exotic animals and fowl entering Texas from other states. Program Records also ensures all traceability data such as animal identifications, owner information, health certificates, vaccination records and test charts are entered into TexCore. In 2023, TAHC began using the application CVI Central, which helps manage CVI workflow and streamlines the transmission of animal health data electronically to improve the processing time for both electronic and paper CVIs. Program Records is also responsible for maintaining records for TAHC’s disease management and eradication activities including, the Cattle Fever Tick Eradication Program, the Waste Food Feeder Registration, and Feral Swine Holding program. And Program Records supports records management for herd status programs including, the Accredited Bovine Tuberculosis Free Herd, the Bovine Brucellosis Certified Free Herd, the Validated Swine Brucellosis Free Herd, the Qualified Pseudorabies Negative Swine Herd programs, the CWD Herd Status Plans for Cervidae, and the Trichomoniasis Free Herd status for cattle.

TAHC Program Records staff calculate the monthly number of animals and ICVIs for interstate movement, and the number of paper vs electronic ICVIs for ADT quarterly reporting. They also send electronic and/or paper copies of ICVIs to the other receiving states within 7 days, as per ADT requirements.

III. AGENCY VISION AND MISSION

3.1 Vision Statement

Through the cooperative efforts of the Texas Animal Health Commission, animal producers, and allied industry groups, the animal population of Texas is healthy and secure.
3.2 Mission Statement

The mission of the Texas Animal Health Commission is:
• to protect the animal industry from, and/or mitigate the effects of domestic, foreign and emerging diseases;
• to increase the marketability of Texas livestock commodities at the state, national, and international level;
• to promote and ensure animal health and productivity;
• to protect human health from animal diseases and conditions that are transmissible to people; and
• to prepare for and respond to emergency situations involving animals by conducting agency business in a responsive, cooperative, and transparent manner.

IV. TRACEABILITY REQUIREMENTS

4.1 Strategic goals

USDA’s Overarching Goals established in 2018:
1. Enhance electronic sharing of data among federal and state animal health officials, veterinarians and industry; including sharing basic ADT data with the federal animal health events repository (AHER);
2. Increase the use electronic ID tags for animals requiring individual identification in order to make the transmission of data more efficient;
3. Enhance the ability to track animals from birth to slaughter through a system that allows tracking data points to be connected; and
4. Elevate the discussion with States and industry to work toward a system where animal health certificates are electronically transmitted from private veterinarians to state animal health officials.

TAHC’s ADT Strategic Goals:
To develop and implement a statewide infrastructure for advancing animal disease traceability in Texas that complies with the federal minimum standards established by United States Department of Agriculture.

To establish traceability systems for species and industries that do not or no longer have compliant systems in place, for example beef cattle and cervidae.

4.2 Programmatic goals (Objectives)

TAHC will work cooperatively with USDA APHIS, to the degree possible, on activities that will support compliance with the aligned federal regulations defined in 9 CFR Part 86 and state regulations 4 Texas Administrative Code Chapter 50. Cooperation and high compliance with traceability regulations are critical to achieve optimum tracing capabilities.
TAHC will follow protocols and achieve assigned quotas, in accordance with USDA provided Guidelines for Administering Traceability Performance Measures document, for the administration and completion of National Priority Traces (NPTs) to maintain eligibility for reimbursements of expenditures. Moreover, TAHC’s goal is to consistently meet or exceed the average time it takes to complete the NPTs with no performance concerns on our performance report.

The proper administration of official identification devices and documents used to help determine interstate movements, in particular Interstate Certificates of Veterinary Inspection (ICVIs), is key for capturing accurate information needed to achieve successful animal disease traceability. TAHC’s goal is to continue to place a priority on activities that will make electronic information more readily available, including activities to support official identification, recordkeeping pertaining to the distribution of official ear tags, promotion of radio frequency identification and electronic interstate movement documentation.

Objectives, to include, but not limited to:

- Increase number of registered premises
- Increase number of animals with official ID
- Increase use of electronic IDs
- Increase use of electronic CVIs

Sharing information quickly and effectively will help USDA APHIS and state animal health agencies respond to animal disease events and make ADT successful. Information systems must be compatible. Therefore, TAHC will continue to administer the required data elements in accordance with data standards defined in the ADT Technical Specification document. While USDA will not fund information system development, data resulting from funded tracing activities will be compatible so it can be shared with other animal health officials.

4.3 Animal Disease Traceability Performance Measures

TAHC, in cooperation with the USDA VS staff, will annually administer National Priority Traces (NPTs) that reflect tracing capabilities based on the defined tracing activities. Compilation of the results across all recipients will enable APHIS to determine current traceability values for the TPMs to document progress made from the national baseline values and subsequent “comparison years” that were established in prior cooperative agreement periods. The trace activity response times will be reported based on the following four preliminary performance standard measures:

1) Time to report to the State/Tribe of official tagging/identifying of an animal in question that has moved interstate.
2) Time for the State/Tribe of first officially tagging/identifying an
animal in question that has moved interstate to provide a record of the official tag distribution.

3) Time to report to the State/Tribe from which an animal in question has moved interstate.

4) Time for the State/Tribe from which an animal in question has moved interstate to provide the location and contact information from which the animal was moved interstate.

ADT personnel are continuing to work closely with USDA VS staff to successfully administer traces for the National Priority Traces (NPTs) and use Emergency Management Response System-2 (EMRS2) for tracking and reporting trace activities.

These performance trace activities measure the time it takes to answer four specific questions regarding the allocation of official identification and/or interstate movement. The start time is when the State is notified of the official identification number, and the end time is when the State finds the information to answer the question posed by the activity. Activities 2, 3, & 4 are the most important to complete. Traces for Activity 1 will be limited to Animal Identification Number (AIN) tags as the official animal number. Completing trace exercises for cattle is the priority. Trace activities for other species may be reported, but they do not count toward the quota for NPTs.

USDA VS personnel will select the appropriate official identification number(s) to trace and initiate the NPT in EMRS2. The system will automatically send an email notice of NPT creation to an ADT group email address. TAHC currently has two ADT staff members with eAuthentication Level 2 access assigned to complete the NPTs in the EMRS2 utility. ADT personnel work together to coordinate the assignment and completion of the NPT activity. ADT staff will conduct extensive searches in traceability electronic databases; such as AHER, TexCore, AIMS, etc. If no clear results are found, they will conduct searches of paper systems and make phone calls to parties involved, if necessary. When the trace is complete, the ADT staff will access EMRS2 to document all steps taken in the Key Actions, enter the trace information found, upload a copy of the record(s), and close out the NPT.

TAHC’s goal is to consistently meet or exceed the average time it takes to complete the NPTs with no performance concerns on our performance report. TAHC progress towards achieving our assigned NPT quota, monitoring elapsed time, and percentage of completion status will be included in the quarterly ADT accomplishment reports.

4.4 Data requirements

• A PIN or LID will be assigned to all Texas producers when they provide
TAHC staff with current and accurate herd owner contact information, including but not limited to: owner’s name, mailing address, and phone number.

- Texas will accept all forms of official ID as outlined by USDA standards. Texas will not accept brands or tattoos as official ID, unless the animal is accompanied with official breed registration documentation.
- TAHC supports the use of official ID tags to identify all adult cattle prior to interstate movement to comply with the federal rule or to be tagged within 7 days for intrastate movement.
- Tags and applicators may be distributed by approved device manufacturers, accredited veterinarians, TAHC personnel, or shipped directly to the producers, depending on available funds.
- TAHC has fully transitioned from using our own online tag allocation reporting application to utilizing Trace First’s TexCore system as our primary tag distribution record keeping system for NUES tags.
- TAHC will continue to use USDA’s AIMS system for AIN distribution record keeping.
- Data will be shared with AHER, as well as other states and tribes on an as-needed basis for animal disease response and control. This would be a continuation of TAHC practice of epidemiologic management of disease trace-ins and trace-outs.

4.5 Information technology plan

- Maintain and continue integration of legacy data into a TexCore database.
- Enhancement/Improvements of Texas’ electronic certificates of veterinary inspection to allow for reporting and tracing of ADT data.
- Funding to host an additional database instance in a well-supported data center that offers server failover capability and routine backups.
- Maintenance funding for datacenter hosting, software licensing, and salaries for up to two dedicated IT specialists.
- Maintenance, upgrade, and replacement of automated data capture equipment, such as computers and handheld devices.
- Continue to pursue improvements of scanning technology to make paper CVIs searchable for tracing.

4.6 Resource requirements

Additional resources needed may include the following:
- Official identification devices
- Tagging pliers
- Electronic device readers
- Additional personnel
- Funding for shipping tags to producers and accredited vets
- IT operations costs
- IT hardware
• Additional space for tag and file storage

4.7 Organizational needs

TAHC has an organizational structure in place that will support animal disease traceability and all aspects of implementation.

4.7.1 Executive support

TAHC is an animal health agency administered by licensed veterinarians. As animal health professionals who handle the realities of animal disease on a daily basis, TAHC’s management advocates implementation of a practicable animal disease traceability program.

4.7.2 Coordination and oversight procedures

The Texas animal disease traceability working groups are species specific and provide valuable guidance and oversight in the continued development and implementation of traceability efforts in Texas. Originally, the working group was comprised of representatives from all various livestock industries and producers. The species-specific working groups were implemented to provide more effective and focused advancement within their industries. The working groups meet on an as-needed basis.

The compatibility with other states, tribes, territories, and USDA is monitored using policy standards, federal minimum standards, common data collection practices, standardized reporting and program evaluation based off performance measures.

The ADT department is responsible for coordination and implementation of the animal disease traceability plan, including coordination of other agency office and field staff. Additional responsibilities and job duties may be assigned by TAHC’s executive director.

4.7.3 Policy

The animal disease traceability program in Texas is governed by the existing mandate in the Texas Agriculture Code, Section 161.056. This policy authorizes TAHC to establish and enforce, by Commission rule, an animal identification program consistent with the Federal program. The rules proposed and adopted by the Commission are legal requirements promulgated by the Commission to carry out their mission to protect animal health in Texas. The rules of the Commission are found in Title 4, Texas Administrative Code,
Chapters 31 through 60.

During fiscal year 2013, TAHC adopted new animal disease traceability rules, published as a separate chapter to enhance program transparency and to incorporate elements in the adopted federal ADT rule. Chapter 50: Animal Disease Traceability went into effect on Monday, October 7, 2013. The rule specifically establishes the requirements for approved tagging sites. All facilities such as livestock markets receiving certain classes of livestock without official identification must be designated as an approved tagging site or be affiliated with one.

The Commission adopted a new section in Chapter 50: Animal Disease Traceability, Cattle Identification and became effective on Tuesday, February 4, 2014. This amendment establishes identification requirements for adult cattle being sold within the state of Texas. The rule states that all adult breeding cattle, except cattle going directly to slaughter, shall be permanently identified within seven days of change of ownership. Untagged adult cattle have seven days after purchase to be delivered to a slaughter facility, resold through a livestock market, or have acceptable permanent official identification applied. Slaughter type cattle that will be put on feed prior to slaughter shall also be permanently identified within seven days of purchase.

Additionally, if any changes are made to the state animal disease traceability rules, they will be structured for seamless compliance with the federal ADT rule.

4.7.4 Staffing

TAHC personnel are needed to perform essential job duties required to carry out program objectives. The animal disease traceability department is responsible for administering/overseeing the program. Staff throughout the agency provide support for the program.

Personnel needed to implement program are (at minimum):

- Program Coordinator
- Program field support specialist – 1
- Office administrative support staff – 9
- Part-time support from staff veterinarians, field inspectors, region admins, and IT support specialists

4.7.5 Projected Budget requirements The projected total program costs:

</table>

TAHC’s state budget cannot solely financially support the ADT program and relies on funding through federal cooperative agreements. Any reduction in cooperative agreement awarded funding will hinder the potential advancement of animal disease traceability.

4.7.6 Outreach

TAHC will continue to promote and educate Texas livestock industry and stakeholders about advancing animal disease traceability. Outreach efforts are made on a daily basis by our field, office, and communications staff. ADT staff is available by phone, email, and in person to answer questions. TAHC maintains a detailed ADT webpage that is reviewed and updated quarterly, with vital updates made as needed. TAHC’s Public Information Office publishes ADT focused news releases, electronic newsletters, handouts, fact sheets, brochures, and regularly posts to social media. TAHC field staff regularly provide in-person contact at livestock markets, special sales, rodeos, exhibitions, special events, make ADT presentations and work information booths at industry meetings and conferences.

Successful implementation of any plan to advance animal disease traceability cannot be achieved without outreach to constituents primarily affected by the plan.

4.7.6.1 Accredited veterinarians

Accredited veterinarians are instrumental to the traceability framework focusing on the identification and interstate movement of livestock, as well as transitioning to electronic data capture and submission of electronic animal health records.

- The plan to inform accredited veterinarians of the ADT program, requirements, plans for implementation and advancement will utilize various forms of media, such as: press releases, electronic
newsletters, handouts, fact sheets, brochures, social media, agency website, agency email, mass mail outs, and attend regional conventions and meetings.

- Since fiscal year 2019, TAHC has conducted extensive outreach and education efforts to accredited veterinarians to provide information on how to transition to electronic official identification, electronic data capture equipment, and reporting requirements including how to become an AIN device manager.
- TAHC plans to enhance and promote the use of electronic ICVIs, vaccination and test records by educating veterinarians on the ease of use and benefits.
- A continuing education effort will be put in place to ensure all parties responsible for collecting and entering data are sufficiently trained and supported. TAHC’s data accuracy monitoring program will continue to provide accountability and data quality assurance.
- The accredited veterinarian will continue to provide and have official identification devices available for producers.

4.7.6.2 Livestock marketing facilities/ Slaughter Plants
Livestock marketing facilities continue to be a vital collection point for traceability information.
- In addition to regular in-person contact and communication provided by agency field staff, TAHC uses various forms of media, such as, press releases, electronic newsletters, handouts, fact sheets, brochures, social media, agency website, agency email, mass mail outs, and attendance at regional conventions and meetings, help address outstanding concerns from livestock markets.

4.7.6.3 Industry as a whole
Implementation of any plan to advance animal disease traceability impacts a variety of constituents, likely none more so than industry itself.
- The industry will be informed of the ADT program and advancement plan by utilizing various forms of media, such as, press releases, electronic newsletters, handouts, fact sheets, brochures, social media, agency website, agency email, mass mail out, and material presented at conventions and meetings.
- TAHC plans to promote the ease of use, benefits,
and increase acceptance of electronic official identification devices and electronic ICVIs.

- Industry representatives serving on the advisory committee will continue to educate and share plan implementation to their constituents.

4.8 Monitoring and reporting interstate movement activity

The traceability framework is focused on interstate movement and the accompanying ICVI or similar documentation for that movement.
- ICVIs will be monitored for data quality and compliance.
- The number of animals and the number of shipments that move interstate will be monitored and verified by a monthly inspection of all paper and electronic ICVIs. The number of documents and animals are calculated at the end of each month by program records and information technology staff.
- The number of paper ICVIs, electronic ICVIs, and category II accredited veterinarians using electronic ICVIs are calculated at the end of each month by TAHC staff.
- The volume of official identification devices issued by TAHC is compiled by ADT staff and is reported in cooperative quarterly reports.

4.9 Compliance and enforcement of traceability regulations

TAHC office staff monitors premises registrations, tag distributions, tag allocation records, disease program documents, movement records, and submitted complaints for potential compliance issues. TAHC field staff monitors operations, animals, animal movements, documents, and submitted complaints for potential compliance issues. All compliance issues are reported to TAHC’s Legal Department to investigate any alleged violations and follow up enforcement actions. Possible enforcement actions include warning letters, administrative penalties, and criminal actions filed with local prosecuting authorities. TAHC records and report the number of investigations and enforcement actions to our AVIC and in the quarterly ADT Enforcement Action reports.

Additionally, when TAHC receives returned NUES tags from a distribution partner, we will conduct a comparison of all tags issued, reported, and returned to ensure accountability for all tags. Also, when an accredited vet places multiple orders for RFID tags, TAHC will verify that the tag allocation records for previous orders are being reported properly, prior to placing additional orders.

V. TRACEABILITY IMPLEMENTATION

5.1 Ranking of priorities for advancement
1) Improvement and increase of electronic data capture and retrieval of
traceability information
2) Outreach and marketing efforts
3) LID and PIN Assignments
4) Tag Distributions
5) Data collection and reporting data into appropriate systems
6) Data entry of backlogged vaccination and testing records
7) Monitor ICVI data quality and compliance
8) Pilot projects with industry for testing new technology

5.2 Implementation of objectives and planned activities

• Year 1
  - Continue LID, PIN, and Flock ID assignments
  - Continue tag distribution process
  - Continue data collection and reporting
  - Input data into appropriate systems
  - Integrate surveillance and traceability legacy data
  - Data entry of backlogged vaccination and testing records
  - Enhance IT infrastructure
  - Conduct National Priority Trace activities
  - Monitor ICVI data quality and compliance
  - Continue outreach and marketing efforts
  - Continue improvements of a system for electronic capture ADT data
  - Promote the use of electronic data capture and electronic records
  - Compliance and enforcement actions

• Year 2
  - Continue LID, PIN, and Flock ID assignments
  - Continue tag distribution process
  - Provide approved manufacturers’ information for purchasing of official identifications devices to producers and industry
  - Implementation of transition to electronic id
  - Continue outreach and education efforts
  - Promote the use of electronic data capture and electronic records
  - Continue data collection and reporting
  - Input data into appropriate systems
  - Integrate surveillance and traceability legacy data
  - Data entry of backlogged vaccination and testing records
  - Enhance IT infrastructure.
  - Improve retrieval of available traceability information
  - Conduct National Priority Trace activities
  - Monitor ICVIs for data quality and compliance
  - Enhancement of an electronic data capture system of CVI data
  - Compliance and enforcement actions

• Year 3
  - Continue Flock ID, LID and PIN assignments
  - Continue tag distribution process
- Continue to provide approved manufacturers’ information for purchasing of official identifications devices to producers and industry
- Continue implementing the transition to electronic id
- Continue outreach and education efforts
- Continue data collection and reporting
- Input data into appropriate systems
- Integrate surveillance and traceability legacy data
- Enhance IT infrastructure
- Improve retrieval of available traceability information
- Conduct National Priority Trace activities
- Monitor ICVI data quality and compliance
- Compliance and enforcement actions
- Enhancement of an electronic data capture system of CVI data
- Implementation of advancement activities to support a standardized electronic system for traceability data and uniform official ID
