Farm Bill

Last Modified:

The Farm Bill, a comprehensive piece of legislation, has outlined U.S. agricultural and food policies for nearly 100 years. Every 5 years, Congress develops and passes a Farm Bill to strengthen wide-ranging programs, including disaster assistance, international trade, crop insurance, conservation, and other crucial areas.

With a framework of support, the Farm Bill enables APHIS to start, maintain, and expand programs as well as distribute funds to farmers, producers, cooperators, and

Tribal nations—all to help protect our Nation's agricultural resources.

2018 Farm Bill At-A-Glance

The 2018 Farm Bill created several new APHIS programs that benefit the Nation's farmers and ranchers. Specifically, it:

- Provided funding to start the National Animal Vaccine and Veterinary Countermeasures Bank and the [National Animal Disease Preparedness and Response Program](#)
- Expanded funding for the [National Animal Health Laboratory Network](#)
- Provided \$75 million for a joint feral swine eradication and control pilot program administered by NRCS and APHIS.
- Required APHIS to develop a [list of animal and plant pests and diseases representing the gravest threat to U.S. agriculture](#) and comprehensive strategic response plans to ensure that Federal and State governments are prepared to address them

APHIS Programs and Initiatives Started by Farm Bills

Since 2008, Farm Bills have started, expanded, and made permanent several APHIS programs.

[Feral Swine](#)

Funding for the Feral Swine Eradication and Control Pilot Program is split between APHIS and USDA's Natural Resources Conservation Service. Together, we are developing projects that build on APHIS' existing [feral swine damage management program](#) in those States where feral swine populations are the highest or most dense.

[National Animal Disease Preparedness and Response](#)

Through the National Animal Disease Preparedness and Response Program, APHIS offers funding to States, Tribes, producer organizations, universities, and others nationwide for projects that help them implement biosecurity measures, enhance their ability to quickly detect and control disease outbreaks, and put in place mechanisms to ensure an effective and efficient emergency response.

[National Animal Health Laboratory Network](#)

The National Animal Health Laboratory Network is a nationally coordinated network of Federal, State, and university laboratories. These laboratories provide veterinary diagnostic testing to detect foreign animal diseases and other biological threats to the nation's food animals, thus protecting animal health, public health, and the U.S. food supply.

[National Animal Vaccine and Veterinary Countermeasures Bank](#)

For high consequence animal diseases like foot-and-mouth disease, it's important to have an effective insurance policy in the event of an outbreak. The new U.S.-only vaccine bank—a concept APHIS officials have long discussed with stakeholders and industry—allows APHIS to stockpile animal vaccine and related products to use in the event of an outbreak of foot-and-mouth disease or other serious foreign animal diseases.
